Station

# Soil Survey of Lander County, Nevada, North Part (Volume I)

# How To Use This Soil Survey

## General Soil Map

The general soil map, which is the color map preceding the detailed soil maps, shows the survey area divided into groups of associated soils called general soil map units. This map is useful in planning the use and management of large areas.

To find information about your area of interest, locate that area on the map, identify the name of the map unit in the area on the color-coded map legend, then refer to the section **General Soil Map Units** for a general description of the soils in your area.

## Detailed Soil Maps

The detailed soil maps follow the general soil map. These maps can be useful in planning the use and management of small areas.

To find information about your area of interest, locate that area on the **Index to Map Sheets**, which precedes the soil maps. Note the number of the map sheet, and turn to that sheet.

Locate your area of interest on the map sheet. Note the map unit symbols that are in that area. Turn to the **Index to Map Units** (see Contents), which lists the map units by symbol and name and shows the page where each map unit is described.

NOTE: Map unit symbols in a soil survey may consist only of numbers or letters, or they may be a combination of numbers and letters.

The **Summary of Tables** shows which table has data on a specific land use for each detailed soil map unit. See **Contents** for sections of this publication that may address your specific needs.

---

This soil survey is a publication of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other federal agencies, state agencies including the Agricultural Experiment Stations, and local agencies. The Soil Conservation Service has leadership for the federal part of the National Cooperative Soil Survey.

Major fieldwork for this soil survey was completed in 1983. Soil names and descriptions were approved in 1985. Unless otherwise indicated, statements in this publication refer to conditions in the survey area in 1983. This survey was made cooperatively by the Soil Conservation Service; the United States Department of the Interior, Bureau of Land Management; and the University of Nevada, Agriculture Experiment Station. It is part of the technical assistance furnished to the Lander County Conservation District.

Soil maps in this survey may be copied without permission. Enlargement of these maps, however, could cause misunderstanding of the detail of mapping. If enlarged, maps do not show the small areas of contrasting soils that could have been shown at a larger scale.

All programs and services of the Soil Conservation Service are offered on a nondiscriminatory basis, without regard to race, color, national origin, religion, sex, age, marital status, or handicap.

**Cover: A typical landform sequence in Lander County, Nevada, North Part. This is along Trout Creek in the Shoshone Range south of Battle Mountain. In the foreground, Doowak and Veta soils are dominant on the inset fans. In the near middleground, Oxcorel, Dun Glen, and Whirlo soils are dominant on fan skirts and low fan piedmont remnants. In the far middleground, Tomera, Snapp, and Whirlo soils are on a fan piedmont remnant. In the background, Glean, Locane, Pernty, and Sumine soils are dominant on the mountains.**

# Foreword

---

This soil survey contains information that can be used in land-planning programs in Lander County, Nevada, North Part. It contains predictions of soil behavior for selected land uses. The survey also highlights limitations and hazards inherent in the soil, improvements needed to overcome the limitations, and the impact of selected land uses on the environment.

This soil survey is designed for many different users. Farmers, ranchers, foresters, and agronomists can use it to evaluate the suitability of the soil and the management needed for maximum food and fiber production. Planners, community officials, engineers, developers, builders, and home buyers can use the survey to plan land use, select sites for construction, and identify special practices needed to ensure proper performance. Conservationists, teachers, students, and specialists in recreation, wildlife management, waste disposal, and pollution control can use the survey to help them understand, protect, and enhance the environment.

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are shallow to bedrock. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

These and many other soil properties that affect land use are described in this soil survey. Broad areas of soils are shown on the general soil map. The location of each soil is shown on the detailed soil maps. Each soil in the survey area is described. Information on specific uses is given for each soil. Help in using this publication and additional information are available at the local office of the Soil Conservation Service or the Cooperative Extension Service.

Location of the survey area in Nevada.

# Soil Survey of Lander County, Nevada, North Part

---

By Carole E. Jett, Soil Conservation Service

Fieldwork by George J. Staidl, Michael T. Jackson, and Barry J. Strickler, Soil Conservation Service; Michael J. Zielinski and Steven Mellington, Bureau of Land Management; and Soil and Land Use Technology, Inc., under contract with the Bureau of Land Management

United States Department of Agriculture, Soil Conservation Service  
In cooperation with  
United States Department of the Interior, Bureau of Land Management, and University of Nevada, Agriculture Experiment Station

LANDER COUNTY, NORTH PART, is in the north-central part of Nevada. The survey area contains 1,588,530 acres, or 2,482 square miles. Battle Mountain is the only town located in the survey area.

The survey area is bounded on the west by Pershing and Humboldt Counties, on the north by Elko County, and on the east by Eureka County. The northeast part of the county is included in the Tuscarora Mountain Area soil survey.

The survey area consists of numerous north-south oriented mountain ranges and valleys. Elevations average 8,500 feet in the mountains and 4,500 feet in the valleys. The Humboldt River flows east to west across the northern part of the survey area. The Reese River flows south to north and bisects the central part.

The Bureau of Land Management administers all public land in the survey area.

Descriptions, names, and delineations of soils in this soil survey do not fully agree with those on soil maps for adjacent survey areas. Differences are the result of better knowledge of soils, modifications in series concepts, intensity of mapping, or the extent of soils within the survey.

## General Nature of the Survey Area

This section gives general information about the survey area. It briefly discusses history, water supply, industries and transportation, drainage, geology, and climate.

## History

The first explorers in Lander County were members of the Peter Skeen Ogden expedition in 1828. Ogden and others worked their way upstream on the Humboldt River bottom lands, trapping beavers and other furbearers. In 1841, the first party of migrants on its way to California came into the area. By 1844, the winding course of the Humboldt River became known as the "Humboldt Trail," the main thoroughfare for the westward migration.

Development began in 1869 with the completion of the transcontinental railroad, which opened the area to both eastern and western markets. The town of Battle Mountain developed as a railroad station and terminal for the freight and stage roads to the south. About this time the numerous mines caused the area to boom. During the 1890's, an expanding cattle industry replaced mining as the economic base.

After the discovery of barite, gold, and copper, mining again became the economic base. Farming, both livestock and crop production, diversifies the local economy.

## Water Supply

Wells and streams supply irrigation water. In the arid valleys, wells are used to irrigate alfalfa and small grains. Stream water is used in irrigating native meadows and pastures along drainageways. At the

higher elevations, numerous small springs, seeps, and small, intermittent streams provide adequate water sources for livestock and wildlife.

Battle Mountain obtains its water supply from deep underground wells. Rural areas also fill their domestic water needs from wells or dependable springs.

## Industries and Transportation

The major industries in the survey area are mining, ranching, and irrigated crop production.

Mining provides most of the employment in the area. Gold and barite are the major minerals mined, and copper and turquoise make up a smaller portion (25).

The ranches are mainly cow-calf operations that sell the calves in fall.

Irrigated crops are produced mostly in the Middle Reese River Valley, Antelope Valley, and North Battle Mountain areas. The main crops are alfalfa hay, alfalfa seed, and small grains.

The Southern Pacific and Western Pacific Railroads parallel the Humboldt River across the northern part of the survey area. The minerals mined in the area are shipped mostly by rail.

Interstate 80 runs east-west across the northern part of the survey area. State Highway 305 runs north-south between Battle Mountain and Austin, Nevada. Numerous dirt roads or jeep trails, which are accessible in summer and fall, cross the survey area.

## Drainage

The Reese River drains a large part of Lander County, North Part. It is an intermittent axial stream that flows northward through the survey area to join the Humboldt River near Battle Mountain. Rock Creek drains the northeastern corner of the survey area and joins the Humboldt River northeast of Battle Mountain. The Humboldt River flows westward and then northwestward across the northern part of the county and terminates in the Lahontan Basin at the Humboldt Sink.

The rest of the survey area consists of bolsons called Buffalo and Grass Valleys. These are basins that intermittent streams internally drain. These streams flow only in spring or during localized thunderstorms in summer and terminate at a central playa within these valleys.

## Geology

The geology of the survey area is variable and complex.

Most outcrops of pre-Tertiary rocks in this area

consist of sedimentary and metasedimentary rocks, mainly interbedded chert, shale, argillite, greenstone, and quartzite. These rocks dominate the Augusta, Battle Mountain, and most of the Shoshone and Toiyabe Ranges. Typically, Atlow, Linrose, Packer, and Slaven soils formed in these rocks.

The volcanic rocks in this area include rhyolitic and andesitic tuffs, welded ash-flow tuffs, basalt, and related pyroclastic rocks. Most of these were laid down during the Miocene and Pliocene Epochs. These rocks are dominant in the Sheep Creek Range and Fish Creek Mountains and are in small areas in the central Shoshone and Toiyabe Ranges. Typically, Colbar, Hooplite, Laped, and Walti soils formed in these rocks.

The oldest valley fill material is sediment of Tertiary age. It occurs along the Middle Reese River Valleys, in the Fish Creek Basin, and as old alluvial divides between the Carico and Reese Valleys and the Grass and Crescent Valleys. This valley fill, which is partially lithified, typically consists of siltstone, sandstone, conglomerate, and some beds of volcanic ash. Typically, Genaw, Perlur, Puett, and Tessfive soils formed in these deposits.

The fan piedmont slopes in the valleys are made up of older Quaternary alluvium with influence from loess and high amounts of volcanic ash. This alluvium is parent material of Beoska, Broyles, Tenabo, Whirlo, and other soils.

The youngest material in the area consists of recent alluvium along the flood plains of the Reese and Humboldt Rivers and on the lower valley floors. Typically, Batan, Ocala, Sonoma, and Wendane soils formed in this material.

## Climate

Prepared by the National Climatic Data Center, Asheville, North Carolina.

In Lander County, summers are hot, especially at lower elevations, and winters are cold. Rangeland takes in most of the survey area. At lower elevations precipitation is normally light during all months of the year. At higher elevations it is much greater and snow accumulates to considerable depths. Much of the snowmelt irrigates crops in nearby valleys. Climatic data for Austin included here closely resemble those for the southern part of the survey area and for areas at higher elevations.

Table 1 gives data on temperature and precipitation for the survey area, as recorded at Austin and Battle Mountain, Nevada, for the period 1951-78. Table 2 shows probable dates of the first freeze in fall and last freeze in spring. Table 3 provides data on length of the growing season.

In winter, the average temperature is 31 degrees F. The average daily minimum temperature is 19 degrees F. The lowest temperature on record, -30 degrees F, occurred at Battle Mountain on December 9, 1972. In summer, the average temperature is 68 degrees F. The average daily maximum temperature is about 86 degrees F. The highest temperature, 109 degrees F, was recorded at Battle Mountain on July 27, 1975.

Growing degree days, shown in table 1, are equivalent to "heat units." Beginning in spring, growing degree days accumulate by the amount that the average temperature each day exceeds a base temperature (40 degrees F). The normal monthly accumulation is used to schedule single or successive plantings of a crop between the last freeze in spring and the first freeze in fall.

The total annual precipitation is 14 inches at Austin and 7 inches at Battle Mountain. Of this, 60 percent usually falls in April through September, which includes the growing season for most crops. The heaviest 1-day rainfall during the period of record was 2.27 inches at Battle Mountain on October 12, 1963. Thunderstorms occur on about 12 days each year.

Average seasonal snowfall is 40 inches at Austin and 24 inches at Battle Mountain. The greatest snow depth at any one time during the period of record was 23 inches at Austin. On the average, 31 days at Austin and 14 days at Battle Mountain have at least 1 inch of snow on the ground, but the number of such days varies greatly from year to year. Every few years in the survey area a blizzard strikes with high winds and drifting snow. During blizzards, snow remains on the ground for many weeks, even at lower elevations, and livestock suffer.

The average relative humidity in midafternoon is about 30 percent. Humidity is higher at night, and the average at dawn is about 65 percent. The sun shines 85 percent of the time possible in summer and 60 percent in winter. The prevailing wind is from the west. Average windspeed is highest in spring and averages 9 miles per hour.

## How This Survey Was Made

This survey was made to provide information about the soils and miscellaneous areas in the survey area. The information includes a description of the soils and miscellaneous areas and their location and a discussion of the suitability, limitations, and management of the soils for specified uses. The fieldworkers mainly in the northern half of the survey area were soil scientists of the Soil Conservation Service and the Bureau of Land Management. Those mainly in the southern half of the area were soil scientists of Soil and Land Use

Technology, Inc., under contract to the Bureau of Land Management.

Some discrepancies were recognized when joining the Tuscarora Mountain Soil Survey Area. This older soil survey was completed within the framework of knowledge and standards that existed at the time. Also, the acreage of soils involved along the join is so small that no purpose was served to extend the delineations into this area. Because of a better understanding of soils and an improved methodology in mapping techniques, some of the soil names, map unit components, or physiographic positions may not be exactly the same. These advancements should have little or no effect in the use of this survey in managing soils.

The soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They dug many holes to study the soil profile, which is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unmodified parent material in which the soil formed. The unmodified material is devoid of roots and most other living organisms, and biological activity has not changed it.

The soils and miscellaneous areas in the survey area are in orderly patterns related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil or miscellaneous area is associated with a particular kind or segment of the landscape. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landscape, a soil scientist develops a concept or model of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Individual soils on the landscape commonly merge gradually into one another as their characteristics gradually change. To construct an accurate map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted color, texture, size, and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining

**Figure 1.—The major physiographic parts of an internally-drained intermontane basin, or bolson: the piedmont slope (P) and the basin floor or, more specifically, the bolson floor (F). The schematic diagram shows part of an elongated bolson; bounding mountain ranges are on the near and far sides of the bolson and hills cut off the far end. The dotted lines are drainageways and suggest positions of major landforms. Neither the playa nor the drainageways of the floor are shown.**

their properties, the soil scientists assigned the soils to taxonomic classes.

Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy is the system of taxonomic classification used in the United States. It is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. The soil scientists classified and named the soils in the survey area. Then they compared the individual soils with similar soils in the same taxonomic class in other areas. They did so to confirm data and assemble additional data based on experience and research.

Some typical pedons described are located in the southern part of Lander County, outside of the survey area. This situation exists because a large part of Lander County was mapped under a separate private contact. Soils that were already mapped at that time

and that were not mapped again within the survey area have the typical pedon description already available for those soils regardless of which survey area they are in. The affected typical pedon description has a statement under the heading "Type location" indicating its origin outside of the survey area. In some pedons, taxa are in map units that are similar but not identified within this survey area.

While the soil survey was in progress, samples of some of the soils in the area were collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties. In so doing, they determine the expected behavior of the soils under different uses. Interpretations for all of the soils were field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local

needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that in most years a given soil will have a high water table within certain depths. But they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

Soil scientists located and identified the significant natural bodies of soil in the survey area. Then they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

## Soil Landscapes

In this soil survey, the mapped areas generally represent associations of two or three soil components as well as other included soils of small extent. Soil patterns commonly coincide with landforms and physiographic positions. In the section "Detailed Soil Map Units," descriptive terms are used to identify where

Figure 2.—The semibolson displays the effects of several cycles of dissection and deposition. The major landforms are ballenas (B), the fan piedmont (comprising several levels, or ages, of fan remnants) (P), the fan skirt (S), an axial stream terrace (T), and an axial stream flood plain (F). Alluvial fans are not distinguished from the fan piedmont. Inset fan (I) component landforms are located between fan remnants, and mountains bound the basin on two sides.

**Figure 3.—A schematic diagram of a fan skirt (S) that merges along its lower boundary with a basin floor (BF). What formed the fan skirt were coalescing alluvial fans originating at gullies cut in a dissected fan piedmont (P) and debouching inset fans (I) of the fan piedmont. The erosional fan piedmont remnants and mouths of the inset fans form the upper boundary of the fan skirt. The fan skirt is the same age surface as the inset fans but is younger than the relict summits of the fan remnants. It may be the same age or younger than the basin-floor surface but, as shown here, is younger because alluvium of the fan skirt overlaps the basin-floor surface.**

the individual soil components are on the landscape. While landforms and soils are related, they are not mutually exclusive. Individual soil series commonly occur on more than one component landform.

In this survey area, the landforms are classified and defined according to Peterson (22). The landform elements are described and defined in a manner precise enough for one to visualize where soils occur in relation to each other. The intent of this section is not to define all of the landform terms but to briefly define the main geomorphic surfaces in the survey area. All landform terms are defined in the Glossary.

The landforms of the intermontane basins are first grouped into two general classes, bolson (fig. 1) and semibolson (fig. 2). Within these two groups are three major physiographic parts identified in the Basin and Range Province (fig. 3). These are the bounding mountains, the piedmont slope, and the basin floor. The bounding mountains are not well defined; the slope components are identified and the hills are separated

from the mountains. The definition of a hill is a highland mass that rises less than 1,000 feet above the surrounding boundaries. The piedmont slope and basin floor are gross topographic forms that slope from the bounding mountains down to a central playa.

The shapes, genetic relationships, and geographic scales of the topography seen in the field are used to classify the landforms. The two general classes, bolson and semibolson, are successively divided into smaller and genetically more homogeneous classes (charts 1 and 2). The broadest class is major physiographic parts, each of which is made up of several genetically related major landforms. They in turn may be comprised of several more genetically related component landforms. The component landforms are about the smallest single units that one would consider in combined terms of their form, constituent materials, and genetic history. Some component landforms, such as fan piedmont remnants, have distinctive topographic parts with quite different geomorphic histories. The

CHART 1.—CLASSIFICATION OF BOLSON LANDFORMS

fourth class, landform elements, recognizes these parts. The fifth class, slope components, includes those landform elements that are erosional surfaces to be subdivided into their genetic components.

For soil survey applications, it would be most convenient if somewhere in the hierarchy the landform classes corresponded to individual soils. The very purposes of a landform classification, however, prevent such classes being gathered in a single category.

In the section "General Soil Map Units," landscape

positions are given for each major component. These generally are major physiographic parts, major landforms, or component landforms. In the section "Detailed Soil Map Units," broad landscape positions are given for each map unit in the map unit setting. These are major physiographic parts or major landforms. More detailed landscape positions are given for each major component and contrasting inclusion. These generally are component landforms, landform elements, or slope components.

# General Soil Map Units

---

The general soil map at the back of this publication shows broad areas that have a distinctive pattern of soils, relief, and drainage. Each map unit on the general soil map is a unique natural landscape. Typically, a map unit consists of one or more major soils or miscellaneous areas and some minor soils or miscellaneous areas. It is named for the major soils or miscellaneous areas. The soils or miscellaneous areas making up one unit can occur in other units but in a different pattern.

A perspective of how the general soil map units relate to the various broad landscapes is illustrated in figures 4 and 5. The map units in figure 4 are representative of those on a bolson that is an internally drained intermontane basin. The map units in figure 5 are representative of those on a semibolson that is an externally drained intermontane basin.

The general soil map can be used to compare the suitability of large areas for general land uses. Areas of suitable soils or miscellaneous areas can be identified on the map. Likewise, areas that are not suitable can be identified.

Because of its small scale, the map is not suitable for planning the management of a farm or field or for selecting a site for a road or building or other structure. The soils in any one map unit differ from place to place in slope, depth, drainage, and other characteristics that affect management.

The 22 general map units in this survey have been grouped into four general kinds of landscape for broad interpretive purposes. Each of the broad groups and the map units in each group are described in the following pages.

## Map Unit Descriptions

### Areas Dominated by Soils on Bolson and Semibolson Floors

There are five map units in this group. The soils and miscellaneous areas in the group are dominantly on basin floors, axial stream flood plains, alluvial flats, lake plains, and their remnants (22). Elevations range from

4,450 feet in the northern part of the survey area to 5,700 feet in the southern part. The average annual precipitation is 5 to 8 inches, the average annual air temperature is 46 to 52 degrees F, and the frost-free season is 100 to 120 days.

The soils in this group are level to gently sloping and very deep and have dominantly stratified silty textured profiles. Most of the soils are salt and sodium affected to some degree.

The soils form drainage catenas across the valley floors. The poorly drained, frequently flooded soils exhibit little or no profile development and are on the youngest, actively aggrading geomorphic surfaces. The somewhat poorly drained, occasionally flooded soils exhibit minimal profile development. They are on young, semistable geomorphic surfaces. The moderately well drained and well drained, nonflooded soils exhibit limited profile development and are on slightly older, yet still Holocene, stable geomorphic surfaces.

#### 1. Playas

This map unit occurs on level basin floors in the sink areas of Buffalo and Grass Valleys. The areas are barren of vegetation. Water is ponded in these areas in the spring of most years following spring runoff.

This map unit makes up about 1 percent of the survey area.

This miscellaneous area consists of nearly impermeable lacustrine sediments with a veneer of eolian sand.

This map unit is not suited to most uses.

#### 2. Wendane-Gund-Batan

*Level and nearly level, very deep, somewhat poorly drained and moderately well drained soils on alluvial flats, alluvial flat remnants, lake plains, and lake plain terraces*

This map unit is in the lower part of Grass Valley bordering the playa. The vegetation is mainly basin wildrye, alkali bluegrass, inland saltgrass, black greasewood, and rubber rabbitbrush on Wendane soils;

Figure 4.—Typical relationship of general soil map units and landscapes: Playas (1); Buffaran-Allor-Chiara (11); Puett-Wieland-Genaw (14); and Itca-Reluctan-Punchbowl (20).

basin wildrye, black greasewood, and basin big sagebrush on Gund soils; and bottlebrush squirreltail, shadscale, bud sagebrush, and black greasewood on Batan soils.

This map unit makes up about 1 percent of the survey area.

The Wendane series consists of somewhat poorly drained soils on alluvial flats and lake plains. These soils have a thin, light-colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. They are strongly salt and sodium affected. They are subject to common flooding.

The Gund series consists of somewhat poorly drained soils on lake plain terraces. These soils have a thin, light-colored, medium textured surface layer and a profile that is dominantly medium textured and moderately fine textured in the upper part and fine textured lake sediments in the lower part. They are strongly salt and sodium affected. They are subject to rare flooding.

The Batan series consists of moderately well drained soils on alluvial flat remnants. These soils have a thin, light-colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. They are strongly salt and sodium affected. These soils are not subject to flooding.

Of minor extent in this unit are McConnel and Tulase soils. McConnel soils are somewhat excessively drained, stratified, very gravelly and extremely gravelly, moderately coarse textured soils on offshore bars. They support Thurber needlegrass, bluebunch wheatgrass, and Wyoming big sagebrush. Tulase soils are well drained, medium textured soils in lagoons. They support Thurber needlegrass, bluebunch wheatgrass, and Wyoming big sagebrush. These soils are not salt or sodium affected and are not subject to flooding.

This unit is used for livestock grazing and wildlife habitat. The main limitations are the strongly salt- and sodium-affected soil profiles and the low average annual precipitation.

### 3. Sonoma-Rixie-Paranat

*Level and nearly level, very deep, poorly drained soils on axial stream flood plains*

This map unit is in the north part of the survey area along the Humboldt River meander belt. The vegetation is mainly basin wildrye, creeping wildrye, and sedges and small areas of alkali sacaton, alkali bluegrass, and inland saltgrass. Flooding by the Humboldt River is common and occurs at least one or more springs in five for a duration of 2 days to 1 month.

This map unit makes up about 3 percent of the survey area.

The Sonoma soils have a thick surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. These soils are salt free or slightly salt and sodium affected in the surface

layer but are not salt or sodium affected throughout the rest of the profile.

The Rixie soils have a thick, dark colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. These soils are not salt or sodium affected.

The Paranat soils have a thick, dark colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. These soils are not salt or sodium affected.

Of minor extent in this map unit are Ocala, Batan, and Rose Creek soils. Ocala soils are somewhat poorly drained, subject to occasional flooding, and medium textured. They are on alluvial flats. They are strongly salt and sodium affected and support basin wildrye and black greasewood. Batan soils are moderately well drained, not subject to flooding, and medium textured.

Figure 5.—Typical relationship of general soil map units and landscapes: Sonoma-Rixie-Paranat (3); Orovada-Broyles-Shabliss (7); Buffaran-Allor-Chiara (11); Bioya-Chiara-Cortez (12); Robson-Akerue-Buffaran (16); Sumine-Chen-Rock outcrop (19); and Quarz-Walti-Glean (21).

They are on alluvial flat remnants. They are strongly salt and sodium affected and support bottlebrush squirreltail, black greasewood, and shadscale. Rose Creek soils are somewhat poorly drained, subject to occasional flooding, and medium textured. They are in high flood plain positions. They are strongly salt and slightly sodium affected and support basin wildrye, streambank wheatgrass, and big sagebrush.

This map unit is used for meadow hay, winter grazing, and wildlife habitat. If irrigation water is available, this unit is suitable for native hay or improved pasture. It is moderately suitable for irrigated cropland, livestock grazing, and wildlife habitat. The main limitations are the flooding and seasonal high water table.

This unit is poorly suited to homesite development because of flooding, the seasonal high water table, low bearing strength, and slow percolation rate.

#### 4. Wendane-Batan-Bubus

*Level and nearly level, very deep, somewhat poorly drained, moderately well drained, and well drained soils on alluvial flats and alluvial flat remnants*

This map unit is on broad valley bottoms in the Buffalo, Carico, Crescent, and Reese River Valleys. The vegetation is mainly basin wildrye, black greasewood, and rubber rabbitbrush on Wendane soils and bottlebrush squirreltail, black greasewood, and shadscale on Batan soils.

This map unit makes up about 11 percent of the survey area.

The Wendane series consists of somewhat poorly drained soils on alluvial flats. These soils have a thin, light-colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. They are strongly salt and sodium affected. These soils are subject to common flooding during 1 or more years in 10 for a period of 2 days to 1 month or will pond water for long periods.

The Batan series consists of moderately well drained soils on alluvial flat remnants. These soils have a thin, light-colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. They are strongly salt and sodium affected. Some of these soils are subject to common flooding at least 1 year in 10 for a period of 2 days to 1 month or will pond water for long periods.

The Bubus series consists of well drained soils on alluvial flat remnants. These soils have a thin, light-colored surface layer and are dominantly stratified, moderately coarse textured and medium textured throughout the profile. They are strongly salt and sodium affected. These soils are not subject to flooding.

Of minor extent in this map unit are Reese and Broyles soils. Reese soils are poorly drained, subject to occasional flooding, and moderately fine textured. They are on flood plain remnants or drainage channels. They are strongly salt and sodium affected and support basin wildrye and black greasewood. Broyles soils are well drained, not subject to flooding, and moderately coarse textured. They are on fan skirts. They are salt free to slightly salt affected in the upper part of the profile and slightly to strongly salt and sodium affected in the lower profile and support bottlebrush squirreltail and shadscale.

This map unit is used for livestock grazing, wildlife habitat, irrigated cropland, and homesite development. The main limitations to use for livestock grazing and as wildlife habitat are the low average annual precipitation and the strongly salt- and sodium-affected soil profiles.

Batan and Bubus soils are suitable for crops, pasture, and hay, if irrigation water is available and reclamation practices are used. Batan soils are poorly suited to homesite development; the main limitations are the slow percolation rates and low bearing strength. Bubus soils are moderately suited to homesite development; the main limitation is the moderate percolation rate in the substratum.

#### 5. Tweba-Wendane

*Level to gently sloping, very deep, somewhat poorly drained and moderately well drained soils on axial stream flood plains and alluvial flats*

This map unit is in the north part of the survey area along Rock Creek. The vegetation is mainly basin wildrye, basin big sagebrush, and black greasewood on Tweba soils and basin wildrye and black greasewood on Wendane soils.

This map unit makes up less than 1 percent of the survey area.

The Tweba series consists of nearly level to gently sloping soils on incised axial stream flood plains. Stream channel entrenchment has altered the drainage to moderately well drained. These soils have a thin surface layer and dominantly stratified, moderately coarse textured and medium textured profiles. They are not salt or sodium affected. These soils are subject to rare flooding.

The Wendane series consists of somewhat poorly drained soils on nearly level alluvial flats. These soils have a thin, light-colored surface layer and are dominantly stratified medium textured and moderately fine textured throughout the profile. They are strongly salt and sodium affected. These soils are subject to occasional flooding.

Of minor extent in this unit are Doowak and Orovada

soils. Doowak soils are somewhat excessively drained, very gravelly coarse textured soils on gently sloping inset fans. They support basin wildrye, basin big sagebrush, and black greasewood. Orovada soils are well drained, moderately coarse textured and medium textured soils on nearly level fan skirts. These soils support Thurber needlegrass, bluebunch wheatgrass, and Wyoming big sagebrush. They are not salt or sodium affected or subject to flooding.

This unit is used for livestock grazing and wildlife habitat.

### **Areas Dominated by Soils on Fan Piedmonts and Fan Skirts**

Seven map units are in this group. The soils in this group are dominantly on fan piedmonts and fan skirts. Elevations range from 4,600 feet in the northern part of the survey area to 6,400 feet in the southern part. The average annual precipitation is 7 to 10 inches, the average annual air temperature is 46 to 52 degrees F, and the frost-free season is 100 to 120 days.

These soils are nearly level to moderately steep and well drained. They are shallow or moderately deep over a hardpan or are very deep. These soils typically are not subject to flooding. Soils in the lower precipitation areas are salt and sodium affected to some degree.

Some of the soils are young (Holocene age) and exhibit leaching of carbonates and some weak silica cementation or durinodes. The older (Wisconsinan age) soils have horizons of clay accumulation over horizons with variable amounts of silica cementation. A few soils are very old (pre-Wisconsinan age) and have thick horizons of clay accumulation over indurated duripans. Erosion has truncated the profile of some of the very old soils, leaving only a remnant hardpan and new soils forming in the younger material overplacing the relict hardpan.

### **6. Broyles-Creemon-Wholan**

*Nearly level and gently sloping, very deep, well drained soils on fan skirts and inset fans*

This map unit is in the Antelope, Carico, Crescent, Grass, and Reese River Valleys. The vegetation is mainly bottlebrush squirreltail, Indian ricegrass, shadscale, and bud sagebrush on the Broyles and Creemon soils and bottlebrush squirreltail and winterfat on the Wholan soil.

This map unit makes up about 8 percent of the survey area.

The Broyles series consists of nearly level to gently sloping soils on the highest fan skirts bordering the fan piedmont remnants. These soils have a thin, light-colored, medium textured surface layer and dominantly

stratified, moderately coarse textured and medium textured subsoil and substratum. They have a salt- and sodium-free or slightly salt- and sodium-affected surface layer and subsoil and a slightly to moderately salt-affected and moderately to strongly sodium-affected substratum.

The Creemon series consists of nearly level soils on fan skirts near the high areas of drainage basins. These soils have a thin, light-colored, medium textured surface layer and a dominantly medium textured subsoil and substratum. The substratum is moderately salt and slightly sodium affected.

The Wholan series consists of nearly level soils on inset fans that shallowly dissect fan skirts and alluvial plains. These soils have a thin, light-colored, medium textured surface layer and a dominantly medium textured subsoil and substratum. They are not salt and sodium affected.

Of minor extent in this map unit are Orovada, Relley, and Misad soils. Orovada soils are medium textured and on nearly level to moderately sloping fan skirts that receive additional soil moisture from runoff. They have a slightly salt- and sodium-affected substratum and support Thurber needlegrass, bottlebrush squirreltail, and Wyoming big sagebrush. Relley soils are medium textured on nearly level fan skirts. They have a moderately salt- and slightly sodium-affected substratum and support bottlebrush squirreltail and shadscale. Misad soils are very gravelly, moderately coarse textured, and on nearly level to gently sloping inset fans. They have moderately to strongly salt-affected and moderately sodium-affected profiles and support bottlebrush squirreltail, black greasewood, and shadscale.

This map unit is used for livestock grazing, wildlife habitat, irrigated cropland, and homesite development. The main limitation is the low average annual precipitation. This map unit is suited to crops, pasture, and hay if an adequate, dependable water supply is available.

This unit is moderately suited to homesite development.

### **7. Orovada-Broyles-Shabliss**

*Nearly level to moderately steep, shallow or very deep, well drained soils on fan aprons, fan skirts, and fan piedmont remnants*

This map unit is in the northern part of the survey area north of the Humboldt River and west of the Sheep Creek Range.

The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush on Orovada and Shabliss soils and bottlebrush squirreltail,

Indian ricegrass, shadscale, and bud sagebrush on Broyles soils.

This map unit makes up about 3 percent of the survey area.

The Orovada series consists of very deep soils on gently sloping to moderately sloping fan aprons and upper fan skirts. These soils have a thin, moderately coarse textured surface layer and a dominantly stratified, moderately coarse textured and medium textured subsoil and substratum. They have a slightly or moderately salt-affected substratum.

The Broyles series consists of very deep soils on nearly level to moderately sloping, lower fan skirts bordering the Humboldt River meander belt. These soils have a thin, light-colored, medium textured surface layer and a dominantly stratified moderately coarse textured and medium textured subsoil and substratum. They have a slightly to moderately salt-affected and moderately to strongly sodium-affected substratum.

The Shabliss series consists of shallow soils on moderately steep, nonburied, erosional side slopes of fan piedmont remnants. These soils have a thin, medium textured surface layer and a medium textured subsoil over a strongly silica-cemented hardpan. These soils are not salt affected.

Of minor extent in this unit are Goldrun and Blackhawk soils. Goldrun soils are very deep, excessively drained, coarse textured soils on nearly level to gently sloping sand sheets and semistabilized dunes. They support western wheatgrass, Indian ricegrass, and big sagebrush. Blackhawk soils are shallow, well drained soils on gently sloping to moderately sloping erosional fan piedmont remnants. They have a medium textured profile over a strongly silica-cemented hardpan and support bottlebrush squirreltail, shadscale, and bud sagebrush.

This map unit is used for livestock grazing, wildlife habitat, and irrigated cropland.

## 8. Beoska-Broyles-Whirlo

*Nearly level to moderately sloping, very deep, well drained soils on fan piedmont remnants, fan skirts, and inset fans*

This map unit borders the mountains flanking the Carico Lake and Reese River Valleys and the southern side of Buffalo Valley. The vegetation is bottlebrush squirreltail, shadscale, and bud sagebrush.

This map unit makes up about 12 percent of the survey area.

The Beoska series consists of gently sloping to moderately sloping soils on fan piedmont remnants. These soils have a thin, light-colored, medium textured surface layer; a medium to moderately fine textured

subsoil; and a gravelly, moderately coarse to medium textured substratum. They have a moderately salt-affected and slightly sodium-affected subsoil and a strongly salt- and sodium-affected substratum.

The Broyles series consists of nearly level to moderately sloping soils on fan skirts. These soils have a thin, light-colored, medium textured surface layer and a moderately coarse and medium textured subsoil and substratum. They have a slightly salt-affected surface layer and subsoil and a moderately salt- and slightly sodium-affected substratum.

The Whirlo series consists of nearly level to gently sloping soils on inset fans. These soils have a thin, light-colored, medium textured surface layer and very gravelly, moderately coarse textured subsoil and substratum. They have a slightly salt-affected subsoil and a moderately salt- and slightly sodium-affected substratum.

Of minor extent in this unit are Kingingham, Wholan, and Orovada soils. Kingingham soils are moderately deep, well drained soils on erosional fan piedmont remnants. They have a fine textured, sodium-affected subsoil over an indurated duripan and support bottlebrush squirreltail, shadscale, and bud sagebrush. Wholan soils are very deep, well drained, subject to rare or occasional flooding, medium textured, and on nearly level, slightly convex inset fans. They are not salt or sodium affected and support Indian ricegrass and winterfat. Orovada soils are very deep, well drained, subject to rare flooding, medium textured, and on gently sloping to moderately sloping fan aprons. They are not salt or sodium affected and support Thurber needlegrass, bluebunch wheatgrass, and Wyoming big sagebrush.

This unit is used for livestock grazing and wildlife habitat. The main limitation is the low average annual precipitation. On Kingingham soils, the moderately salt- and slightly sodium-affected subsoil also is a limitation.

## 9. Ricert-Orovada-Tenabo

*Nearly level to moderately sloping, shallow and very deep, well drained soils on fan piedmont remnants and fan skirts*

This map unit flanks the mountains along the north sides of Buffalo and Crescent Valleys and extends from the mountains to the edge of the semibolson of Antelope Valley. The vegetation is mainly bottlebrush squirreltail, Indian ricegrass, shadscale, and bud sagebrush.

This map unit makes up about 8 percent of the survey area.

The Ricert series consists of very deep soils on gently sloping to moderately sloping, lower fan

piedmont remnants. These soils have a thin, light-colored, medium textured surface layer; a fine textured subsoil; and a very gravelly, moderately coarse textured substratum. They have a moderately sodium-affected subsoil and a slightly salt- and strongly sodium-affected substratum.

The Orovada series consists of very deep soils on nearly level to moderately sloping fan skirts. These soils have a thin, light-colored, medium textured surface layer and a very gravelly, moderately coarse textured subsoil and substratum. They have a slightly salt-affected subsoil and a moderately salt- and slightly sodium-affected substratum.

The Tenabo series consists of shallow soils on nearly level to gently sloping, higher, erosional fan piedmont remnants. These soils have a thin, light-colored, medium textured surface layer and a moderately fine textured subsoil over an indurated hardpan. They have a slightly to moderately sodium-affected subsoil.

Of minor extent in this unit are Broyles and Batan soils. Broyles soils are very deep, well drained, medium textured soils on nearly level to gently sloping inset fans and fan skirt margins. They have a slightly salt- and sodium-affected surface layer and subsoil and a slightly to moderately salt-affected and moderately to strongly sodium-affected substratum and support bottlebrush squirreltail, Indian ricegrass, and shadscale. Batan soils are very deep, moderately well drained, medium to moderately fine textured, and on nearly level alluvial flat remnants. They have strongly salt- and sodium-affected profiles and support bottlebrush squirreltail, shadscale, and black greasewood. These soils are not subject to flooding.

This map unit is used for livestock grazing and as wildlife habitat. The main limitations are the low average annual precipitation and the salt- and sodium-affected surface layer and subsoil.

#### 10. Bouflat-Orovada

*Gently sloping and moderately sloping, moderately deep and very deep, well drained soils on fan piedmont remnants and fan skirts*

This map unit is located on the north boundary of the survey area flanking both sides of the Rock Creek flood plain. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush.

This map unit makes up about 2 percent of the survey area.

The Bouflat series consists of moderately deep soils on gently sloping to moderately sloping fan piedmont remnants. These soils have a thin, medium textured surface layer and a medium to moderately fine textured

subsoil over a strongly silica-cemented hardpan. These soils are not salt or sodium affected.

The Orovada series consists of very deep soils on gently sloping to moderately sloping fan skirts. These soils have a thin, medium textured surface layer and a moderately coarse and medium textured subsoil and substratum. They have a slightly salt- and sodium-affected substratum.

Of minor extent in this unit are Goldrun, Blacka, and Blackhawk soils. Goldrun soils are very deep, excessively drained, coarse textured, and on gently sloping to moderately sloping sand sheets and semistabilized dunes. They support western wheatgrass, Indian ricegrass, and big sagebrush. Blacka and Blackhawk soils are moderately deep, well drained soils on strongly sloping, erosional fan piedmont remnants. They have a moderately coarse textured profile over a strongly silica-cemented hardpan and support bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush. These soils are not salt or sodium affected.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the moderately low average annual precipitation.

#### 11. Buffaran-Allor-Chiara

*Gently sloping to strongly sloping, shallow and very deep, well drained soils on fan piedmont remnants and fan skirts*

This map unit flanks the Toiyabe Range in Carico and Grass Valleys and the west side of the Sheep Creek Range along the Humboldt River Valley. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush.

This map unit makes up about 5 percent of the survey area.

The Buffaran series consists of shallow soils on gently sloping to moderately sloping, higher erosional fan piedmont remnants. These soils have a thin, light-colored, stony, medium textured surface layer and a fine textured subsoil over an indurated hardpan. They are not salt or sodium affected.

The Allor series consists of very deep soils on gently sloping to strongly sloping, broad fan piedmont remnants. These soils have a thin, gravelly, medium textured surface layer; a gravelly, fine textured subsoil; and a gravelly, moderately coarse and medium textured substratum. They are not salt or sodium affected.

The Chiara series consists of very deep soils on gently sloping to moderately sloping fan skirts. These soils have a thin, moderately coarse textured surface layer and a dominantly stratified, moderately coarse and

medium textured subsoil and substratum. They have a slightly to moderately salt-affected substratum.

Of minor extent in this map unit are Whirlo and Ricert soils. Whirlo soils are very deep, very gravelly, moderately coarse and medium textured soils on nearly level to gently sloping, lower inset fans and fan skirts. They have a slightly salt-affected subsoil and a moderately salt- and slightly sodium-affected substratum. Ricert soils are very deep, medium and moderately fine textured, and on nearly level to gently sloping lower fan piedmont remnants. They have a moderately salt-affected and a moderately to strongly sodium-affected subsoil and substratum. Both of these soils support bottlebrush squirreltail, shadscale, and bud sagebrush.

This map unit is used for livestock grazing and as wildlife habitat.

## 12. Bioya-Chiara-Cortez

*Gently sloping to strongly sloping, shallow and moderately deep, well drained soils on fan piedmont remnants*

This map unit is in the north part of the survey area on the broad Sheep Creek Range plateau. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush.

This map unit makes up about 3 percent of the survey area.

The Bioya series consists of moderately deep soils on gently sloping to moderately sloping, lower fan piedmont remnants. These soils have a thin, medium textured surface layer and medium textured subsoil over an indurated hardpan. They are not salt or sodium affected.

The Chiara series consists of shallow soils on gently sloping to moderately sloping, higher fan piedmont remnants. These soils have a thin, medium textured surface layer and a medium textured subsoil over an indurated hardpan. They are not salt or sodium affected.

The Cortez series consists of moderately deep soils on strongly sloping side slopes of fan piedmont remnants. These soils have a thin, light-colored, medium textured surface layer and a fine textured subsoil over an indurated hardpan. The subsoil is moderately sodium affected.

Of minor extent in this map unit are Alley, Trunk, and Orovada soils. These soils support plant communities similar to those on the major soils and are not salt or sodium affected. Alley soils are very deep, moderately fine textured soils. Trunk soils are deep, fine textured soils. These soils are on steep and very steep plateau side slopes near the boundary of the Tuscarora soil

survey area. Orovada soils are very deep, moderately coarse textured, and on gently sloping fan aprons.

This map unit is used for livestock grazing and as wildlife habitat. The main limitations are the moderately low average annual precipitation and the moderate water-supplying capacity of the soil profile. On Cortez soils, the sodium-affected subsoil is a limitation.

## Areas Dominated by Soils on Foothills and Low Mountains

Six map units are in this group. The soils in this group are dominantly on foothills and low mountains. Elevations range from 4,800 feet at the base of foothills in the northern part of the survey to 8,600 feet on peaks in the low mountains in the southern part. The average annual precipitation is 7 to 12 inches, the average annual air temperature is 42 to 49 degrees F, and the frost-free season is 80 to 110 days.

These soils are gently sloping to very steep and well drained. They are shallow or moderately deep over a hardpan or bedrock or the soils are very deep. These soils are not subject to flooding and are not salt or sodium affected.

Some of the soils are young (Holocene aged) and exhibit either no soil profile development or only a minimal amount of carbonate leaching. The surface of these soils has been severely eroded. The older (Wisconsinan aged) soils have horizons of clay accumulation over horizons that have variable amounts of silica cementation. A few soils are very old (pre-Wisconsinan aged) and have thick horizons of clay accumulation over indurated duripans.

## 13. McVegas-Stingdorn-Old Camp

*Gently sloping to steep, shallow, well drained soils on foothills*

This map unit is on the dry foothills on the north and east sides of the Fish Creek Range and on small isolated hills in the Antelope and Reese River Valleys. The vegetation is mainly bottlebrush squirreltail, Indian ricegrass, and shadscale on McVegas and Stingdorn soils and bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush on Old Camp soils.

This map unit makes up about 2 percent of the survey area.

The McVegas series consists of shallow soils on moderately steep, concave, south-facing side slopes of foothills. These soils have a thin, light-colored, very cobbly, medium textured surface layer and a very cobbly, fine textured subsoil over a strongly silica-cemented hardpan capping hard bedrock. The subsoil is slightly salt affected and moderately to strongly sodium affected.

The Stingdorn series consists of shallow soils on gently sloping to steep, rounded summits and side slopes of foothills. These soils have a thin, light-colored, very cobbly, medium textured surface layer and a very cobbly, moderately fine textured subsoil over an indurated hardpan capping hard bedrock. They are not salt or sodium affected.

The Old Camp series consists of shallow soils on moderately steep to steep, concave, north-facing side slopes on foothills. These soils have a thin, light-colored, very gravelly or cobbly, medium textured surface layer and a very gravelly, moderately fine textured subsoil over hard bedrock. They are not salt or sodium affected.

Of minor extent in this map unit are Bojo, Genaw, and Minat soils. Bojo soils are shallow, medium to moderately fine textured soils over hard bedrock. They are on gently sloping to moderately sloping summits of foothills. Genaw soils are shallow, medium to moderately fine textured soils over soft Tertiary sediments. They are on moderately sloping foothill summits. Minat soils are very deep, very gravelly, medium textured soils on steep, colluvial, foothill side slopes. These soils are not salt or sodium affected and support Thurber needlegrass, spiny hopsage, and Wyoming big sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. The main limitations are the surface rock fragments and droughty soil profiles. On McVegas soils, the sodium-affected subsoil is also a limitation.

#### 14. Puett-Wieland-Genaw

*Gently sloping to strongly sloping, very deep, well drained soils on mountain valley fans and moderately steep and steep, shallow, well drained soils on low, rolling foothills*

This map unit is in the southeast part of the survey area in the Toiyabe Range. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush and areas of Utah juniper and singleleaf pinyon pine.

This map unit makes up about 2 percent of the survey area.

The Puett series consists of shallow soils on moderately steep to steep foothill side slopes. These soils have a thin, medium textured surface layer and subsoil over soft Tertiary sedimentary rock.

The Wieland series consists of very deep soils on gently sloping to strongly sloping, mountain valley fan summits. These soils have a thin, gravelly, medium textured surface layer and a gravelly, fine textured subsoil.

The Genaw series consists of shallow soils on

moderately sloping to strongly sloping, mountain valley fan and rolling foothill shoulders and moderately steep, mountain valley fan and rolling foothill side slopes. These soils have a thin, gravelly, medium textured surface layer and a gravelly medium to moderately fine textured subsoil over soft Tertiary sedimentary rock.

Of minor extent in this unit are Zoesta and Caniwe soils. Zoesta soils are very deep, fine textured soils on moderately sloping, higher mountain valley fans. They support Thurber needlegrass, bluebunch wheatgrass, and low sagebrush. Caniwe soils are very deep, medium to moderately fine textured soils on gently sloping to moderately sloping inset fans. These soils support bluebunch wheatgrass, Thurber needlegrass, and low sagebrush.

This map unit is used for livestock grazing and as wildlife habitat.

#### 15. Tessfive-Puett-Genaw

*Strongly sloping to steep, shallow, well drained soils on foothills and low mountains*

This map unit occurs in small areas bordering Cortez Canyon, in the Fish Creek Basin, on Augusta Mountain, and in hills bordering the southwest part of Carico Lake Valley. The vegetation is mainly Indian ricegrass, Thurber needlegrass, and black sagebrush on Tessfive soils; Indian ricegrass, black sagebrush, and Wyoming big sagebrush on Puett soils; and bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush on Genaw soils.

This map unit makes up about 2 percent of the survey area.

The Tessfive series consists of shallow soils on strongly sloping to moderately steep, convex rolling hill summits and shoulders and moderately steep to steep, low mountain side slopes. These soils have a thin, gravelly, medium textured surface layer and substratum over interbedded limestone and Tertiary sedimentary rock.

The Puett series consists of shallow soils on steep, eroded, rolling foothill side slopes. These soils have a thin, light-colored, medium textured surface layer and substratum over soft Tertiary sedimentary rock.

The Genaw series consists of shallow soils on strongly sloping, concave, rolling foothill summits. These soils have a thin, gravelly, medium textured surface layer and a gravelly, medium to moderately fine textured subsoil over soft Tertiary sedimentary rock.

Of minor extent in this unit are Jung, Grina, and Perlor soils. Jung soils are shallow, very gravelly, fine textured soils on rounded, moderately sloping hill shoulders. They support Indian ricegrass, Sandberg bluegrass, and black sagebrush. Grina soils are shallow

and medium textured over interbedded hard limestone and soft Tertiary sediments on concave foothill side slopes. They support Sandberg bluegrass and Utah juniper. Perlor soils are shallow, medium textured, and on lower rolling hill summits. They support Indian ricegrass, shadscale, and bud sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the shallow depth to bedrock resulting in droughty soil profiles.

#### 16. Robson-Akerue-Buffaran

*Moderately sloping to steep, shallow, well drained soils on foothills and low mountains*

This map unit is on the east side of Battle Mountain and the Shoshone Range near Crescent Valley. The vegetation is bluebunch wheatgrass, Indian ricegrass, low sagebrush, and black sagebrush on Robson soils and bluebunch wheatgrass, Thurber needlegrass, and Wyoming big sagebrush on Akerue and Buffaran soils.

This map unit makes up about 3 percent of the survey area.

The Robson series consists of shallow soils on strongly sloping to steep, rounded, convex, foothill and mountain side slopes. These soils have a thin, cobbly or very gravelly, medium textured surface layer and a very cobbly, fine textured subsoil over hard bedrock.

The Akerue series consists of shallow soils on moderately steep, concave, foothill and low mountain side slopes. These soils have a thin, gravelly, medium textured surface layer and a very gravelly, fine textured subsoil over a thin, indurated hardpan capping hard bedrock.

The Buffaran series consists of shallow soils on moderately sloping, short, mountain valley fans. These soils have a thin, stony, medium textured surface layer and a fine textured subsoil over a thick indurated hardpan.

Of minor extent in this unit are Humdun, Wiskan, and Havingdon soils. Humdun soils are very deep, medium textured soils on steep, concave mountain side slopes. They support bluebunch wheatgrass and Wyoming big sagebrush. Wiskan soils are moderately deep, very gravelly, fine textured soils on steep, convex mountain side slopes. They support bluebunch wheatgrass and black sagebrush. Havingdon soils are deep, very gravelly, fine textured, and on steep, convex, mountain side slopes. They support bluebunch wheatgrass and Wyoming big sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the droughty soil profiles because of the shallow depth to bedrock or a hardpan.

#### 17. Roca-Trunk-Alley

*Moderately sloping to very steep, moderately deep and very deep, well drained soils on foothills*

This map unit is in the north part of the survey area in the Sheep Creek Range. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, and big sagebrush.

This map unit makes up about 2 percent of the survey area.

The Roca series consists of moderately deep soils on moderately steep to steep, upper, south-facing foothill side slopes. These soils have a thin, cobbly, medium textured surface layer and a very cobbly, fine textured subsoil over hard bedrock.

The Trunk series consists of moderately deep soils on moderately sloping to strongly sloping foothill summits and moderately steep to steep foothill side slopes on other aspects. These soils have a thin, cobbly, medium textured surface layer and a fine textured subsoil over hard bedrock.

The Alley series consists of very deep soils on very steep foothill side slopes that have mainly west-facing aspects. These soils have a thin, extremely stony, moderately coarse textured surface layer; a gravelly, moderately fine textured subsoil; and a very cobbly and gravelly, medium textured substratum.

Of minor extent in this map unit are Rock outcrop and Orovida and Goldrun soils. Rock outcrop does not have vegetation and occurs as exposed rimrock along mountain shoulders; cliffs along very steep, eroded mountain side slopes; and scattered peaks. Orovida soils are very deep, well drained, medium textured, and on moderately sloping mountain valley fans. They have similar vegetation to the main components. Goldrun soils are very deep, somewhat excessively drained, coarse textured, and on moderately sloping to strongly sloping sand sheets. They support Indian ricegrass, western wheatgrass, and big sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the hazard of erosion.

#### 18. Old Camp-Colbar-Reluctan

*Strongly sloping to steep, shallow and moderately deep, well drained soils on low mountains*

This map unit is in the southern half of the survey area in the Fish Creek and Augusta Mountains and the Shoshone and Toiyabe Ranges. The vegetation is mainly bluebunch wheatgrass, Thurber needlegrass, Wyoming big sagebrush, and black sagebrush on Old Camp soils; bluebunch wheatgrass and Wyoming big sagebrush on Colbar soils; and bluebunch wheatgrass,

Idaho fescue, and mountain big sagebrush on Reluctan soils.

This map unit makes up about 10 percent of the survey area.

The Old Camp series consists of shallow soils on strongly sloping to steep, west- and south-facing mountain summits and side slopes. These soils have a thin, very gravelly and very cobbly, medium textured surface layer and subsoil over hard bedrock.

The Colbar series consists of moderately deep soils on moderately steep to steep, lower, north- and east-facing mountain side slopes. These soils have a thin, very cobbly, medium textured surface layer and a gravelly, moderately fine textured subsoil over hard bedrock.

The Reluctan series consists of moderately deep soils on moderately steep to steep, higher, north- and east-facing mountain side slopes. These soils have a thick, dark, very gravelly and very cobbly, medium textured surface layer and a gravelly, moderately fine textured subsoil over hard bedrock.

Of minor extent in this unit are Walti, Genaw, and Laped soils. Walti soils are moderately deep, fine textured, and on moderately sloping, higher, concave mountain summits. They support Idaho fescue, Thurber needlegrass, and low sagebrush. Genaw soils are shallow, medium textured, and on strongly sloping, low, rolling hill remnants. They support bluebunch wheatgrass and Wyoming big sagebrush. Laped soils are shallow, medium textured, and on low foothill summits in the Augusta Mountains. They support Indian ricegrass, shadscale, and bud sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the surface rock fragments.

### **Areas Dominated by Soils on High Mountains**

Four map units are in this group. The soils in this group are dominantly on high mountains. Elevations range from 4,900 feet at the base of mountains in the northern part of the survey area to above 9,600 feet on the mountain peaks of the Shoshone Range. The average annual precipitation is 10 to more than 16 inches, the average annual air temperature is 40 to 44 degrees F, and the frost-free season is less than 50 to 90 days.

These soils are gently sloping to very steep, well drained soils. They are shallow, moderately deep, or deep over hard bedrock or the soils are very deep. These soils are not subject to flooding and are not salt or sodium affected.

Some soils are young (Holocene age). Their only soil development is an organic matter enriched layer. Most

of the soils are on older, geomorphic surfaces (Wisconsinan age) exhibiting organic matter enriched layers and a well developed subsoil that has a clay accumulation.

### **19. Sumine-Chen-Rock outcrop**

*Rock outcrop and gently sloping to steep, shallow and moderately deep, well drained soils on high mountains*

This map unit is in the north part of the survey area in the Sheep Creek Range. The vegetation is mainly bluebunch wheatgrass, basin wildrye, and mountain big sagebrush on Sumine soils and Idaho fescue, bluebunch wheatgrass, and low sagebrush on Chen soils. Rock outcrop does not have vegetation.

This map unit makes up about 2 percent of the survey area.

The Sumine series consists of moderately deep soils on steep, mountain side slopes. These soils have a thick, dark, very stony, medium textured surface layer and a very gravelly and very cobbly, moderately fine textured subsoil over hard bedrock.

The Chen series consists of shallow soils on gently sloping to moderately sloping, concave mountain crests. These soils have a thick, dark, very gravelly, medium textured surface layer and a very gravelly and very cobbly, fine textured subsoil over hard bedrock.

Rock outcrop is exposed bedrock on mountain shoulders, cliffs along canyon walls, and scattered peaks.

Of minor extent in this map unit are Susie Creek soils and Rubble land. Susie Creek soils are deep, fine textured, and on gently sloping to strongly sloping, convex mountain crests and shoulders. They support bluebunch wheatgrass, Thurber needlegrass, and mountain big sagebrush. Rubble land consists of rock stripes and screes on mountain side slopes below Rock outcrop. Rubble land does not have vegetation.

This map unit is used for livestock grazing and as wildlife habitat.

### **20. Itca-Reluctan-Punchbowl**

*Moderately steep and steep, shallow and moderately deep, well drained soils on high mountains*

This map unit is in the southern part of the survey area in the Toiyabe and Shoshone Ranges. The vegetation is mainly Indian ricegrass, Thurber needlegrass, and black sagebrush on Punchbowl soils; Idaho fescue, bluebunch wheatgrass, and mountain big sagebrush on Reluctan soils; and bluegrass, singleleaf pinyon pine, and Utah juniper on Itca soils.

This map unit makes up about 4 percent of the survey area.

The Itca series consists of shallow soils on moderately steep and steep, convex mountain crests and side slopes that have mainly eastern and high southern and western aspects. These soils have a thick, dark, very cobbly, medium textured surface layer and a very gravelly, fine textured subsoil over hard bedrock.

The Reluctan series consists of moderately deep soils on moderately steep and steep, concave mountain side slopes that have mainly northern aspects. These soils have a thick, dark, very gravelly and very cobbly, medium textured surface layer and a very gravelly, medium or moderately fine textured subsoil over hard bedrock.

The Punchbowl series consists of shallow soils on moderately steep and steep, lower mountain side slopes that have mainly southern and western aspects. These soils have a thin, very gravelly or extremely stony, medium textured surface layer and a gravelly, medium textured subsoil over hard bedrock.

Of minor extent in this unit are Softscrabble, Cleavage, and Hapgood soils and Rock outcrop. Softscrabble soils are very deep, very gravelly, moderately fine textured soils on higher, north-facing, concave mountain side slopes. In these areas, snow accumulates in winter and the soils support Idaho fescue, bluebunch wheatgrass, and snowberry. Cleavage soils are shallow, very gravelly, medium textured, and on gently sloping to moderately sloping windswept mountain crests. They support Idaho fescue, Webber ricegrass, and low sagebrush. Hapgood soils are very deep, very gravelly, medium textured, and on steep, north-facing snow pockets at high elevations near the southern boundary of the survey area. They support mountain brome, Idaho fescue, and snowberry. Rock outcrop is exposed rimrock along mountain shoulders, cliffs along canyon walls, and scattered peaks. Rock outcrop does not have vegetation.

This map unit is used for livestock grazing and as wildlife habitat. The main limitation is the surface rock fragments.

## 21. Quarz-Walti-Glean

*Strongly sloping to steep, moderately deep and deep, well drained soils on high mountains*

This map unit is in the Shoshone Range and on the Augusta and Battle Mountains. The vegetation is mainly Idaho fescue, bluebunch wheatgrass, mountain big sagebrush, and low sagebrush.

This map unit makes up about 12 percent of the survey area.

The Quarz series consists of moderately deep soils on moderately steep to steep, south- and west-facing mountain side slopes. These soils have a thick, dark,

very gravelly, medium textured surface layer and an extremely gravelly, fine textured subsoil over hard bedrock.

The Glean series consists of deep soils on steep, concave, north-facing mountain side slopes. These soils have a very thick, dark, gravelly, medium textured surface layer and a very gravelly and very cobbly, moderately coarse and medium textured substratum over hard bedrock.

The Walti series consists of moderately deep soils on strongly sloping to moderately steep, convex, mountain crests and shoulders. These soils have a thick, cobbly, medium textured surface layer and a fine textured subsoil over hard bedrock.

Of minor extent in this unit are Reluctan, Cleavage, and Bucan soils and Rock outcrop. Reluctan soils are moderately deep, moderately fine textured, and on moderately steep, east-facing, mountain side slopes. They support Idaho fescue, bluebunch wheatgrass, and mountain big sagebrush. Cleavage soils are shallow, very gravelly, moderately fine textured, and on moderately sloping, windswept, mountain crests. They support Idaho fescue, Webber ricegrass, and low sagebrush. Rock outcrop is exposed bedrock on eroded mountain shoulders and on scattered peaks. Rock outcrop does not have vegetation. Bucan soils are deep, fine textured, and on moderately steep and steep, lower mountain slopes bordering Slaven Canyon. They support Thurber needlegrass, bluebunch wheatgrass, and Wyoming big sagebrush.

This map unit is used for livestock grazing and as wildlife habitat. It is suited to these uses.

## 22. Hapgood-Sumine-Cleavage

*Moderately steep to very steep, shallow, moderately deep and very deep, well drained soils on high mountains*

This map unit is in the Shoshone Range near Mt. Lewis. The vegetation is mainly Idaho fescue, bluebunch wheatgrass, and snowberry on Hapgood soils; bluebunch wheatgrass, basin wildrye, and mountain big sagebrush on Sumine soils; and Idaho fescue, Webber ricegrass, and low sagebrush on Cleavage soils.

This map unit makes up about 3 percent of the survey area.

The Hapgood series consists of very deep soils on steep and very steep, concave, northerly mountain side slopes. These soils have a very thick, dark, very gravelly, medium textured surface layer and a very gravelly and very cobbly, medium textured substratum.

The Sumine series consists of moderately deep soils on moderately steep to steep, southerly facing mountain

side slopes. These soils have a thick, dark, very gravelly, medium textured surface layer and a very gravelly, moderately fine textured subsoil over hard bedrock.

The Cleavage series consists of shallow soils on moderately steep to steep, convex, mountain crests and nose slopes. These soils have a thick, dark, very gravelly surface layer and a very gravelly, moderately fine textured subsoil over hard bedrock.

Of minor extent in this unit are Winada soils and Rock outcrop. Winada soils are moderately deep, moderately fine textured soils on higher, steep, convex, southerly facing mountain side slopes. They support Idaho fescue, bluebunch wheatgrass, and low sagebrush. Rock outcrop is exposed bedrock on mountain shoulders, exposed cliffs along canyon walls, and scattered peaks. Rock outcrop does not have vegetation.

This map unit is mainly used for livestock grazing and as wildlife habitat. The main limitation is the surface rock fragments.

## Broad Land Use Considerations

The soils in this survey area vary widely in their potential for major land uses such as cropland, pasture, rangeland, wildlife habitat, and urban use. Extensive changes in land use are not expected in the foreseeable future.

About 95 percent of the land area is used as rangeland and for related uses. These areas need careful management. Map units 3 and 5 have the highest potential to produce forage. Because these units are near water and produce more palatable plants, they tend to be overused and the range deteriorates. The soils in map units 2, 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 15 are extensively used for range. On these soils the main limitation is generally the inadequate precipitation. On some of these soils, a hardpan or bedrock limits rooting depth. In other areas of these soils, rock fragments on the surface limit use of equipment. The soils in map units 16, 17, 18, 19, 20, 21, and 22 are well suited to range. In most areas of these soils, steepness of slope limits use of equipment. In some areas of these soils, rock fragments on the surface also limit use of equipment. On some soils in map units 16, 18, 20, and 22, the rooting depth is a limitation.

About 4 percent of the land in the survey area is used as irrigated cropland. Approximately 17 percent of the survey area is suitable for use as cropland if irrigation water were available. The main crops grown are alfalfa hay, alfalfa seed, improved grass-legume forage, and small grains, such as barley, wheat, and

oats. Small areas in map units 3, 4, 6, and 7 are used as cropland. On the soils in map unit 3, the seasonal high water table and flooding are limitations. In the rest of map units 4, 6, and 7, no water available for irrigation is the primary limitation.

Most of the water must be pumped from deep strata wells. But wells that produce enough water for these uses are not easily found. The Duric Camborthids of map units 6 and 7 and the Durixerollic Camborthids of map unit 7 are well suited to climatically adapted plants. The short growing season limits the selection of plants. In most areas of the soils in these map units, irrigated crops can be grown if the salt and sodium content is controlled. The slope and the hazard of erosion limit some sloping soils in map units 6 and 7.

Approximately 1 percent of the land in the survey area is used for pasture and meadow hay. The soils in map unit 3 are extensively used for pasture and meadow hay. Most areas of these soils are well suited to this use. On some soils in these areas, the salt and sodium content is a limitation.

Almost all of the land in Lander County, North Part, provides habitat for one or more kinds of wildlife. The Humboldt River, the lower part of Rock Creek, and the Reese River support catfish, black bass, and carp. Several streams and small ponds in the area support trout.

Openland wildlife common to the area includes deer, pheasant, valley quail, cottontail rabbit, meadowlark, and killdeer. These species extensively use the soils, water sources, and the food and cover in the native meadows and pastures in map unit 3. Openland wildlife species also extensively use the irrigated areas and rangeland wildlife, the nonirrigated areas of map units 3, 4, 6, and 7. Watering places are needed when areas are not being irrigated. Fence rows, ditchbanks, and odd corners can be planted with selected plants to improve the habitat. The adjacent areas of range provide additional cover.

The wetland wildlife common to the area includes ducks, geese, herons, muskrat, and beaver. Only map unit 3 has extensive areas of habitat for wetland wildlife. The soils in that map unit support wetland plants. Shallow water areas can be established on the nearly level areas but not on the more sloping areas. Stream entrenchment has drained some areas, which are now poorly suited to use as habitat for wetland wildlife.

The rangeland wildlife common to the area include antelope, mule deer, jackrabbit, chukar, and sage grouse. They extensively use the rest of the map units. In much of the lower elevations of this area, the low precipitation limits the native plant community. Properly designed and located watering facilities benefit wildlife.

## Detailed Soil Map Units

---

The map units delineated on the detailed maps at the back of this survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions in this section, along with the maps, can be used to determine the suitability and limitations of a unit for specific uses. The soil properties and characteristics described can be used to plan the management needed for those or other uses. More information is given under "Use and Management of the Soils" and "Soil Properties."

A map unit delineation on a map represents an area dominated by one or more major kinds of soils or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils or miscellaneous areas. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils and miscellaneous areas are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some "included" areas that belong to other taxonomic classes.

The presence of included areas in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into segments that have similar use and management requirements. The delineation of such landscape segments on the map provides sufficient information for the development of resource plans. But if intensive use of small areas is planned, onsite investigation to precisely define and locate the soils and miscellaneous areas is needed. Some delineations joining the Tuscarora Mountain soil survey area have soil names, map unit components, or physiographic positions that are not exactly the same between the two survey areas. These differences stem primarily from a present-day,

better understanding of soil relationships. Although some differences exist, there should be little or no effect in the use of these surveys for management purposes.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes facts about the unit and gives the principal hazards or limitations to be considered in planning for a few specific uses. Soil suitability ratings are given for selected uses, including range seeding; roadfill; daily cover for landfill; shallow excavations; local roads and streets; pond reservoir areas; embankments, dikes, and levees; sand; and gravel. The "Appendix" lists criteria used to develop these ratings.

The detailed soil map units mapped in the survey area reflect the various relationships of soils and component parts of the landscape. Figures 6 and 7 show the soil-physiographic relationship of the survey area on a three-dimensional basis, in contrast to the two-dimensional presentation of the soil map.

Figure 6 shows some delineations in various positions on the landscape.

Each map unit has one or more major soil components and generally has several contrasting inclusions. Figure 7 shows the physiographic position of each major soil component identified within the respective map units.

The unique physiographic position is given in the map unit descriptions for each soil or miscellaneous area identified.

Soils that have profiles that are almost alike make up a *soil series*. The soils of a series have major horizons that are similar in composition, thickness, and arrangement. Soils of one series can differ in texture of the upper layer or underlying layers. They also can differ in slope, stoniness, salinity, wetness, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Sonoma silt loam, drained, is one of several phases of the Sonoma soils.

Figure 6.—Typical relationship of detailed soil map units and landscapes: Orovada fine sandy loam, 2 to 4 percent slopes (701); Wendane silt loam, occasionally flooded (1143); Ricert-Whirlo-Pineval association (1281); Walti-Softscrabble-Bucan association (3121); Robson-Reluctan association (3152); and Jung-Wiskan association (3846).

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes or associations.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Argenta-Sonoma complex is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Punchbowl-Roca-Rock outcrop association is an example.

This survey includes *miscellaneous areas*. Such areas have little or no soil material and support little or

no vegetation. Playas are an example.

Some areas that are too small to be shown are identified by a special ad hoc symbol on the soil maps.

The Glossary defines many of the terms used in describing the soils or miscellaneous areas.

This survey was mapped at two levels of detail. At the most detailed level, map unit boundaries were plotted and verified at closely spaced intervals. At the less detailed level, map unit boundaries were plotted and verified at wider intervals. The narrowly defined unit indicator is an asterisk in the map legend. The detail of mapping was selected and the map units were designed to meet the needs for the anticipated long-term use of the survey.

Table 4 gives the acreage and proportionate extent of each map unit.

In the map unit descriptions that follow, a semitabular format is used. It uses an uppercase heading, centered in the column (for example, Composition), in identifying the information grouped directly below it. Introducing each item of information under the centered heading is

an italicized term or phrase (for example, Contrasting Inclusions) that identifies or describes the information. Many of the centered headings and introductory terms or phrases are self-explanatory; however, some of them need further explanation and are defined in the Glossary. Some explanations are provided in the following paragraphs, generally in the order in which they are used in the map unit descriptions. More information is given under "Use and Management of the Soils" and "Soil Properties."

*Map unit setting* is given for the entire map unit; it includes position on landscape, elevation, and climate. The position on landscape generally is broader than that given for each major component. The elevation and climatic data apply to the entire unit and are not given for the individual components.

*Composition* is given for the components identified in the name of the map unit as well as for the contrasting inclusions.

Inclusions are areas of components (soils or

miscellaneous areas) that differ from the soils or miscellaneous areas for which the unit is named. Inclusions can be either *similar* or *contrasting*. Similar inclusions are components that differ from the components for which the unit is named but that for purposes of use and management can be considered to be the same as the named components. Note that in the "Composition" paragraph a single percentage is provided for a named soil and the similar inclusions because their use and management are similar.

Contrasting inclusions are components that differ sufficiently from the components for which the unit is named that they would have different use and management if they were extensive enough to be managed separately. For most uses, contrasting inclusions have a limited effect on use and management. Inclusions, which are generally in small areas, could not be mapped separately because of the scale used in mapping. A special symbol identifies some small areas of strongly contrasting inclusions on

Figure 7.—Typical relationship of detailed soil map units and landscapes: Orovada fine sandy loam, 2 to 4 percent slopes (701); Wendane silt loam, occasionally flooded (1143); Ricert-Whirlo-Pineval association (1281); Walti-Softscrabble-Bucan association (3121); Robson-Reluctan association (3152); and Jung-Wiskan association (3846).

the detailed soil maps. A few inclusions may not have been observed and consequently are not mentioned in the descriptions. This was especially likely to happen where the pattern was so complex that it was impractical to make enough observations to identify all the inclusions on the landscape.

*Characteristics of the soil* are given for position on landscape, parent material, slope features, and dominant present vegetation. Also given for each component soil is the typical block profile and important soil properties.

Capsule descriptions include the content of rock fragments in each soil layer. Rock fragment amounts are given as a percentage of the soil by weight. Care must be taken in the interpretation of rock fragment percentages as it is given in this survey. The percentage of rock fragments that are more than 3 inches in diameter is given for the whole soil. After the cobbles, stones, and boulders (rock fragments more than 3 inches in diameter) are accounted for, the soil material and the pebbles (rock fragments less than 3 inches in diameter) are considered separately. Thus, the percent by weight of pebbles is based only on the content of pebbles in the material of pebble size or smaller. This method of identification of rock fragment percentages is commonly used in the engineering classification and analysis of soils.

*Contrasting inclusions* are described in terms of their position on the landscape, contrasting features, and distinctive present vegetation.

*Major uses* for the map unit are given.

Component soil interpretations are given for *wildlife habitat elements, ratings and restrictive features for selected uses, and interpretative groups*.

## Map Unit Descriptions

### 102—Beowawe Variant-Tomera-Whirlo association

#### Map Unit Setting

*Position on landscape:* Piedmont slopes

*Elevation:* 4,500 to 5,500 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### Composition

*Major components:*

- Beowawe Variant silt loam, 4 to 8 percent slopes—Typic Natrargids, fine-loamy over sandy or sandy-skeletal, mixed, mesic—30 percent
- Tomera gravelly loam, 8 to 15 percent slopes—

Xerollic Natrargids, fine, montmorillonitic, mesic—30 percent

- Whirlo gravelly sandy loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 4 to 15 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—10 percent
- Inclusion 2: Xeric Torriorthents, 2 to 4 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

#### Characteristics of the Beowawe Variant Soil

*Position on landscape:* Fan drainageways of slightly dissected parts of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

#### Typical Profile

- 0 to 7 inches—silt loam; 0 to 5 percent cobbles and stones and 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 7 to 25 inches—gravelly clay loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); prismatic structure; hard, firm; very strongly alkaline (pH 9.2); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GC, SC; estimated AASHTO classification—A-6, A-7
- 25 to 60 inches or more—extremely gravelly loamy sand; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 9.0); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* In the upper 25 inches—moderately slow; below this depth—very rapid

*Available water capacity:* 4.9 to 5.5 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Tomera Soil**

*Position on landscape:* Summits and side slopes of fan piedmont remnants

*Parent material:* Mixed sedimentary alluvium with component of pyroclastic material

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### **Typical Profile**

0 to 8 inches—gravelly loam; 25 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, GM, SM-SC, GM-GC; estimated AASHTO classification—A-2, A-4

8 to 33 inches—gravelly sandy clay, gravelly clay; 30 to 45 percent pebbles (by weight); prismatic structure; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—SC, CH; estimated AASHTO classification—A-7

33 to 60 inches or more—extremely gravelly sandy loam, very gravelly loamy sand, very cobbly loam; 1 to 40 percent cobbles and stones and 55 to 70 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 13 to 30); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 33 inches—slow; below this depth—moderately rapid

*Available water capacity:* 5.6 to 7.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Moderate

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

### **Typical Profile**

0 to 7 inches—gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

7 to 13 inches—gravelly sandy loam, gravelly loam, fine sandy loam; 0 to 10 percent cobbles and stones and 15 to 45 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4

13 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 5 to 30 percent cobbles and stones and 50 to 75 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.9 to 5.3 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Inset fans

*Contrasting features:* Occasionally flooded, receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 2**

*Position on landscape:* Adjacent to inset fan channels

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of Beowawe Variant soil for named elements:*

Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of Tomera soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Beowawe Variant Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding, shrink-swell

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Tomera Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—hard to pack

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—shrink-swell, low strength

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, too clayey

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Beowawe Variant soil—IVe, irrigated, and VIIs, nonirrigated; Tomera soil—VIs, nonirrigated; Whirlo soil—IIIe, irrigated, and VIIC, nonirrigated

*Range site:* Beowawe Variant soil—024X020N; Tomera soil—024X005N; Whirlo soil—024X002N

## **112—Millerlux-Reluctan-Cleavage association**

### **Map Unit Setting**

*Position on landscape:* Mountains and plateaus

*Elevation:* 6,200 to 6,900 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 70 days

### **Composition**

#### *Major components:*

- Millerlux gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, clayey, montmorillonitic, frigid—35 percent
- Reluctan gravelly loam, 15 to 30 percent slopes—Aridic Argixerolls, fine-loamy, mixed, frigid—30 percent
- Cleavage very gravelly loam, 15 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Quarz very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—5 percent
- Inclusion 2: Rock outcrop—5 percent
- Inclusion 3: Cleavage extremely gravelly loam, 4 to 15 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—3 percent
- Inclusion 4: Cumulic Haploxerolls, 2 to 4 percent slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent

### **Characteristics of the Millerlux Soil**

*Position on landscape:* Summits of plateaus

*Parent material:* Kind—residuum slightly influenced by loess; source—basalt and tuffs

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Low sagebrush, bluebunch wheatgrass, Thurber needlegrass

### Typical Profile

- 0 to 10 inches—gravelly loam; 5 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4
- 10 to 15 inches—clay; 0 to 10 percent cobbles and stones and 0 to 15 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH; estimated AASHTO classification—A-7
- 15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 12 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 2.0 to 2.4 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Reluctant Soil

*Position on landscape:* North-facing and east-facing side slopes of mountains  
*Parent material:* Kind—colluvium over residuum; source—rhyolite and other extrusive volcanic rock  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Idaho fescue  
*Surface cover:* 15 percent pebbles, 5 percent cobbles

### Typical Profile

- 0 to 13 inches—gravelly loam; 5 to 10 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4
- 13 to 38 inches—gravelly clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); angular blocky

structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7  
 38 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 4.4 to 5.6 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Cleavage Soil

*Position on landscape:* Shoulders and upper side slopes of mountains  
*Parent material:* Kind—residuum; source—extrusive volcanic rock  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Low sagebrush, black sagebrush, bluebunch wheatgrass

### Typical Profile

- 0 to 4 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6
- 4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* South-facing and west-facing side slopes of mountains

*Contrasting features:* Moderately deep soil that has a very gravelly clayey subsoil

*Distinctive present vegetation:* Mountain big sagebrush

#### **Inclusion 2**

*Position on landscape:* Scattered peaks and escarpments along canyon walls

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Crests of mountains

*Contrasting features:* Slopes of 4 to 15 percent and an extremely gravelly surface layer

*Distinctive present vegetation:* Low sagebrush, Idaho fescue

#### **Inclusion 4**

*Position on landscape:* Drainageways and canyon bottoms of mountains

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Millerlux soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Reluctan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Millerlux Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, slope

*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, low strength, slope

*Roadfill:* Poor—depth to bedrock, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, too clayey

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Reluctan Soil for Selected Uses**

*Range seeding:* Fair—small stones, rooting depth, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Millerlux soil—VIIe, nonirrigated; Reluctan soil—VIIe, nonirrigated; Cleavage soil—VIIs, nonirrigated

*Range site:* Millerlux soil—024X018N; Reluctan soil—024X021N; Cleavage soil—024X027N

## **120—Alyan-Graley-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 5,500 to 7,500 feet

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 80 days

## Composition

### Major components:

- Alyan gravelly loam, 4 to 15 percent slopes—Aridic Argixerolls, fine, montmorillonitic, frigid—50 percent
- Graley very gravelly loam, 30 to 50 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—25 percent
- Rock outcrop—15 percent

### Contrasting inclusions:

- Inclusion 1: Puett fine sandy loam, 30 to 50 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—5 percent
- Inclusion 2: Welch silt loam, drained, rarely flooded, 0 to 2 percent slopes—Cumulic Haplaquolls, fine-loamy, mixed, frigid—5 percent

## Characteristics of the Alyan Soil

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—rhyolite, andesite, and siliceous tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

*Typical cover:* 20 percent pebbles, 5 percent cobbles

### Typical Profile

0 to 10 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC, CL-ML, CL; estimated AASHTO classification—A-2, A-4, A-6

10 to 16 inches—clay; 0 to 5 percent cobbles and stones and 15 to 25 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

16 to 24 inches—gravelly clay; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL, CH; estimated AASHTO classification—A-7

24 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.8 to 4.4 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

## Characteristics of the Graley Soil

*Position on landscape:* Side slopes of mountains

*Parent material:* Mixed colluvium over residuum

*Slope features:* Length—long; shape—convex to smooth

*Dominant present vegetation:* Mountain big sagebrush, antelope bitterbrush, Idaho fescue, bluebunch wheatgrass

### Typical Profile

0 to 7 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 60 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

7 to 14 inches—very gravelly clay, very gravelly clay loam; 0 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.3 to 1.8 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

## Characteristics of Rock Outcrop

*Position on landscape:* Rimrock on shoulders and random peaks on crests of mountains

*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Eroded low hills bordering the mountain front

*Contrasting features:* Lacks a layer of clay accumulation, shallow to soft bedrock

*Distinctive present vegetation:* Black sagebrush, Wyoming big sagebrush, Indian ricegrass

#### **Inclusion 2**

*Position on landscape:* Narrow drainageways of mountains

*Contrasting features:* Very deep soils, a seasonal high water table at a depth of 60 to 96 inches

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Alyan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Graley soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Alyan Soil for Selected Uses**

*Range seeding:* Fair—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, hard to pack

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—shrink-swell

*Roadfill:* Severe—depth to bedrock, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Graley Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, depth to bedrock, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Alyan soil—VIs, nonirrigated; Graley soil—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Alyan soil—025X014N; Graley soil—025X012N

## **130—Alley-Dewar association**

### **Map Unit Setting**

*Position on landscape:* Foothills and mountain valley fans

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Alley cobbly fine sandy loam, 30 to 50 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—60 percent

- Dewar very cobbly very fine sandy loam, 4 to 15 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—25 percent

*Contrasting inclusions:*

- Inclusion 1: Alley extremely stony fine sandy loam, 50 to 75 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—10 percent

- Inclusion 2: Rock outcrop—5 percent

### **Characteristics of the Alley Soil**

*Position on landscape:* Side slopes of foothills

*Parent material:* Kind—colluvium and alluvium influenced by loess; source—andesite, basalt, and tuff

*Slope features:* Length—long; shape—concave to smooth

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### **Typical Profile**

0 to 3 inches—cobbly fine sandy loam; 25 to 30 percent cobbles and stones and 10 to 20 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4

3 to 16 inches—gravelly clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated

Unified classification—SC, GC; estimated AASHTO classification—A-6

16 to 40 inches—gravelly fine sandy loam, cobbly fine sandy loam; 0 to 40 percent cobbles and stones and 20 to 50 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4

40 to 60 inches or more—very cobbly fine sandy loam; 30 to 45 percent cobbles and stones and 30 to 40 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 6.0 to 7.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Dewar Soil

*Position on landscape:* Crests of mountain-valley fan remnants adjacent to foothills

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### Typical Profile

0 to 4 inches—very cobbly very fine sandy loam; 40 to 50 percent cobbles and stones and 20 to 35 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

4 to 14 inches—cobbly silty clay loam; 25 to 30 percent cobbles and stones and 10 to 20 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than

2); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

14 to 60 inches—indurated duripan; massive; extremely hard, extremely firm

### Soil and Water Features

*Depth to hardpan:* 13 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.9 to 2.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex side slopes of foothills below rimrock

*Contrasting features:* Extremely stony surface, slopes of more than 50 percent

*Distinctive present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

#### Inclusion 2

*Position on landscape:* Rimrock and scattered peaks on foothills

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Alley soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Dewar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Alley Soil for Selected Uses

*Range seeding:* Fair—large stones, erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim, small stones, slope  
*Pond reservoir areas:* Severe—slope, seepage  
*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Dewar Soil for Selected Uses**

*Range seeding:* Poor—large stones  
*Daily cover for landfill:* Poor—cemented pan  
*Shallow excavations:* Severe—cemented pan  
*Local roads and streets:* Severe—cemented pan, low strength  
*Roadfill:* Poor—cemented pan, low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—large stones, cemented pan  
*Pond reservoir areas:* Severe—cemented pan, slope  
*Embankments, dikes, and levees:* Severe—thin layer, large stones

#### **Interpretive Groups**

*Capability classification:* Alley soil—VIs, irrigated, and VIIs, nonirrigated; Dewar soil—IVs, irrigated, and VIIs, nonirrigated  
*Range site:* Alley soil—024X005N; Dewar soil—024X005N

### **131—Alley-Rock outcrop-Rubble land association**

#### **Map Unit Setting**

*Position on landscape:* Foothills  
*Elevation:* 5,000 to 5,200 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Alley very cobbly very fine sandy loam, 50 to 75 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—45 percent
- Rock outcrop—25 percent
- Rubble land—20 percent

*Contrasting Inclusions:*

- Inclusion 1: Alley cobbly fine sandy loam, 30 to 50 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—5 percent
- Inclusion 2: Lithic Xerollic Haplargids, 0 to 4 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—5 percent

#### **Characteristics of the Alley Soil**

*Position on landscape:* Side slopes of foothills  
*Parent material:* Kind—colluvium and alluvium influenced by loess; source—volcanic rock

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass, spiny hopsage

#### **Typical Profile**

0 to 3 inches—very cobbly very fine sandy loam; 30 to 40 percent cobbles and stones and 30 to 50 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GM, SM-SC, SM; estimated AASHTO classification—A-2  
 3 to 16 inches—gravelly clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SC, GC; estimated AASHTO classification—A-6  
 16 to 40 inches—gravelly fine sandy loam, cobbly fine sandy loam; 0 to 40 percent cobbles and stones and 20 to 50 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4  
 40 to 60 inches or more—very cobbly fine sandy loam; 30 to 45 percent cobbles and stones and 30 to 40 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM; estimated AASHTO classification—A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 6.0 to 7.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—high; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

#### **Characteristics of Rock Outcrop**

*Position on landscape:* Rimrock on shoulders and scattered peaks of foothills

*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Barren

### **Characteristics of Rubble Land**

*Position on landscape:* Rock stripes and scree on side slopes of foothills below Rock outcrop  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Barren

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Convex upper side slopes of foothills  
*Contrasting features:* Cobbly surface, slopes of less than 50 percent  
*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

#### **Inclusion 2**

*Position on landscape:* Crests of foothills  
*Contrasting features:* Hard bedrock within a depth of 20 inches  
*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Alley soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Alley Soil for Selected Uses**

*Range seeding:* Poor—large stones, erodes easily  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—area reclaim, small stones, slope  
*Pond reservoir areas:* Severe—slope, seepage  
*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Alley soil—VIIs, nonirrigated; Rock outcrop—VIIs; Rubble land—VIIs  
*Range site:* Alley soil—024X005N

## **140—Antel silt loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,600 to 5,000 feet  
*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Antel silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—85 percent

#### **Contrasting inclusions:**

- Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—10 percent
- Inclusion 2: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### **Characteristics of the Antel Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Kind—silty alluvium; source—volcanic rock, tuff, loess, and volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, seepweed, bud sagebrush

### **Typical Profile**

0 to 11 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 11 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 35 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 9.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower margin of fan skirts  
*Contrasting features:* Strongly salt- and sodium-affected surface layer

*Distinctive present vegetation:* Black greasewood, shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth inset fans, which slightly dissect the fan skirts

*Contrasting features:* Nonsaline to a depth of 30 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption fields:* Severe—percs slowly

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **141—Antel silt loam, moderately sodic**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

• Antel silt loam, moderately sodic, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—85 percent

#### **Contrasting inclusions:**

• Inclusion 1: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—10 percent

• Inclusion 2: Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### **Characteristics of the Antel Soil**

*Position on landscape:* Fan skirts

*Parent material:* Kind—alluvium influenced by loess and volcanic ash; source—volcanic rock, tuffs

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, pepperweed

### **Typical Profile**

0 to 11 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

11 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 9.0); moderately saline to strongly saline (8 to 25 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 9.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly elevated areas on smooth fan skirts

*Contrasting features:* Weak discontinuous cementation in the substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent smooth to slightly concave inset fans

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Winterfat, Indian ricegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess sodium

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## **142—Antel silty clay loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

• Antel silty clay loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—85 percent

#### **Contrasting inclusions:**

• Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—10 percent

• Inclusion 2: Relley silty clay loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### **Characteristics of the Antel Soil**

*Position on landscape:* Fan skirts

*Parent material:* Kind—alluvium influenced by loess and volcanic ash; source—volcanic rock and tuffs

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, seepweed

### **Typical Profile**

0 to 11 inches—silty clay loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—CL; estimated AASHTO classification—A-6

11 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 35 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 9.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Slightly coarser textured subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Upper margins of fan skirts and adjacent to inset fans

*Contrasting features:* Nonsaline to a depth of 30 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Deep to water

*Irrigation:* Percs slowly, erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

**143—Antel silty clay loam, occasionally flooded****Map Unit Setting**

*Position on landscape:* Stream terraces

*Elevation:* 4,600 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Antel silty clay loam, 0 to 2 percent slopes,

occasionally flooded—Duric Camborthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes, occasionally flooded—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—10 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes, occasionally flooded—Duric Camborthids, coarse-silty mixed, mesic—5 percent

**Characteristics of the Antel Soil**

*Position on landscape:* Stream terraces

*Parent material:* Kind—alluvium influenced by loess and volcanic ash; source—volcanic rock and tuffs

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, basin big sagebrush, shadscale, black greasewood, basin wildrye

**Typical Profile**

0 to 11 inches—silty clay loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL; estimated AASHTO classification—A-6

11 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; moderately alkaline (pH 8.2); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Frequency—occasional;

duration—brief; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 9.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Moderate

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Slightly higher lying, irregularly shaped outer margins of the stream terraces

*Contrasting features:* Rarely flooded

*Distinctive present vegetation:* Bud sagebrush, winterfat, saltbush

#### **Inclusion 2**

*Position on landscape:* Fan skirts adjacent to stream terraces

*Contrasting features:* Coarser textured subsoil

*Distinctive present vegetation:* Winterfat, shadscale, and bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Severe—flooding

*Local roads and streets:* Severe—low strength, flooding

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Flooding

*Irrigation:* Flooding, excess sodium, erodes easily

*Terraces:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIw, irrigated, and VIw, nonirrigated

*Range site:* 024X006N

## **150—Argenta very fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Argenta very fine sandy loam, 0 to 2 percent slopes—

Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Rixie silty clay loam, 0 to 2 percent slopes—Aeric Duric Haploxerolls, fine-loamy, mixed, mesic—5 percent

- Inclusion 2: Sonoma silty clay loam, strongly saline, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Argenta Soil**

*Position on landscape:* Broad flood plain remnants and adjacent to stream channels

*Parent material:* Kind—alluvium high in pyroclastic material; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, saltbush, rabbitbrush, inland saltgrass

### **Typical Profile**

- 0 to 7 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 50 to 65); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 7 to 45 inches—stratified fine sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—gravelly sandy loam; 35 to 45 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—36 to 40 inches; rest of year—below this depth

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 6.5 to 9.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Depressions on flood plains  
*Contrasting features:* Dark colored surface layer, slightly salt and sodium affected, frequently flooded  
*Distinctive present vegetation:* Basin wildrye, creeping wildrye

#### **Inclusion 2**

*Position on landscape:* Narrow, lower flood plain remnants  
*Contrasting features:* Finer textured subsoil, occasionally flooded  
*Distinctive present vegetation:* Alkali sacaton, alkali muhly

#### **Inclusion 3**

*Position on landscape:* Alluvial flats on outer margins of flood plains  
*Contrasting features:* Finer textured subsoil  
*Distinctive present vegetation:* Alkali sacaton, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; grass and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—fair; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness

*Local roads and streets:* Severe—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess sodium, excess salt

*Drainage:* Frost action

*Irrigation:* Soil blowing, erodes easily

*Terraces and diversions:* Erodes easily, soil blowing

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X011N

## **152—Argenta-Sonoma complex**

### **Map Unit Setting**

*Position on landscape:* Flood plains  
*Elevation:* 4,400 to 4,700 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Argenta very fine sandy loam, 0 to 4 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—70 percent
- Sonoma silty clay loam, drained, strongly saline, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Argenta Soil**

*Position on landscape:* Flood plain remnants

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, alkali sacaton

### **Typical Profile**

- 0 to 7 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 50 to 65); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 7 to 45 inches—stratified fine sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—gravelly sandy loam; 35 to 45 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through July—32 to 40 inches; rest of year—below this depth

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 6.5 to 9.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Characteristics of the Sonoma Soil

*Position on landscape:* Recently entrenched part of flood plain remnants

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Willow, basin big sagebrush, silver sagebrush, inland saltgrass, basin wildrye

### Typical Profile

0 to 8 inches—silty clay loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* December through March—42 to 60 inches; rest of year—more than 60 inches

*Frequency of flooding:* Frequency—occasional; duration—brief; months—March through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth, irregularly shaped flood plains

*Contrasting features:* Receives additional soil moisture from flooding and the seasonal high water table

*Distinctive present vegetation:* Basin wildrye, creeping wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### Wildlife habitat elements:

*Suitability of the Argenta soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—fair; shallow water areas—fair

*Suitability of the Sonoma soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

### Ratings and Restrictive Features of the Argenta Soil for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness

*Local roads and streets:* Severe—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

*Drainage:* Frost action

*Irrigation:* Soil blowing, erodes easily

*Terraces and diversions:* Erodes easily, soil blowing

### Ratings and Restrictive Features of the Sonoma Soil for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Frost action

*Irrigation:* Erodes easily, flooding, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* Argenta soil, VIw, irrigated, and VIIw, nonirrigated; Sonoma soil, IIIw, irrigated, and VIIw, nonirrigated

*Range site:* Argenta soil—024X011N; Sonoma soil—024X007N

## **160—Batan fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Batan fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—10 percent
- Inclusion 2: Misad gravelly fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

### **Characteristics of the Batan Soil**

*Position on landscape:* Irregularly shaped alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rocks high in pyroclastic materials

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—fine sandy loam; platy structure; hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); moderately sodic (SAR

35 to 46); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.1 to 12.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth outer margin of alluvial flats remnants

*Contrasting features:* Coarser textured substratum

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 2**

*Position on landscape:* Smooth inset fans and fan skirts adjacent to the upper margin of alluvial flats

*Contrasting features:* Very gravelly substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption field:* Severe—percs slowly  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Severe—low strength  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium  
*Drainage:* Deep to water  
*Irrigation:* Soil blowing, excess salt, excess sodium  
*Terraces and diversions:* Erodes easily, soil blowing

### **Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X003N

## **161—Batan silt loam**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats  
*Elevation:* 4,400 to 5,000 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Sonoma silt loam, strongly saline, 0 to 2 percent slopes, rarely flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants  
*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, black greasewood, littleleaf horsebrush, bud sagebrush, seepweed

### **Typical Profile**

0 to 5 inches—silt loam; platy structure; hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 40 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 11.3 to 12.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth, slightly higher parts of alluvial flat remnants

*Contrasting features:* Loamy soil profile

*Distinctive present vegetation:* Black greasewood, shadscale, and bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth recent alluvial flats near channels

*Contrasting features:* More permeable soil profile

*Distinctive present vegetation:* Black greasewood, shadscale, and bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Smooth flood plains adjacent to alluvial flats

*Contrasting features:* Seasonal high water table at a depth of about 40 inches

*Distinctive present vegetation:* Basin wildrye, black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt, excess sodium

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

**162—Batan silt loam, occasionally flooded****Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Batan silt loam, 0 to 2 percent slopes, occasionally flooded—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Creemon silt loam, 0 to 2 percent slopes, occasionally flooded—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 2: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent
- Inclusion 3: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

**Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Bud sagebrush, winterfat, bottlebrush squirreltail

**Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 40 inches—stratified silt loam to silty clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL; estimated AASHTO classification—A-6

40 to 60 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, firm; strongly alkaline (pH 8.8); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—CL; estimated AASHTO classification—A-6

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Frequency—occasional; duration—very brief; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.3 to 12.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Outer margin of alluvial flat adjacent to inset fans

*Contrasting features:* Coarse textured soil profile

*Distinctive present vegetation:* Winterfat and bud sagebrush

**Inclusion 2**

*Position on landscape:* Fan skirts adjacent to alluvial flat remnants

*Contrasting features:* Rarely flooded

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Inclusion 3**

*Position on landscape:* Adjacent smooth to slightly concave inset fans

*Contrasting features:* Coarser textured soil profile

*Distinctive present vegetation:* Winterfat and bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—low strength, flooding

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Moderate—excess salt

*Drainage:* Deep to water

*Irrigation:* Flooding, excess salt, excess sodium

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X004N

## **163—Batan silt loam, slightly saline**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Batan silt loam, slightly saline, 0 to 2 percent slopes—

Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

- Inclusion 2: Raglan silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—5 percent

- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### **Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, littleleaf horsebrush, bud sagebrush

### **Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth margins of alluvial flats

*Contrasting features:* Coarser textured soil profile

*Distinctive present vegetation:* Shadscale, black greasewood, bottlebrush, squirreltail

**Inclusion 2**

*Position on landscape:* Smooth fan skirts adjacent to alluvial flats

*Contrasting features:* Coarser textured soil profile

*Distinctive present vegetation:* Shadscale and bud sagebrush

**Inclusion 3**

*Position on landscape:* Smooth inset fans dissecting upper part of alluvial flats

*Contrasting features:* Nonsaline soil profile

*Distinctive present vegetation:* Shadscale and bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess sodium

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

**164—Batan-Raglan-Rosney association****Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,700 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition****Major components:**

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—30 percent
- Raglan silt loam, strongly saline-sodic, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—30 percent
- Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—25 percent

**Contrasting inclusions:**

- Inclusion 1: Creemon very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—10 percent
- Inclusion 2: Teman silt loam, 0 to 2 percent slopes—Durixerollic Calciorthids, fine-silty, mixed, mesic—5 percent

**Characteristics of the Batan Soil**

*Position on landscape:* Lower part of alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

**Typical Profile**

0 to 5 inches—silt loam; platy structure; hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Raglan Soil**

*Position on landscape:* Foot slopes of fan skirts overplacing the upper part of alluvial flat remnants  
*Parent material:* Loess influenced by volcanic ash with an admixture of mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### **Typical Profile**

0 to 6 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 6 to 14 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6  
 14 to 60 inches or more—stratified fine sandy loam to silty clay loam; 0 to 5 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 9.6 to 11.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Rosney Soil**

*Position on landscape:* Upper part of alluvial flat remnants

*Parent material:* Loess mantled mixed silty alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Saltbush, Indian ricegrass

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 7 to 25 inches—silt loam; massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (30 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4  
 25 to 60 inches or more—stratified silt loam to silty clay; massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately to strongly sodic (SAR 30 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 10.2 to 11.4 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.64; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Fan skirts adjacent to the upper part of alluvial flats

*Contrasting features:* Coarser textured substratum and a nonsaline-alkali surface layer

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Active inset fans and areas adjacent to channels on alluvial flat remnants

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin wildrye, Wyoming big sagebrush, black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Raglan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Rosney soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

**Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

**Ratings of the Raglan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

**Ratings of the Rosney Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Interpretive Groups

*Capability classification:* Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Raglan soil—VIIs, nonirrigated; Rosney soil—VIIs, nonirrigated

*Range site:* Batan soil—024X003N; Raglan soil—024X003N; Rosney soil—024X012N

## 166—Batan-Wendane-Sonoma association

### Map Unit Setting

*Position on landscape:* Basin floor

*Elevation:* 4,600 to 4,900 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—30 percent

- Wendane silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—30 percent

- Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—8 percent

- Inclusion 2: Typic Torriorthents, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—7 percent

### Characteristics of the Batan Soil

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, basin wildrye, littleleaf horsebrush

### Typical Profile

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46);

estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—.5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats  
*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—slightly concave  
*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, big saltbush, basin wildrye

### **Typical Profile**

0 to 13 inches—silty clay loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7  
 13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 27 to 60 inches or more—stratified silt loam to clay loam; massive; hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—30 to 48 inches; rest of year—below 48 inches  
*Frequency of flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—.5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium with some influence from volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, basin big sagebrush, basin wildrye

### **Typical Profile**

0 to 8 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.2); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* In February through June—18 to 36 inches; rest of year—below 36 inches

*Frequency of flooding:* Frequency—frequent; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—.5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent smooth fan skirts

*Contrasting features:* Moderately well drained soil with a fine sandy loam profile

*Distinctive present vegetation:* Black greasewood, basin big sagebrush, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Smooth stream terraces

*Contrasting features:* Well drained

*Distinctive present vegetation:* Black greasewood, shadscale, basin big sagebrush

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Sonoma soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—good; shallow water areas—fair

#### **Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Wendane Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### **Ratings of the Sonoma Soil for Selected Uses**

*Range seeding:* Poor—excess salt

*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—excess salt, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—wetness

#### **Interpretive Groups**

*Capability classification:* Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Wendane soil—VIIw, nonirrigated; Sonoma soil—IIIw, irrigated, and VIw, nonirrigated

*Range site:* Batan soil—024X003N; Wendane soil—024X007N; Sonoma soil—025X001N

### **167—Batan-Wendane-Valmy association**

#### **Map Unit Setting**

*Position on landscape:* Alluvial flats and fan skirts

*Elevation:* 4,700 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—35 percent

- Wendane silt loam, drained, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—30 percent

- Valmy very fine sandy loam, silty substratum, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—10 percent

- Inclusion 2: Duric Camborthids, 0 to 2 percent slopes, occasionally flooded—Duric Camborthids, fine-silty, mixed, mesic—5 percent

#### **Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth to slightly concave

*Dominant present vegetation:* Shadscale, black greasewood

**Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

**Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Big saltbush, black greasewood, seepweed

**Typical Profile**

0 to 8 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 35 to 46); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

8 to 60 inches or more—silty clay loam, silt loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 25 to 30); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Frequency—occasional; duration—brief; months—December through May

*Permeability:* Moderately slow

*Available water capacity:* 10.2 to 12.0 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Moderate

**Characteristics of the Valmy Soil**

*Position on landscape:* Lower part of fan skirts

*Parent material:* Thin loess mantle influenced by volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Basin big sagebrush, black greasewood, shadscale, spiny horsebrush

**Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4

6 to 46 inches—fine sandy loam; 0 to 15 percent pebbles (by weight); massive; slightly hard, friable; very strongly alkaline (pH 9.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

46 to 60 inches or more—silty clay loam; massive; hard, firm; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 46 inches—moderately rapid; below this depth—moderately slow

*Available water capacity:* 8.6 to 10.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—4; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper part of fan skirts

*Contrasting features:* Well drained soil with a strongly saline-sodic profile

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 2**

*Position on landscape:* Inset fans dissecting alluvial flat remnants

*Contrasting features:* Receives additional soil moisture from runoff and flooding

*Distinctive present vegetation:* Black greasewood, basin big sagebrush, rubber rabbitbrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Valmy soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### **Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Ratings of the Wendane Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess sodium

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—flooding

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

### **Ratings of the Valmy Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Fair—thin layer

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Wendane soil—VIIs, nonirrigated; Valmy soil—IIc, irrigated, and VIIc, nonirrigated

*Range site:* Batan soil—024X003N; Wendane soil—024X015N; Valmy soil—024X022N

## **168—Batan-Bubus-Ocala association**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—35 percent

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—35 percent

- Ocala silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, fine-silty, mixed, mesic—5 percent

- Inclusion 2: Duric Camborthids, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Batan Soil**

*Position on landscape:* Lower part of alluvial flat remnants shallowly dissected by stream channels

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood, bottlebrush squirreltail

#### **Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Bubus Soil**

*Position on landscape:* Upper part of alluvial flat remnants shallowly dissected by stream channels  
*Parent material:* Mixed alluvium high in pyroclastics  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood, bottlebrush squirreltail

#### **Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 25 mmhos/cm); slightly to moderately sodic (SAR 20 to 30); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified

classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Ocala Soil**

*Position on landscape:* Alluvial flats  
*Parent material:* Mixed alluvium influenced by volcanic ash  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, basin wildrye

#### **Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-4, A-6

13 to 60 inches or more—silt loam, silty clay loam; massive; slightly hard and hard, friable and firm; strongly alkaline (pH 8.8); slightly saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

#### **Soil and Water Features**

*Depth to seasonal high water table:* In February through May—42 to 60 inches; rest of year—below 60 inches  
*Frequency of flooding:* Frequency—occasional; duration—long; months—March through May  
*Permeability:* Slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Inset fans dissecting alluvial flat remnants

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Slightly concave fan skirt remnants adjacent to alluvial flats

*Contrasting features:* Noncalcareous surface layer

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Ocala soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

#### **Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Bubus Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### **Ratings of the Ocala Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Interpretive Groups**

*Capability classification:* Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Bubus soil—IIs, irrigated, and VIIs, nonirrigated; Ocala soil—VIIw, nonirrigated

*Range site:* Batan soil—024X003N; Bubus soil—024X003N; Ocala soil—024X007N

## **169—Batan-Ocala-Ocala, rarely flooded, association**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,500 to 5,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—35 percent

- Ocala silty clay loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—25 percent

- Ocala silty clay loam, 0 to 2 percent slopes, rarely flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Playas—5 percent

- Inclusion 3: Xeric Torriorthents, 8 to 15 percent

slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

### **Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Ocala Soil**

*Position on landscape:* Alluvial flats near shallow channels

*Parent material:* Silty alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, basin wildrye, inland saltgrass

### **Typical Profile**

0 to 13 inches—silt clay loam; platy structure; slightly hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately

sodic (SAR 30 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-7

13 to 60 inches or more—silt loam, silty clay loam; massive; slightly hard and hard, friable and firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through May—42 to 60 inches; rest of year—below 60 inches

*Frequency of flooding:* Frequency—occasional; duration—long; months—March through May

*Permeability:* Slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Characteristics of the Ocala, Rarely Flooded, Soil**

*Position on landscape:* Slightly higher unchanneled alluvial flats

*Parent material:* Silty alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood

### **Typical Profile**

0 to 6 inches—silty clay loam; platy structure; hard, friable; very strongly alkaline (pH 9.4); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML, CL; estimated AASHTO classification—A-7

6 to 13 inches—silt loam, silty clay loam; massive; hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 35 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

13 to 60 inches or more—silt loam, silty clay loam; 0 to 10 percent pebbles (by weight); massive; hard and slightly hard, firm and friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm);

moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through May—42 to 60 inches; rest of year—below 60 inches

*Frequency of flooding:* Rare

*Permeability:* Slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Ponded

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave, active inset fans dissecting alluvial flat remnants

*Contrasting features:* Slightly saline-sodic profile

*Distinctive present vegetation:* Basin big sagebrush, black greasewood

#### Inclusion 2

*Position on landscape:* Small, irregularly shaped depressions adjacent to the lower margin of alluvial flats

*Contrasting features:* Areas pond water for prolonged periods and have thick, hard vesicular crusts

*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Convex stabilized dunes on alluvial flats

*Contrasting features:* Sandy loam soil profile

*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Ocala soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

*Suitability of the Ocala, rarely flooded, soil for named elements:* Wild herbaceous plants (nonirrigated)—

very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### Ratings of the Batan Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Ratings of the Ocala Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Ratings of the Ocala, Rarely Flooded, Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium, too crusty

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Interpretive Groups

*Capability classification:* Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Ocala soil—VIIw, nonirrigated; Ocala, rarely flooded, soil—VIIw, nonirrigated

*Range site:* Batan soil—024X003N; Ocala soil—024X007; Ocala, rarely flooded, soil—024X011N

**170—Beoska silt loam, 0 to 2 percent slopes****Map Unit Setting***Position on landscape:* Fan piedmonts*Elevation:* 4,600 to 5,600 feet*Average annual precipitation:* About 7 inches*Average annual air temperature:* About 49 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

- Beoska silt loam, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Tenabo silt loam, 0 to 2 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—5 percent

**Characteristics of the Beoska Soil***Position on landscape:* Nonburied fan piedmont remnants*Parent material:* Loess over loamy and gravelly mixed alluvium*Slope features:* Length—long; shape—smooth*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, Indian ricegrass, bottlebrush squirreltail, cheatgrass**Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—gravelly very fine sandy loam; 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 62 inches or more—very gravelly fine sandy loam; 50 to 75 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

**Soil and Water Features***Depth to seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid*Available water capacity:* 7.9 to 9.8 inches*Water-supplying capacity:* 7 inches*Runoff:* Very slow*Hydrologic group:* B*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Low*Corrosivity:* To steel—high; to concrete—high*Potential frost action:* Low**Contrasting Inclusions****Inclusion 1***Position on landscape:* Convex, slightly higher fan aprons on fan piedmont remnants*Contrasting features:* A strongly cemented hardpan at a depth of less than 40 inches*Distinctive present vegetation:* Shadscale, bud sagebrush**Inclusion 2***Position on landscape:* Smooth inset fans and fan skirts at lower edge of fan piedmont remnants*Contrasting features:* Coarser textured subsoil*Distinctive present vegetation:* Shadscale, bud sagebrush**Inclusion 3***Position on landscape:* Smooth upper part of fan piedmont remnants*Contrasting features:* Indurated hardpan at a depth of 10 to 20 inches*Distinctive present vegetation:* Shadscale, bud sagebrush**Major Uses****Current uses:** Rangeland, wildlife habitat, irrigated cropland**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants

(nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Excess salt, excess sodium

*Irrigation:* Erodes easily, excess sodium

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## **171—Beoska silt loam, 2 to 8 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Beoska silt loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Blacka very fine sandy loam, 2 to 8 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Broyles very fine sandy loam, 2 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent
- Inclusion 3: Tenabo silt loam, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—4 percent
- Inclusion 4: Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

### **Characteristics of the Beoska Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, Indian ricegrass, bottlebrush squirreltail, cheatgrass

### **Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; slightly hard, firm; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, firm; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.9 to 9.8 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly convex fan aprons on fan piedmont remnants

*Contrasting features:* Coarser subsoils and a strongly cemented hardpan within a depth of 40 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth inset fans dissecting the lower fan piedmont and adjacent fan skirts

*Contrasting features:* Coarser textured subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Smooth, slightly dissected summits in the upper parts of fan piedmont remnants

*Contrasting features:* Indurated hardpan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 4**

*Position on landscape:* Concave drainageways and inset fans dissecting the upper part of the fan piedmont

*Contrasting features:* Coarser subsoil; receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess sodium, slope

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIIe, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## **172—Beoska-Tenabo silt loams, nearly level**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Beoska silt loam, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—60 percent
- Tenabo silt loam, 0 to 2 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—30 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—7 percent
- Inclusion 2: Haplic Nadurargids, 0 to 2 percent slopes—Haplic Nadurargids, clayey, montmorillonitic, mesic, shallow—3 percent

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, Indian ricegrass, bottlebrush squirreltail, cheatgrass

### **Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

- 13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2
- 55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 7.9 to 9.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### Characteristics of the Tenabo Soil

*Position on landscape:* Upper summits of fan piedmont remnants  
*Parent material:* A thin loess mantle influenced by volcanic ash over mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, cheatgrass

#### Typical Profile

0 to 13 inches—silt loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4

mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

- 13 to 20 inches—clay loam, gravelly clay loam, silty clay loam; 5 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 20 to 39 inches—indurated duripan; massive; very hard, very firm
- 39 to 60 inches or more—very gravelly loamy sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to hardpan:* 9 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.8 to 4.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

#### Contrasting Inclusions

##### Inclusion 1

*Position on landscape:* Fan drainageways  
*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

##### Inclusion 2

*Position on landscape:* Slightly dissected middle summits of fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability of the Beoska soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

*Suitability of the Tenabo soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features of the Beoska Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess sodium

*Terraces and diversions:* Erodes easily

**Ratings and Restrictive Features of the Tenabo Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—excess sodium, excess salt, seepage

*Drainage:* Deep to water

*Irrigation:* Cemented pan, erodes easily

*Terraces and diversions:* Cemented pan

**Interpretive Groups**

*Capability classification:* Beoska soil—IIIs, irrigated, and VIIs, nonirrigated; Tenabo soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Tenabo soil—024X002N

**173—Beoska-Tenabo silt loams, sloping****Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Beoska silt loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—60 percent

- Tenabo silt loam, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—30 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—7 percent

- Inclusion 2: Haplic Nadurargids, 2 to 8 percent slopes—Haplic Nadurargids, clayey, montmorillonitic, mesic, shallow—3 percent

**Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over gravelly and loamy mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, Indian ricegrass, bottlebrush squirreltail, cheatgrass

**Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH

8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 7.9 to 9.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Tenabo Soil

*Position on landscape:* Upper summits of fan piedmont remnants  
*Parent material:* Thin loess mantle influenced by volcanic ash over mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, cheatgrass

### Typical Profile

0 to 13 inches—silt loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 13 to 20 inches—clay loam, gravelly clay loam, silty clay loam; 5 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 20 to 39 inches—indurated duripan; massive; very hard, very firm

39 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 9 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.8 to 4.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fan drainageways  
*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Dissected middle summits of fan piedmont remnants  
*Contrasting features:* Clayey subsoil and a strongly cemented duripan at a depth of 10 to 20 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability of the Beoska soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

*Suitability of the Tenabo soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—

poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features of the Beoska Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Slope, erodes easily, excess sodium

*Terraces and diversions:* Erodes easily

### **Ratings and Restrictive Features of the Tenabo Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—excess sodium, excess salt, seepage

*Drainage:* Deep to water

*Irrigation:* Slope, cemented pan, erodes easily

*Terraces and diversions:* Cemented pan

### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Tenabo soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Tenabo soil—024X002N

## **174—Beoska-Chiara association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,500 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Beoska silt loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—55 percent
- Chiara fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—30 percent

#### *Contrasting inclusions:*

- Inclusion 1: Xerollic Durargids, 2 to 8 percent slopes—Xerollic Durargids, loamy-skeletal, mixed, mesic, shallow—7 percent
- Inclusion 2: Durixerollic Camborthids, 0 to 4 percent slopes—Durixerollic Camborthids, fine-loamy, mixed, mesic—4 percent
- Inclusion 3: Tenabo silt loam, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—4 percent

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass

### **Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy

loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 7.9 to 9.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Chiara Soil

*Position on landscape:* Shoulders and upper summits of fan piedmont remnants  
*Parent material:* Loess mantle high in volcanic ash over mixed alluvium  
*Slope features:* Length—short; shape—smooth to convex  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### Typical Profile

0 to 5 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4  
 5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 16 inches—indurated duripan; massive; extremely hard, very firm

### Soil and Water Features

*Depth to hardpan:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.4 to 2.8 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fan drainageways on upper fan piedmont remnants  
*Contrasting features:* Very gravelly subsoil over indurated duripan and receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Inset fans  
*Contrasting features:* Very deep soil, lacks a layer of clay accumulation, and receives additional soil moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush

#### Inclusion 3

*Position on landscape:* Smooth to slightly convex stable areas on summits of upper part of fan piedmont remnants  
*Contrasting features:* Loamy, sodium-affected subsoil over an indurated duripan at a depth less than 20 inches  
*Distinctive present vegetation:* Shadscale and bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Beoska Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Chiara Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping, thin layer

#### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Chiara soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Chiara soil—024X005N

### **175—Beoska-Jenor association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Beoska silt loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—50 percent
- Jenor very fine sandy loam, 0 to 2 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—35 percent

*Contrasting inclusions:*

- Inclusion 1: Beoska silt loam, 2 to 4 percent slopes, occasionally flooded—Duric Natrargids, fine-loamy, mixed, mesic—7 percent
- Inclusion 2: Creemon very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent
- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—4 percent

#### **Characteristics of the Beoska Soil**

*Position on landscape:* Shoulders and side slopes of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Shadscale, bud sagebrush, pepperweed, bottlebrush squirreltail

#### **Typical Profile**

0 to 13 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.9 to 9.8 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Jenor Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess over loamy mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, pepperweed

### **Typical Profile**

0 to 6 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

6 to 16 inches—fine sandy loam; 0 to 5 percent cobbles and stones and 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-4

16 to 26 inches—fine sandy loam, sandy loam, gravelly loam; 0 to 5 percent cobbles and stones and 10 to 40 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4, A-2

26 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth foot slopes of fan piedmont remnants

*Contrasting features:* Receives additional soil moisture from runoff and shallow, low-velocity floods

*Distinctive present vegetation:* Winterfat, bud sagebrush, shadscale

#### **Inclusion 2**

*Position on landscape:* Smooth to slightly convex, lower inset fans

*Contrasting features:* Very deep soil with a silty subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Position on landscape:* Adjacent fan skirts

*Contrasting features:* Very deep soil with a silty subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Jenor soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Jenor Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIe, irrigated, and

Vlls, nonirrigated; Jenor soil—IVs, irrigated, and Vlls, nonirrigated

*Range site:* Beoska soil—024X002N; Jenor soil—024X002N

## 177—Beoska-Oxcorel-McConnel association

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Beoska gravelly very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—40 percent
- Oxcorel gravelly very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—30 percent
- McConnel gravelly fine sandy loam, 2 to 4 percent slopes—Xerollic Camborthids, sandy-skeletal, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Haplargids, 4 to 8 percent slopes—Typic Haplargids, fine, montmorillonitic, mesic—5 percent
- Inclusion 2: Typic Camborthids, 2 to 4 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Xerollic Camborthids, 0 to 2 percent slopes—Xerollic Camborthids, fine-loamy, mixed, mesic—5 percent

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—long; shape—slightly convex to smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 13 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; slightly hard, firm; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.0 to 8.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Upper summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth or slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less

than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, GM; estimated AASHTO classification—A-4

5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (less than 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 4.8 to 6.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

#### **Characteristics of the McConnel Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium influenced by loess and volcanic ash over gravelly mixed alluvium

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Typical Profile**

0 to 2 inches—gravelly fine sandy loam; 30 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-4

2 to 12 inches—loam, sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm);

nonsodic (SAR less than 2); estimated Unified classification—ML, SM; estimated AASHTO classification—A4

12 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 0 to 15 percent cobbles and stones and 65 to 90 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid in the upper 12 inches; below this depth—very rapid

*Available water capacity:* 2.9 to 4.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Slightly dissected side slopes of fan piedmont remnants

*Contrasting features:* Clayey subsoil not affected by sodium, 4 to 8 percent slopes

*Distinctive present vegetation:* Shadscale, bud sagebrush

##### **Inclusion 2**

*Position on landscape:* Irregularly shaped fan skirts adjacent to lower part of fan piedmont

*Contrasting features:* Sandy loam subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

##### **Inclusion 3**

*Position on landscape:* Concave inset fan remnants

*Contrasting features:* Heavy loam subsoil

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the McConnel soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones, excess sodium

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the McConnel Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—too sandy, area reclaim, small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Oxcorel soil—IVe, irrigated, and

VIIIs, nonirrigated; McConnel soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Oxcorel soil—024X002N; McConnel soil—024X020N

### **178—Beoska-Malpais-Old Camp association**

#### **Map Unit Setting**

*Position on landscape:* Hills and adjacent fan piedmonts

*Elevation:* 4,800 to 5,600 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Beoska very fine sandy loam, 4 to 8 percent slopes, extremely stony—Duric Natrargids, fine-loamy, mixed, mesic—35 percent
  - Malpais loam, 30 to 50 percent slopes, rubbly—Typic Camborthids, loamy-skeletal, mixed, mesic—30 percent
  - Old Camp very cobbly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—6 percent
  - Inclusion 2: Rock outcrop—4 percent
  - Inclusion 3: Puett sandy loam, 8 to 30 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—3 percent
  - Inclusion 4: Rubble land—2 percent

#### **Characteristics of the Beoska Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess over gravelly and loamy mixed alluvium

*Slope features:* Length—short; shape—slightly convex to slightly concave

*Dominant present vegetation:* Shadscale, bud sagebrush, spiny hopsage, small rabbitbrush, needleandthread

#### **Typical Profile**

0 to 13 inches—very fine sandy loam; 10 to 25 percent cobbles and stones and 10 to 20 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

- 13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2
- 55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft; very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 7.1 to 9.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Malpais Soil**

*Position on landscape:* Dominantly south-facing toe slopes of hills  
*Parent material:* Mixed colluvium  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, shadscale, pine bluegrass, bluebunch wheatgrass, cheatgrass  
*Rock fragments on surface:* Kind—stones; percentage of surface covered—20

#### **Typical Profile**

0 to 3 inches—very gravelly loam; 10 to 20 percent cobbles and 50 to 65 percent pebbles (by weight);

platy structure; soft, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2

3 to 15 inches—very gravelly loam, very cobbly fine sandy loam; 40 to 50 percent cobbles and stones or 65 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1

15 to 60 inches or more—stratified extremely cobbly loam to extremely cobbly sandy loam; 40 to 50 percent cobbles and stones or 50 to 65 percent pebbles (by weight); massive; loose; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.6 to 5.4 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

#### **Characteristics of the Old Camp Soil**

*Position on landscape:* North-facing side slopes, summits, and upper south-facing shoulder slopes of hills  
*Parent material:* Kind—residuum and colluvium influenced by volcanic ash; source—andesite  
*Slope features:* Length—long; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, small rabbitbrush

#### **Typical Profile**

0 to 2 inches—very cobbly loam; 25 to 55 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, SM, GM-GC, SM-SC; estimated AASHTO classification—A-4, A-2

2 to 14 inches—very stony loam, very cobbly clay loam; 35 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.1 to 1.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave inset fans  
*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Scattered peaks on summits and shoulder slopes of hills

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Concave eroded side slopes of hills

*Contrasting features:* Soft bedrock at a depth of 10 to 20 inches

*Distinctive present vegetation:* Black sagebrush, bottlebrush squirreltail

#### Inclusion 4

*Position on landscape:* Side slopes of hills below Rock outcrop

*Contrasting features:* 100 percent stones and cobbles on the surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Malpais soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Old Camp soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Beoska Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Ratings of the Malpais Soil for Selected Uses

*Range seeding:* Poor—large stones, erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—large stones

### Ratings of the Old Camp Soil for Selected Uses

*Range seeding:* Poor—large stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope, large stones

*Local roads and streets:* Severe—depth to bedrock, slope, large stones

*Roadfill:* Poor—depth to bedrock, large stones

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### Interpretive Groups

*Capability classification:* Beoska soil—VIIIs, nonirrigated;

Malpais soil—VIIIs, nonirrigated; Old Camp soil—VIIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Malpais soil—024X026N; Old Camp soil—024X005N

## 181—Beoska-Orovada association

### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 5,600 to 5,900 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Beoska gravelly sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—60 percent
- Orovada fine sandy loam, 2 to 8 percent slopes, rarely flooded—Durixerollic Camborthids, coarse-loamy, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Haplargids, 2 to 8 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—7 percent
- Inclusion 2: Xerollic Camborthids, 2 to 4 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—4 percent
- Inclusion 3: Oxcorel very fine sandy loam, 0 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—4 percent

### Characteristics of the Beoska Soil

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—long; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 13 inches—gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-1

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately

sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 6.8 to 7.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Characteristics of the Orovada Soil

*Position on landscape:* Inset fan remnants

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Sandberg bluegrass, phlox

### Typical Profile

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less

than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave side slopes of fan piedmont remnants

*Contrasting features:* Very gravelly subsoil and substratum

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Inset fans

*Contrasting features:* Gravelly sandy loam throughout the soil profile, receives additional soil moisture from runoff and from occasional floods

*Distinctive present vegetation:* Wyoming big sagebrush, basin big sagebrush, Thurber needlegrass

#### Inclusion 3

*Position on landscape:* Slightly higher summits of fan piedmont remnants

*Contrasting features:* Clayey, sodium-affected subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings and Restrictive Features of the Beoska Soil for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Excess salt, excess sodium, slope

*Terraces and diversions:* Erodes easily

### Ratings and Restrictive Features of the Orovada Soil for Selected Uses and Practices

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action, flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Soil blowing, slope, erodes easily

*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Orovada soil—IIIe, irrigated, and VIc, nonirrigated

*Range site:* Beoska soil—024X002N; Orovada soil—024X020N

## 182—Beoska-Whirlo-Misad association

### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Beoska very fine sandy loam, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—30 percent
- Whirlo silt loam, 0 to 2 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—30 percent
- Misad gravelly sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—25 percent

#### Contrasting inclusions:

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—8 percent
- Inclusion 2: Duric Natrargids, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—7 percent

### Characteristics of the Beoska Soil

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess over gravelly mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Typical Profile

- 0 to 13 inches—very fine sandy loam; 5 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4
- 13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2
- 55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.5 to 9.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Characteristics of the Whirlo Soil

*Position on landscape:* Inset fan remnants

*Parent material:* Mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Typical Profile

- 0 to 12 inches—silt loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 15 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.9 to 6.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Misad Soil**

*Position on landscape:* Inset fans  
*Parent material:* Mixed alluvium with some influence from loess high in volcanic ash  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—gravelly sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-1, A-2  
 7 to 31 inches—stratified fine sandy loam to very gravelly sandy loam; 5 to 10 percent cobbles and stones and 40 to 60 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-1, A-2  
 31 to 60 inches or more—very gravelly loamy sand to extremely gravelly coarse sand; 5 to 10 percent cobbles and stones and 60 to 80 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 31 inches—moderately rapid; below this depth—rapid  
*Available water capacity:* 2.9 to 4.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hydrologic group:* B  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent to stream channels  
*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, shadscale

#### **Inclusion 2**

*Position on landscape:* Upper summits of fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 40 to 60 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Misad soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Misad Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIs, irrigated, and VIIs, nonirrigated; Whirlo soil—IIC, irrigated, and VIIc, nonirrigated; Misad soil—IIIs, irrigated, and VIIs, nonirrigated

*Range site:* Beoska soil—024X002N; Whirlo soil—024X002N; Misad soil—024X002N

### **183—Beoska-Dewar-Orovada association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,400 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Beoska very fine sandy loam, 4 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—40 percent
- Dewar gravelly loam, 2 to 8 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—30 percent
- Orovada gravelly very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Haplargids, 15 to 50 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 2: Xeric Torriorthents, 15 to 50 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—5 percent
- Inclusion 3: Duric Natrargids, 15 to 50 percent slopes—Duric Natrargids, loamy-skeletal, mixed, mesic—5 percent

#### **Characteristics of the Beoska Soil**

*Position on landscape:* Summits and shoulders on the lower part of fan piedmont remnants

*Parent material:* Loess over loamy and gravelly mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 13 inches—very fine sandy loam; 5 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.7 to 9.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Dewar Soil**

*Position on landscape:* Summits on the upper parts of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 4 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC, CL; estimated AASHTO classification—A-6

4 to 14 inches—gravelly clay loam, gravelly silty clay loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6, A-7

14 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 13 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Orovada Soil**

*Position on landscape:* Inset fans

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush, Sandberg bluegrass, spiny hopsage

### **Typical Profile**

0 to 8 inches—gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.2 to 9.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* North-facing side slopes of fan piedmont remnants

*Contrasting features:* Very deep soil with slopes of 15 to 50 percent

*Distinctive present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush

#### **Inclusion 2**

*Position on landscape:* Slight concave side slopes of rock pediment remnants exposed by dissection of fan piedmonts

*Contrasting features:* Soft bedrock within a depth of 20 inches and slopes of 15 to 50 percent

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* South-facing side slopes of fan piedmont remnants

*Contrasting features:* Very deep soil with slopes of 15 to 50 percent

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Dewar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Dewar Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Dewar soil—IVe, irrigated, and VIIs, nonirrigated; Orovada soil—IIIe, irrigated, and VIc, nonirrigated

*Range site:* Beoska soil—024X002N; Dewar soil—024X005N; Orovada soil—028B010N

## **185—Beowawe silt loam**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Beowawe silt loam, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 2: Beoska silt loam, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—5 percent

- Inclusion 3: Tenabo silt loam, 0 to 2 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—5 percent

### **Characteristics of the Beowawe Soil**

*Position on landscape:* Slightly dissected summits of fan piedmont remnants

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

### **Typical Profile**

0 to 6 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.3); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 11 inches—loam, silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

11 to 60 inches or more—coarse sandy loam, loam; 5 to 15 percent pebbles (by weight); massive; hard, very friable; strongly alkaline (pH 8.9); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—SM, ML; estimated AASHTO classification—A-2, A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 8.5 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth inset fans  
*Contrasting features:* Coarser textured subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Smooth, undissected part of the fan piedmont  
*Contrasting features:* Finer textured subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Convex upper fan piedmont remnants  
*Contrasting features:* Indurated duripan within a depth of 20 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—area reclaim, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—piping, excess sodium  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess sodium  
*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X002N

## 192—Vanwyper-Trunk-Trunk, steep, association

### Map Unit Setting

*Position on landscape:* Mountains  
*Elevation:* 5,400 to 6,000 feet  
*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 46 degrees F  
*Frost-free season:* About 105 days

### Composition

#### Major components:

- Vanwyper cobbly loam, 15 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—40 percent
- Trunk cobbly clay loam, 4 to 15 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—25 percent
- Trunk cobbly clay loam, 15 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—20 percent

#### Contrasting inclusions:

- Inclusion 1: Rock outcrop—7 percent
- Inclusion 2: Aridic Haploxerolls, 4 to 8 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, mesic—3 percent
- Inclusion 3: Typic Camborthids, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—3 percent

- Inclusion 4: Typic Durorthids, 8 to 15 percent slopes—Typic Durorthids, loamy, mixed, mesic, shallow—2 percent

### **Characteristics of the Vanwyper Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum; source—tuffaceous and volcanic rocks

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Basin wildrye, Wyoming big sagebrush

*Surface cover:* 10 percent pebbles, 10 percent cobbles

### **Typical Profile**

0 to 7 inches—cobbly loam; 10 to 25 percent cobbles and stones and 15 to 35 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

7 to 22 inches—very cobbly clay, very cobbly clay loam; 30 to 55 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL, CH; estimated AASHTO classification—A-7

22 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.6 to 2.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Trunk Soil**

*Position on landscape:* Summits of mountains

*Parent material:* Kind—residuum and colluvium; source—sedimentary rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### **Typical Profile**

0 to 5 inches—cobbly clay loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); granular structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Trunk, Steep, Soil**

*Position on landscape:* West-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—sedimentary rocks

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### **Typical Profile**

0 to 5 inches—cobbly clay loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); granular structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure;

hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Small peaks and rimrock escarpments

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Upper drainageways

*Contrasting features:* Very deep soil that has a thick dark surface layer and receives additional soil moisture from runoff

*Distinctive present vegetation:* Mountain big sagebrush, antelope bitterbrush

#### Inclusion 3

*Position on landscape:* Lower drainageways and outwash fans

*Contrasting features:* Very deep soil with moderately salt- and sodium-affected substratum

*Distinctive present vegetation:* Shadscale, black greasewood

#### Inclusion 4

*Position on landscape:* South-facing, isolated, convex toe slopes of mountains

*Contrasting features:* Duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Vanwyper soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Trunk, steep, soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Vanwyper Soil for Selected Uses

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, large stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, slope, shrink-swell

*Roadfill:* Poor—depth to bedrock, low strength, slope

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—large stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

### Ratings of the Trunk Soil for Selected Uses

*Range seeding:* Fair—droughty, too arid

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—depth to bedrock, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Trunk, Steep, Soil for Selected Uses

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Vanwyper soil—VIIIs,

nonirrigated; Trunk soil—VIIIs, nonirrigated; Trunk, steep, soil—VIIe, nonirrigated

*Range site:* Vanwyper soil—024X028N; Trunk soil—024X005N; Trunk, steep, soil—024X005N

## 193—Berning-Alley association

### *Map Unit Setting*

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

### *Composition*

*Major components:*

- Berning extremely cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—45 percent
- Alley very gravelly loam, 15 to 30 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Malpais extremely gravelly loam, 30 to 50 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—8 percent
- Inclusion 2: Whirlo extremely gravelly sandy loam, 2 to 8 percent slopes, occasionally flooded—Typic Camborthids, loamy-skeletal, mixed, mesic—7 percent

### *Characteristics of the Berning Soil*

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Kind—alluvium; source—tuffaceous rocks

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

*Surface cover:* 50 percent pebbles, 15 percent cobbles

### *Typical Profile*

0 to 9 inches—extremely cobbly loam; 50 to 70 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2

9 to 40 inches—very gravelly clay loam, very gravelly clay, very gravelly sandy clay; 0 to 30 percent cobbles and stones and 60 to 75 percent pebbles (by weight); subangular blocky structure; hard, very friable; neutral (pH 7.2); nonsaline (less than 2

mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

40 to 60 inches or more—very gravelly sandy loam, extremely gravelly sandy clay loam; 20 to 40 percent cobbles and stones and 60 to 80 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

### *Soil and Water Features*

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.2 to 4.9 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### *Characteristics of the Alley Soil*

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### *Typical Profile*

0 to 7 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 75 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-1, A-2, A-4

7 to 26 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); blocky structure; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GC, SC; estimated AASHTO classification—A-6

26 to 37 inches—gravelly loam, gravelly sandy loam; 0 to 10 percent cobbles and stones and 40 to 50 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); nonsaline to slightly

saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-2 37 to 60 inches or more—very gravelly sandy loam; 0 to 10 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 6.0 to 7.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Colluvial toe slopes of adjacent mountains  
*Contrasting features:* Low water-supplying capacity  
*Distinctive present vegetation:* Shadscale, Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Inset fans  
*Contrasting features:* Receives additional soil moisture from runoff and flooding, slope of 2 to 8 percent  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Berning soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Alley soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Berning Soil for Selected Uses

*Range seeding:* Poor—large stones  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—large stones

### Ratings of the Alley Soil for Selected Uses

*Range seeding:* Poor—small stones  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, slope  
*Pond reservoir areas:* Severe—slope, seepage  
*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* Berning soil—VIIIs, nonirrigated; Alley soil—VIIIs, nonirrigated  
*Range site:* Berning soil—024X005N; Alley soil—024X005N

## 200—Sonoma Variant silt loam

### Map Unit Setting

*Position on landscape:* Basin floor remnants  
*Elevation:* 5,680 to 5,740 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free season:* About 100 days

### Composition

#### Major components:

- Sonoma Variant silt loam, 0 to 2 percent slopes—Typic Fluvaquents, coarse-silty, mixed (calcareous), mesic—95 percent

#### Contrasting inclusions:

- Inclusion 1: Sonoma silt loam, strongly saline, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### Characteristics of the Sonoma Variant Soil

*Position on landscape:* Basin floor remnants  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Alkali bluegrass, rush

### Typical Profile

0 to 3 inches—silt loam; subangular blocky structure;

slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

3 to 60 inches or more—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.7); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to artesian water table:* 6 to 18 inches throughout the year

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly higher areas on adjacent alluvial flats

*Contrasting features:* Lower fluctuating water table and a finer textured substratum

*Distinctive present vegetation:* Black greasewood, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—very poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—good; shallow water areas—good

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—wetness, frost action

*Roadfill:* Poor—wetness

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—wetness

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, wetness

*Drainage:* Frost action

*Irrigation:* Wetness, erodes easily, excess salt

*Terraces and diversions:* Erodes easily, wetness

### Interpretive Groups

*Capability classification:* Vw, irrigated, and Vw, nonirrigated

*Range site:* 024X043N

## 202—Bioya-Chiara-Cortez association

### Map Unit Setting

*Position on landscape:* Fan piedmont remnants

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Bioya very fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, fine-loamy, mixed, mesic—40 percent

- Chiara very fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—35 percent

- Cortez very fine sandy loam, 8 to 15 percent slopes—Xerollic Nadurargids, fine, montmorillonitic, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Natrargids, 4 to 8 percent slopes—Xerollic Natrargids, fine, montmorillonitic, mesic—5 percent

- Inclusion 2: Kelk silt loam, 0 to 2 percent slopes, occasionally flooded—Durixerollic Camborthids, fine-silty, mixed, mesic—5 percent

### Characteristics of the Bioya Soil

*Position on landscape:* Crests and side slopes of lower fan piedmont remnants

*Parent material:* Kind—loess capped alluvium; source—volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Sandberg bluegrass

### Typical Profile

0 to 11 inches—very fine sandy loam; 0 to 5 percent

pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

11 to 38 inches—silt loam, loam; 0 to 5 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—CL, CL-ML; estimated AASHTO classification—A-6, A-4

38 to 60 inches or more—indurated duripan; massive; very hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 6.1 to 8.0 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Chiara Soil**

*Position on landscape:* Shoulders and crests of higher fan piedmont remnants

*Parent material:* Loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass, rabbitbrush, spiny hopsage

### **Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; extremely hard, very firm

### **Soil and Water Features**

*Depth to hardpan:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 2.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Cortez Soil**

*Position on landscape:* Side slopes of upper fan piedmont remnants

*Parent material:* Thin deposits of loess over mixed alluvium

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass, rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 12 inches—very fine sandy loam; 5 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

12 to 26 inches—clay, gravelly clay, silty clay; 15 to 40 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CH; estimated AASHTO classification—A-7

26 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 22 to 36 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.4 to 4.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Toe slopes of fan piedmont remnants

*Contrasting features:* Very deep soil

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Inset fans

*Contrasting features:* Very deep soil that receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Bioya soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cortez soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Bioya Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan, frost action

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—cemented pan, thin layer

*Pond reservoir areas:* Moderate—slope, seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Chiara Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping, thin layer

#### **Ratings of the Cortez Soil for Selected Uses**

*Range seeding:* Poor—excess sodium

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, cemented pan, excess sodium

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer, hard to pack, excess sodium

### **Interpretive Groups**

*Capability classification:* Bioya soil—IIIe, irrigated, and VIIs, nonirrigated; Chiara soil—IVe, irrigated, and VIIs, nonirrigated; Cortez soil—IVe, irrigated, and VIs, nonirrigated

*Range site:* Bioya soil—024X005N; Chiara soil—024X005N; Cortez soil—024X005N

## **203—Bioya-Shabliss-Puett association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Bioya very fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, fine-loamy, mixed, mesic—55 percent
  - Shabliss very fine sandy loam, 2 to 8 percent slopes—Haploxerollic Durorthids, loamy, mixed, mesic, shallow—15 percent
  - Puett gravelly sandy loam, 15 to 30 percent slopes, very stony—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—15 percent
- Contrasting inclusions:**
- Inclusion 1: Rock outcrop—5 percent
  - Inclusion 2: Xeric Torriorthents, 0 to 8 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent
  - Inclusion 3: Kelk silt loam, 0 to 2 percent slopes,

occasionally flooded—Durixerollic Camborthids, fine-silty, mixed, mesic—4 percent

• Inclusion 4: Shabliss stony loam, 8 to 15 percent slopes—Haploxerollic Durorthids, loamy, mixed, mesic, shallow—2 percent

### **Characteristics of the Bioya Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Kind—loess capped alluvium; source—volcanic rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

11 to 38 inches—silt loam, loam; 0 to 5 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—CL, CL-ML; estimated AASHTO classification—A-6, A-4

38 to 60 inches or more—indurated duripan; massive; very hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 6.1 to 8.0 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Shabliss Soil**

*Position on landscape:* Shoulders of fan piedmont remnants

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Thurber needlegrass,

Wyoming big sagebrush, bluebunch wheatgrass

*Surface cover:* 10 percent pebbles, 4 percent cobbles

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 16 inches—very fine sandy loam, loam, silt loam; 0 to 5 percent cobbles and stones and 0 to 5 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 to 34 inches—strongly cemented duripan; platy structure; very hard, very firm

34 to 60 inches or more—loamy sand, gravelly loamy sand; 0 to 5 percent cobbles and stones and 20 to 40 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.7 to 3.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Puett Soil**

*Position on landscape:* Side slopes of fan piedmont remnants with a core of soft rock

*Parent material:* Kind—residuum; source—tuffaceous rocks

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Indian ricegrass, Wyoming big sagebrush, black sagebrush

*Surface cover:* 25 percent pebbles, 10 percent cobbles, 2 percent stones

### Typical Profile

0 to 4 inches—gravelly sandy loam; 5 to 10 percent cobbles and 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2

4 to 15 inches—coarse sandy loam, gravelly sandy loam, loam; 10 to 50 percent pebbles (by weight); massive; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML, GM; estimated AASHTO classification—A-1, A-2, A-4

15 inches—weathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Exposed bedrock cores on eroded side slopes of fan piedmont remnants

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Toe slopes of fan piedmont remnants

*Contrasting features:* Very deep

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Inset fans

*Contrasting features:* Silty throughout the soil profile, occasionally flooded

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush, black greasewood

#### Inclusion 4

*Position on landscape:* Upper side slopes of fan piedmont remnants

*Contrasting features:* Slopes of 8 to 15 percent and stony surface layer

*Distinctive present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Bioya soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Shabliss soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Puett soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings of the Bioya Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan, frost action

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—cemented pan, thin layer

*Pond reservoir areas:* Moderate—slope, seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Shabliss Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty, cemented pan

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Moderate—cemented pan, frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Puett Soil for Selected Uses

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—seepage, piping

### **Interpretive Groups**

*Capability classification:* Bioya soil—IIIe, irrigated, and VIIs, nonirrigated; Shabliss soil—IVe, irrigated, and VIIs, nonirrigated; Puett soil—VIIe, nonirrigated

*Range site:* Bioya soil—024X005N; Shabliss soil—024X005N; Puett soil—025X025N

## **211—Blacka very fine sandy loam, 0 to 2 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent

- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent

- Inclusion 3: Orovada fine sandy loam, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—4 percent

- Inclusion 4: Jenor very fine sandy loam, 0 to 2 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—3 percent

### **Characteristics of the Blacka Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, kochia, globemallow, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—very fine sandy loam; prismatic

structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 21 inches—fine sandy loam, very fine sandy loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

21 to 31 inches—strongly cemented duripan; massive; very hard, very firm

31 to 60 inches or more—stratified sandy loam to loam; massive; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to hardpan:* 20 to 26 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower inset fans

*Contrasting features:* Very deep soils

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth fan skirts bordering lower edge of fan piedmonts

*Contrasting features:* Very deep soil that has a silty subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Smooth higher inset fans

*Contrasting features:* Very deep soils that receive additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

**Inclusion 4**

*Position on landscape:* Smooth upper part of fan piedmont remnants

*Contrasting features:* Indurated duripan

*Distinctive present vegetation:* Shadscale, bud sagebrush

*Other inclusions of minor extent:* Concave and smooth inset fans that receive additional soil moisture from runoff and occasional flooding, supporting winterfat and Indian ricegrass

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Moderate—cemented pan

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—cemented pan, thin layer

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Cemented pan, erodes easily

*Terraces and diversions:* Cemented pan, erodes easily

**Interpretive Groups**

*Capability classification:* IVs, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

**212—Blacka-Broyles very fine sandy loams, 2 to 8 percent slopes****Map Unit Setting**

*Position on landscape:* Intricately mingled fan piedmonts and fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition****Major components:**

- Blacka very fine sandy loam, 2 to 8 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—45 percent
- Broyles very fine sandy loam, 2 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—40 percent

**Contrasting inclusions:**

- Inclusion 1: Jenor very fine sandy loam, 0 to 2 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Soolake very fine sandy loam, 2 to 8 percent slopes—Typic Torriorthents, sandy, mixed, mesic—5 percent

**Characteristics of the Blacka Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, Kochia, globemallow, bottlebrush squirreltail

**Typical Profile**

0 to 8 inches—very fine sandy loam; prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 21 inches—fine sandy loam, very fine sandy loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

21 to 31 inches—strongly cemented duripan; massive; very hard, very firm

31 to 60 inches or more—stratified sandy loam to loam; massive; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to hardpan:* 20 to 26 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 2.9 to 3.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Loess over mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, kochia, bottlebrush squirreltail

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.3 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth upper summits of fan piedmont remnants

*Contrasting features:* Indurated duripan  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth inset fans  
*Contrasting features:* Very deep soil that receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Sandy throughout the soil profile  
*Distinctive present vegetation:* Black greasewood, shadscale

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### **Wildlife habitat elements:**

*Suitability of the Blacka soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

*Suitability of the Broyles soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### **Ratings and Restrictive Features of the Blacka Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Poor—cemented pan  
*Shallow excavations:* Moderate—cemented pan  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—cemented pan, thin layer  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Slope, cemented pan, erodes easily  
*Terraces and diversions:* Cemented pan, erodes easily

### **Ratings and Restrictive Features of the Broyles Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Fair—too sandy, small stones  
*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Excess salt, slope, erodes easily  
*Terraces and diversions:* Erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* Blacka soil—IVe, irrigated, and VIIs, nonirrigated; Broyles soils—IIIe, irrigated, and VIIc, nonirrigated  
*Range site:* Blacka soil—024X002N; Broyles soil—024X002N

## **213—Blacka-Broyles very fine sandy loams, saline, 2 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Intricately mingled fan piedmonts and fan skirts  
*Elevation:* 4,400 to 5,000 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Blacka very fine sandy loam, strongly saline, 2 to 4 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—60 percent
- Broyles very fine sandy loam, strongly saline, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—30 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, 2 to 4 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—3 percent
- Inclusion 3: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—2 percent

### **Characteristics of the Blacka Soil**

*Position on landscape:* Nonburied fan piedmont remnants  
*Parent material:* Loess capped mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, seepweed

### **Typical Profile**

0 to 8 inches—very fine sandy loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 8 to 21 inches—fine sandy loam, very fine sandy loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 21 to 31 inches—strongly cemented duripan; massive; very hard, very firm  
 31 to 60 inches or more—stratified sandy loam to loam; massive; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to hardpan:* 20 to 26 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 2.9 to 3.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts and inset fans intricately mingled with nonburied fan piedmont remnants  
*Parent material:* Loess capped mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, seepweed

### **Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 11 inches—silt loam, very fine sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Remnants of fan skirts

*Contrasting features:* Nonsaline or slightly saline surface layer and a finer textured substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Remnants of inset fans

*Contrasting features:* Nonsaline or slightly saline surface layer

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Convex fan aprons overplacing fan piedmont remnants

*Contrasting features:* Soils are nonsaline throughout and receive shallow, low-velocity flooding in spring

*Distinctive present vegetation:* Winterfat, Indian ricegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability of the Blacka soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

*Suitability of the Broyles soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features of the Blacka Soil for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Moderate—cemented pan

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Cemented pan, slope, erodes easily

*Terraces and diversions:* Cemented pan, erodes easily

### Ratings and Restrictive Features of the Broyles Soil for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, slope

*Terraces and diversions:* Erodes easily, too sandy

### Interpretive Groups

*Capability classification:* Blacka soil—VIs, irrigated, and VIIs, nonirrigated; Broyles soil—VIs, irrigated, and VIIs, nonirrigated

*Range site:* Blacka soil—024X003N; Broyles soil—024X003N

## **220—Blackhawk very fine sandy loam, 2 to 8 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,800 to 5,200 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Blackhawk very fine sandy loam, 2 to 8 percent slopes—Entic Durorthids, loamy, mixed, mesic, shallow—85 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Xeric Torrifluvents, 2 to 8 percent slopes—Durorthidic Xeric Torrifluvents, sandy-skeletal, mixed, mesic—10 percent
- Inclusion 2: Broyles very fine sandy loam, moderately saline, 2 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 3: Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

### **Characteristics of the Blackhawk Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loamy mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 8 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 8 to 14 inches—loam, very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; strongly alkaline (pH 9.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 14 to 17 inches—strongly cemented duripan; massive; extremely hard, extremely firm
- 17 to 38 inches—stratified sandy loam to extremely

gravelly loamy coarse sand; 10 to 30 percent pebbles (by weight); massive; slightly hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

38 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 50 to 80 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GP-GM, GP, SP-SM, SP; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Range in depth to hardpan:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Above the hardpan—moderate; below the hardpan—very rapid

*Available water capacity:* 2.2 to 2.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth to slightly concave, upper inset fans and areas adjacent to channels

*Contrasting features:* Very deep soil that receives additional soil moisture from runoff and occasional flooding

*Distinctive present vegetation:* Basin big sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent fan skirts

*Contrasting features:* Very deep soils

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 3**

*Position on landscape:* Concave lower broad inset fans

*Contrasting features:* Very deep soil that receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Blackhawk Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Moderate—cemented pan

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, area reclaim

*Pond reservoir areas:* Severe—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—seepage, excess salt

**Interpretive Groups**

*Capability classification:* IVE, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

**230—Broyles very fine sandy loam, 0 to 2 percent slopes**

**Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—3 percent
- Inclusion 3: Weso fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 4: Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, kochia, bottlebrush squirreltail

**Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

**Contrasting Inclusions**

**Inclusion 1**

*Position on landscape:* Smooth lower part of adjacent alluvial flats near flood-plain playas

*Contrasting features:* Calcareous throughout and moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

**Inclusion 2**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Silty throughout

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Smooth lower margin of fan skirts adjacent to alluvial flats

*Contrasting features:* A continuous weakly cemented subhorizon in the upper 40 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 4**

*Position on landscape:* Smooth adjacent fan piedmont remnants

*Contrasting features:* A strongly cemented duripan at a depth of 20 to 26 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption fields:* Slight

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Excess salt

*Terraces and diversions:* Erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* IIs, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **231—Broyles very fine sandy loam, 2 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

• Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—85 percent

#### **Contrasting inclusions:**

- Inclusion 1: Blacka very fine sandy loam, 2 to 4 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 3: Orovada fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Broyles Soil**

*Position on landscape:* Margins of fan skirts

*Parent material:* Loess over loamy mixed alluvium

*Slope features:* Length—long; shape—gently undulating

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth upper fan skirt remnants

*Contrasting features:* A duripan at a depth of 20 to 26 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Undulating fan skirts adjacent to alluvial flats near old channels

*Contrasting features:* Silty throughout

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Adjacent concave inset fans

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Excess salt, erodes easily

*Terraces and diversions:* Erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* IIe, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **232—Broyles very fine sandy loam, cemented substratum, 0 to 2 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Broyles very fine sandy loam, cemented substratum, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 3: Jenor very fine sandy loam, 0 to 2 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, spiny hopsage, horsebrush

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

11 to 28 inches—sandy loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR 5 to 10); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

28 to 45 inches—stratified loamy sand to loamy fine sand; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

45 to 60 inches or more—strongly cemented duripan; massive; very hard, very firm

### Soil and Water Features

*Depth to hardpan:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.7 to 5.9 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—3; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Strongly saline surface layer and a finer textured substratum  
*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Adjacent nonburied fan piedmont remnants  
*Contrasting features:* A duripan at a depth of 20 to 26 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

#### Inclusion 3

*Position on landscape:* Adjacent nonburied fan piedmont remnants  
*Contrasting features:* Indurated duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Fair—cemented pan, thin layer  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight

*Roadfill:* Fair—thin layer  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIs, irrigated, and VIIc, nonirrigated  
*Range site:* 024X002N

## 233—Broyles very fine sandy loam, moderately saline, 0 to 2 percent slopes

### Map Unit Setting

*Position on landscape:* Fan skirts  
*Elevation:* 4,400 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

• Broyles very fine sandy loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—85 percent

#### Contrasting inclusions:

• Inclusion 1: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent  
 • Inclusion 2: Creemon silt loam, strongly saline, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent  
 • Inclusion 3: Raglan silty clay loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—5 percent

### Characteristics of the Broyles Soil

*Position on landscape:* Fan skirts  
*Parent material:* Loess over loamy mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush, seepweed

### Typical Profile

0 to 5 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13)

to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 11 inches—silt loam, very fine sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; slightly hard, very friable; very strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent undulating recent alluvial flat remnants near channels

*Contrasting features:* Calcareous surface layer

*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Adjacent smooth inset fans

*Contrasting features:* Silty throughout

*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 3

*Position on landscape:* Margins of fan skirts adjacent to smooth alluvial flats

*Contrasting features:* Finer textured substratum

*Distinctive present vegetation:* Black greasewood, shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption fields:* Slight

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Excess salt, erodes easily

*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

## 235—Broyles-Creemon association

### Map Unit Setting

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 5,000 to 5,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Broyles silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—45 percent
- Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—7 percent
- Inclusion 2: Duric Natrargids, 0 to 2 percent slopes—

Duric Natrargids, fine-loamy, mixed, mesic—6 percent  
 • Inclusion 3: Xerollic Camborthids, 0 to 2 percent  
 slopes—Xerollic Camborthids, loamy-skeletal, mixed,  
 mesic—2 percent

### **Characteristics of the Broyles Soil**

*Position on landscape:* Upper part of fan skirts  
*Parent material:* Loess over loamy mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud  
 sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 11 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.3 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Creemon Soil**

*Position on landscape:* Lower part of fan skirts and inset fans  
*Parent material:* Silty mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; soft, very

friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 18 inches—silt loam, very fine sandy loam; subangular blocky structure; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

18 to 60 inches or more—stratified very fine sandy loam to silt loam; massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.1 to 12.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent to stream channels on lower margins of fan skirts  
*Contrasting features:* Strongly salt- and sodium-affected surface layer  
*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 2**

*Position on landscape:* Summits of adjacent fan piedmont remnants  
*Contrasting features:* Clay loam subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Adjacent to stream channels on inset fans  
*Contrasting features:* Receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### Wildlife habitat elements:

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Creemon soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Broyles Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Creemon Soil for Selected Uses

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

### Interpretive Groups

*Capability classification:* Broyles soil—IIs, irrigated, and VIIe, nonirrigated; Creemon soil—IIC, irrigated, and VIIc, nonirrigated

*Range site:* Broyles soil—024X002N; Creemon soil—024X002N

## 237—Broyles-Beoska-Orovada association

### Map Unit Setting

*Position on landscape:* Piedmont slope

*Elevation:* 5,000 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

• Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—40 percent

• Beoska very fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—30 percent

• Orovada fine sandy loam, 2 to 8 percent slopes, rarely flooded—Durixerollic Camborthids, coarse-loamy, mixed, mesic—20 percent

#### Contrasting inclusions:

• Inclusion 1: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

• Inclusion 2: Typic Nadurargids, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—5 percent

### Characteristics of the Broyles Soil

*Position on landscape:* Fan skirts

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Beoska Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 13 inches—very fine sandy loam; 5 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 9.0); moderately saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.7 to 9.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Orovada Soil**

*Position on landscape:* Inset fans

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—concave to smooth

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent to concave, irregularly shaped, active channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

## **Inclusion 2**

*Position on landscape:* Convex, slightly higher summits of fan piedmont remnants

*Contrasting features:* An indurated duripan at a depth of less than 20 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

## **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Broyles Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action, flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

## **Interpretive Groups**

*Capability classification:* Broyles soil—IIe, irrigated, and VIIc, nonirrigated; Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Orovada soil—IIIe, irrigated, and VIc, nonirrigated

*Range site:* Broyles soil—024X002N; Beoska soil—024X002N; Orovada soil—024X020N

## **240—Bubus very fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,500 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—8 percent
- Inclusion 2: Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent
- Inclusion 3: Playas—3 percent

### **Characteristics of the Bubus Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Mixed alluvium high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, bottlebrush squirreltail

### **Typical Profile**

- 0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately

sodic (SAR 40 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth outer margins of alluvial flat remnants

*Contrasting features:* Finer textured throughout  
*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Adjacent to channels on smooth alluvial flat remnants

*Contrasting features:* Finer textured throughout  
*Distinctive present vegetation:* Saltbush, Indian ricegrass

#### Inclusion 3

*Position on landscape:* Low, smooth, irregularly shaped depressions and basins on alluvial flats

*Contrasting features:* Pondered  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X003N

## 242—Bubus very fine sandy loam, gravelly substratum

### Map Unit Setting

*Position on landscape:* Alluvial flats  
*Elevation:* 4,400 to 5,000 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Bubus very fine sandy loam, gravelly substratum, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Misad gravelly sandy loam, saline-sodic, 0 to 2 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 3: Playas—5 percent

### Characteristics of the Bubus Soil

*Position on landscape:* Alluvial flat remnants  
*Parent material:* Loamy mixed alluvium high in pyroclastics over gravelly mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### Typical Profile

0 to 6 inches—very fine sandy loam; 0 to 10 percent

pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 40 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

40 to 60 inches or more—stratified very gravelly sand to extremely gravelly loamy coarse sand; 60 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GP-GM, SP-SM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 40 inches—moderate; below this depth—very rapid

*Available water capacity:* 6.6 to 7.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—4; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

#### Contrasting Inclusions

##### Inclusion 1

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Finer textured substratum

*Distinctive present vegetation:* Black greasewood, shadscale

##### Inclusion 2

*Position on landscape:* Adjacent to channels and narrow inset fans dissecting alluvial flats

*Contrasting features:* Very gravelly throughout the soil profile

*Distinctive present vegetation:* Black greasewood, shadscale

##### Inclusion 3

*Position on landscape:* Scattered, irregularly shaped sink areas

*Contrasting features:* Ponded water for long periods

*Distinctive present vegetation:* Barren

#### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

#### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption fields:* Moderate—percs slowly

*Daily cover for landfill:* Fair—thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength

*Roadfill:* Fair—low strength

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Excess sodium, excess salt, erodes easily

*Terraces and diversions:* Erodes easily

#### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

### 243—Bubus-Playas complex

#### Map Unit Setting

*Position on landscape:* Basin floors

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### Composition

*Major components:*

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—55 percent

- Playas—30 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—

Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—10 percent

- Inclusion 2: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### **Characteristics of the Bubus Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Mixed alluvium high in pyroclastics

*Slope features:* Length—long; shape—smooth to undulating

*Dominant present vegetation:* Black greasewood, shadscale

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.0 to 10.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Playas**

*Position on landscape:* Small basins and depressions

*Parent material:* Lacustrine deposits overlaced in some places by a thin layer of alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Barren

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Alluvial flat remnants adjacent to playas

*Contrasting features:* Finer textured substratum

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 2**

*Position on landscape:* Adjacent fan skirt remnants

*Contrasting features:* Nonsaline in the upper 20 or 30 inches

*Distinctive present vegetation:* Saltbush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability of the Bubus soil for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features of the Bubus Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Septic tank absorption field:* Moderate—percs slowly

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* Bubus soil—IIs, irrigated, and VIIs, nonirrigated; Playas—VIIIw

*Range site:* Bubus soil—024X003N

## **244—Bubus-Relley complex**

### **Map Unit Setting**

*Position on landscape:* Fan skirts and alluvial flats

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Bubus gravelly loam, slightly saline, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—50 percent
- Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—40 percent

#### *Contrasting inclusions:*

- Inclusion 1: Hessian silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### **Characteristics of the Bubus Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Mixed alluvium high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

#### **Typical Profile**

0 to 6 inches—gravelly loam; 25 to 35 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.9 to 10.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Relley Soil**

*Position on landscape:* Fan skirts

*Parent material:* Kind—silty alluvium influenced by loess and volcanic ash; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

#### **Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 30); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 10.8 to 12.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Fan skirt remnants

*Contrasting features:* Gravelly substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Smooth inset fans dissecting alluvial flat remnants

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Winterfat

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability of the Bubus soil for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

*Suitability of the Relley soil for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—fair

**Ratings and Restrictive Features of the Bubus Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Ratings and Restrictive Features of the Relley Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* Bubus soil—IIs, irrigated, and VIIs, nonirrigated; Relley soil—IIC, irrigated, and VIIc, nonirrigated

*Range site:* Bubus soil—024X002N; Relley soil—024X002N

**245—Bubus-Needle Peak-Yipor association****Map Unit Setting**

*Position on landscape:* Inset fans and alluvial flats

*Elevation:* 4,600 to 4,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free season:* About 110 days

**Composition****Major components:**

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—40 percent
- Needle Peak silt loam, 0 to 2 percent slopes, occasionally flooded—Aquic Torriorthents, fine-silty, mixed (calcareous), mesic—25 percent
- Yipor very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—20 percent

**Contrasting inclusions:**

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—10 percent
- Inclusion 2: Typic Torriorthents, 0 to 4 percent slopes—Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

**Characteristics of the Bubus Soil**

*Position on landscape:* Slightly rilled alluvial flat remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, seepweed

**Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 25 mmhos/cm); slightly sodic (SAR 13)

to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Needle Peak Soil**

*Position on landscape:* Inset fans  
*Parent material:* Silty mixed alluvium with some influence from loess and volcanic ash  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Black greasewood, basin big sagebrush, rubber rabbitbrush, basin wildrye

### **Typical Profile**

0 to 9 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7  
 9 to 49 inches—silt loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7  
 49 to 60 inches or more—sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* In January through May—48 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* Frequency—occasional; duration—brief; months—March through June  
*Permeability:* Moderately slow  
*Available water capacity:* 10.9 to 12.1 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

### **Characteristics of the Yipor Soil**

*Position on landscape:* Inset fan remnants  
*Parent material:* Silty mixed alluvium with a component of loess  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, basin wildrye, sickle saltbush

### **Typical Profile**

0 to 16 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 16 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 9.3 to 11.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth fan skirts  
*Contrasting features:* Rarely flooded, well drained soils

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 2**

*Position on landscape:* Dunes superimposed on alluvial flats

*Contrasting features:* Severe wind erosion hazard

*Distinctive present vegetation:* Shadscale, black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Needle Peak soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Yipor soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Bubus Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### **Ratings of the Needle Peak Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Fair—too clayey

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, frost action, flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Moderate—thin layer, piping

#### **Ratings of the Yipor Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

### **Interpretive Groups**

*Capability classification:* Bubus soil—VIs, irrigated, and VIIs, nonirrigated; Needle Peak soil—IIw, irrigated, and VIw, nonirrigated; Yipor soil—IIc, irrigated, and VIIc, nonirrigated

*Range site:* Bubus soil—024X003N; Needle Peak soil—024X006N; Yipor soil—024X012N

## **247—Bubus-Isolde association**

### **Map Unit Setting**

*Position on landscape:* Lake plains

*Elevation:* 4,600 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 115 days

### **Composition**

*Major components:*

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—65 percent

- Isolde fine sand, 4 to 30 percent slopes—Typic Torripsamments, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Entic Durorthids, 0 to 2 percent slopes—Entic Durorthids, loamy, mixed, mesic, shallow—5 percent

- Inclusion 2: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Bubus Soil**

*Position on landscape:* Interdune areas of lake plain terraces

*Parent material:* Loess over mixed alluvium high in pyroclastics

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, seepweed, spiny horsebrush

**Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.0 to 10.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

**Characteristics of the Isolde Soil**

*Position on landscape:* Partially stabilized sand dunes on lake plain terraces

*Parent material:* Kind—eolian sands; source—various kinds of rock

*Slope features:* Length—short; shape—undulating

*Dominant present vegetation:* Spiny hopsage, black greasewood, bud sagebrush, shadscale, Indian ricegrass

**Typical Profile**

0 to 7 inches—fine sand; single grained; loose; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SP, SP-SM; estimated AASHTO classification—A-3

7 to 60 inches or more—fine sand, sand; single grained; loose; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SP, SP-SM; estimated AASHTO classification—A-3

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very rapid

*Available water capacity:* 3.6 to 5.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—moderate; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Adjacent nonburied fan skirt remnants

*Contrasting features:* Strongly cemented duripan within a depth of 20 inches

*Distinctive present vegetation:* Shadscale, black greasewood

**Inclusion 2**

*Position on landscape:* Higher part of lake plain near springs

*Contrasting features:* Poorly drained soils, silty throughout soil profile

*Distinctive present vegetation:* Black greasewood, seepweed

**Inclusion 3**

*Position on landscape:* Lowest portion of lake plains

*Contrasting features:* Somewhat poorly drained, silty throughout soil profile

*Distinctive present vegetation:* Black greasewood, basin wildrye

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Isolde soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

**Ratings of the Bubus Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt

#### **Ratings of the Isolde Soil for Selected Uses**

*Range seeding:* Too arid, too sandy, soil blowing  
*Daily cover for landfill:* Poor—seepage, too sandy, slopes  
*Shallow excavations:* Severe—cutbanks cave, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Fair—slope  
*Sand:* Probable source  
*Gravel:* Improbable source—too sandy  
*Topsoil:* Poor—too sandy, slope  
*Pond reservoir areas:* Severe—seepage, slope  
*Embankments, dikes, and levees:* Severe—seepage, piping

#### **Interpretive Groups**

*Capability classification:* Bubus soil—IIs, irrigated, and VIIs, nonirrigated; Isolde soil—VIIs, nonirrigated  
*Range site:* Bubus soil—024X003N; Isolde soil—027X016N

### **248—Bubus-Batan-Reese association**

#### **Map Unit Setting**

*Position on landscape:* Basin floor  
*Elevation:* 4,500 to 4,700 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—45 percent
- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—25 percent
- Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—20 percent

##### *Contrasting inclusions:*

- Inclusion 1: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-loamy, mixed (calcareous), mesic—8 percent
- Inclusion 2: Aquic Torriorthents, 0 to 2 percent slopes—Aquic Torriorthents, fine-loamy, mixed (calcareous), mesic—2 percent

#### **Characteristics of the Bubus Soil**

*Position on landscape:* Alluvial flats remnants  
*Parent material:* Mixed alluvium high in pyroclastics  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, seepweed, black greasewood, littleleaf horsebrush

#### **Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 42); estimated Unified classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Batan Soil**

*Position on landscape:* Stream terraces  
*Parent material:* Kind—loess influenced silty alluvium; source—volcanic rock high in pyroclastics  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, black greasewood, littleleaf horsebrush, seepweed, bottlebrush squirreltail

#### **Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 5 to 68 inches or more—stratified silt loam to silty clay

loam; massive; hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Reese Soil

*Position on landscape:* Irregularly shaped flood plains  
*Parent material:* Kind—loamy alluvium; source—volcanic rock  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Black greasewood, seepweed, shadscale

### Typical Profile

0 to 9 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4  
 9 to 60 inches or more—stratified silt loam to silty clay loam; massive; hard, friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### Soil and Water Features

*Depth to seasonal high water table:* In March through July—18 to 36 inches; rest of year—below 36 inches  
*Frequency of flooding:* Frequency—occasional; duration—brief or long; months—April through May  
*Permeability:* Slow  
*Available water capacity:* 9.2 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Backfilled flood plain channels  
*Contrasting features:* Somewhat poorly drained and moderately salt and sodium affected throughout the soil profile  
*Distinctive present vegetation:* Shadscale, black greasewood

#### Inclusion 2

*Position on landscape:* Adjacent to irregularly shaped flood plain channels  
*Contrasting features:* Frequently flooded  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Reese soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

#### Ratings of the Bubus Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt

#### Ratings of the Batan Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Good

*Shallow excavations:* Slight  
*Local roads and streets:* Severe—low strength  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Reese Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Poor—excess sodium  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—low strength, flooding, frost action  
*Roadfill:* Fair—low strength, shrink-swell, wetness  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess sodium, excess salt  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—wetness, excess sodium, excess salt

#### **Interpretive Groups**

*Capability classification:* Bubus soil—IIs, irrigated, and VIIs, nonirrigated; Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Reese soil—VIIw, nonirrigated  
*Range site:* Bubus soil—024X003N; Batan soil—024X003N; Reese soil—024X011N

### **251—Bucan-Bucan, steep, association**

#### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 5,200 to 5,500 feet  
*Average annual precipitation:* About 10 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free season:* About 90 days

#### **Composition**

##### *Major components:*

- Bucan cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—60 percent
- Bucan very cobbly loam, 15 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—25 percent

##### *Contrasting inclusions:*

- Inclusion 1: Humdun silt loam, 30 to 50 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—10 percent
- Inclusion 2: Rock outcrop—5 percent

#### **Characteristics of the Bucan Soil**

*Position on landscape:* Lower side slopes of mountains

*Parent material:* Kind—residuum and colluvium capped with loess high in volcanic ash; source—volcanic rock

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass, Thurber needlegrass

*Surface cover:* 15 percent pebbles

#### **Typical Profile**

0 to 5 inches—cobbly loam; 20 to 25 percent cobbles and stones and 20 to 30 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 23 inches—clay; 0 to 10 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH; estimated AASHTO classification—A-7

23 to 42 inches—cobbly clay, gravelly clay loam, gravelly clay; 10 to 30 percent cobbles and stones and 15 to 30 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-7

42 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.2 to 8.0 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.20; T value—3; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

#### **Characteristics of the Bucan, Steep, Soil**

*Position on landscape:* Upper side slopes of mountains

*Parent material:* Kind—residuum and colluvium capped with loess high in volcanic ash; source—volcanic rock

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, rabbitbrush, bluebunch wheatgrass, Thurber needlegrass

### Typical Profile

- 0 to 5 inches—very cobbly loam; 25 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6
- 5 to 30 inches—clay; 0 to 10 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH; estimated AASHTO classification—A-7
- 30 to 52 inches—cobbly clay, gravelly clay loam, gravelly clay; 10 to 30 percent cobbles and stones and 15 to 30 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-7
- 52 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 7.2 to 8.0 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* North-facing, concave side slopes of mountains  
*Contrasting features:* Lacks a layer of clay accumulation  
*Distinctive present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

#### Inclusion 2

*Position on landscape:* Scattered peaks on mountains

*Contrasting features:* Bedrock exposed at the surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Bucan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Bucan, steep, soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Bucan Soil for Selected Uses

*Range seeding:* Fair—too arid, large stones  
*Daily cover for landfill:* Poor—large stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—low strength, shrink-swell, slope  
*Roadfill:* Poor—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, too clayey  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Moderate—large stones

### Ratings of the Bucan, Steep, Soil for Selected Uses

*Range seeding:* Poor—large stones  
*Daily cover for landfill:* Poor—large stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—low strength, shrink-swell, slope  
*Roadfill:* Poor—low strength, shrink-swell, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, too clayey  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Moderate—large stones

### Interpretive Groups

*Capability classification:* Bucan soil—VIIs, nonirrigated; Bucan, steep, soil—VIIs, nonirrigated  
*Range site:* Bucan soil—024X005N; Bucan, steep, soil—024X028N

## 252—Bucan-Humdun-Rock outcrop association

### Map Unit Setting

*Position on landscape:* Mountains  
*Elevation:* 5,000 to 5,800 feet

*Average annual precipitation:* About 10 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free season:* About 90 days

### **Composition**

#### *Major components:*

- Bucan cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—50 percent
- Humdun silt loam, 15 to 30 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—20 percent
- Rock outcrop—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids, 2 to 8 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—5 percent
- Inclusion 2: Aridic Haploxerolls, 2 to 8 percent slopes—Aridic Haploxerolls, coarse-loamy, mixed, frigid—5 percent

### **Characteristics of the Bucan Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium capped with loess high in volcanic ash; source—volcanic rock

*Slope features:* Length—long to short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, basin wildrye, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—cobbly loam; 20 to 25 percent cobbles and stones and 20 to 30 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 15 inches—clay; 0 to 10 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH; estimated AASHTO classification—A-7

15 to 42 inches—cobbly clay, gravelly clay loam, gravelly clay; 10 to 30 percent cobbles and stones and 15 to 30 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-7

42 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 7.2 to 8.0 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—3; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Humdun Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—loess high in volcanic ash over colluvium and residuum; source—mostly extrusive volcanic rock

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, basin wildrye, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—silt loam; platy structure; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 24 inches—loam, very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

24 to 60 inches or more—loam, very fine sandy loam, silt loam; massive; soft, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 10.3 to 12.1 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Rimrock and scattered peaks on mountains  
*Dominant present vegetation:* Barren

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests of mountains  
*Contrasting features:* Bedrock within a depth of 20 inches

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Foot slopes adjacent to mountain drainageways

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, mountain big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Bucan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Humdun soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Bucan Soil for Selected Uses**

*Range seeding:* Fair—too arid, large stones  
*Daily cover for landfill:* Poor—large stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, too clayey  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Humdun Soil for Selected Uses**

*Range seeding:* Poor—erodes easily  
*Daily cover for landfill:* Poor—slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Bucan soil—VIIs, nonirrigated; Humdun soil—VIe, nonirrigated; Rock outcrop—VIIIs  
*Range site:* Bucan soil—024X005N; Humdun soil—024X005N

## **262—Chen-Slaven-Chen, cobbly, association**

### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 6,000 to 7,000 feet  
*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free season:* About 90 days

### **Composition**

#### *Major components:*

- Chen very gravelly loam, 4 to 15 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—40 percent
- Slaven loam, 15 to 30 percent slopes, very stony—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—25 percent
- Chen cobbly loam, 15 to 30 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Cumulic Haploxerolls, 2 to 8 percent slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, frigid—6 percent
- Inclusion 2: Rock outcrop—5 percent
- Inclusion 3: Cumulic Haplaquolls, 0 to 4 percent slopes—Cumulic Haplaquolls, loamy-skeletal, mixed, frigid—2 percent
- Inclusion 4: Pachic Haploxerolls, 15 to 30 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent

### **Characteristics of the Chen Soil**

*Position on landscape:* Crests of mountains  
*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—volcanic rocks  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Low sagebrush, rabbitbrush, Sandberg bluegrass

### Typical Profile

0 to 10 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

10 to 16 inches—very cobbly clay, very gravelly clay, extremely gravelly clay; 0 to 45 percent cobbles and stones and 55 to 75 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

16 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 1.1 to 1.7 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Slaven Soil

*Position on landscape:* Middle and lower side slopes of mountains

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert, shale, and quartzite

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, Sandberg bluegrass, bottlebrush squirreltail

*Rock fragments on surface:* Kind—stones; percentage of surface covered—2

### Typical Profile

0 to 5 inches—loam; 10 to 25 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 22 inches—extremely gravelly clay, extremely gravelly sandy clay, extremely gravelly clay loam; 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.0 to 2.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Chen, Cobbly, Soil

*Position on landscape:* Upper side slopes of mountains

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—volcanic rocks

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Low sagebrush, rabbitbrush, Sandberg bluegrass

### Typical Profile

0 to 8 inches—cobbly loam; 20 to 25 percent cobbles and stones and 20 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 6.9); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

8 to 17 inches—very cobbly clay, very gravelly clay, extremely gravelly clay; 5 to 45 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; neutral (pH 7.1); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

17 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow  
*Available water capacity:* 1.7 to 2.0 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent to mountain drainageways  
*Contrasting features:* Receives additional soil moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush

#### **Inclusion 2**

*Position on landscape:* Scattered peaks of mountains  
*Contrasting features:* Bedrock exposed at the surface  
*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Toe slopes of mountains adjacent to seeps and springs  
*Contrasting features:* Receives additional soil moisture from runoff and lateral flow from seeps and springs  
*Distinctive present vegetation:* Tufted hairgrass, alpine timothy

#### **Inclusion 4**

*Position on landscape:* North-facing side slopes of mountains  
*Contrasting features:* Thick, dark colored surface layer and receives additional soil moisture from drifted snow  
*Distinctive present vegetation:* Snowberry, Idaho fescue

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, recreation

#### **Wildlife habitat elements:**

*Suitability of the Chen soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Chen, cobbly, soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Chen Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, too clayey

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Slaven Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Chen, Cobbly, Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, too clayey

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones, thin layer

### **Interpretive Groups**

*Capability classification:* Chen soil—VIIIs, nonirrigated; Slaven soil—VIIIs, nonirrigated; Chen, cobbly, soil—VIIIs, nonirrigated

*Range site:* Chen soil—024X027N; Slaven soil—025X014N; Chen, cobbly, soil—024X027N

## **272—Cherry Spring-Enko association**

### **Map Unit Setting**

*Position on landscape:* Piedmont slope

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Cherry Spring very fine sandy loam, 2 to 8 percent slopes—Haploxerollic Durargids, fine-loamy, mixed, mesic—50 percent
- Enko very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—40 percent

#### Contrasting inclusions:

- Inclusion 1: Cortez very fine sandy loam, 2 to 4 percent slopes—Xerollic Nadurargids, fine, montmorillonitic, mesic—5 percent
- Inclusion 2: Kelk silt loam, 0 to 2 percent slopes, occasionally flooded—Durixerollic Camborthids, fine-silty, mixed, mesic—5 percent

### Characteristics of the Cherry Spring Soil

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

#### Typical Profile

- 0 to 7 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 7 to 29 inches—loam, silt loam, clay loam; 0 to 5 percent cobbles and stones and 5 to 20 percent pebbles (by weight); subangular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6
- 29 to 41 inches—strongly cemented duripan
- 41 to 60 inches or more—stratified sandy loam to extremely gravelly sandy loam; 0 to 5 percent cobbles and stones and 35 to 65 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Above the duripan—moderately slow; below the duripan—moderately rapid

*Available water capacity:* 4.8 to 5.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Enko Soil

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

#### Typical Profile

- 0 to 7 inches—very fine sandy loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4
- 7 to 15 inches—loam, sandy loam, fine sandy loam; 0 to 15 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4
- 15 to 60 inches or more—sandy loam, loam, fine sandy loam; 0 to 25 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-2, A-4

#### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.4 to 8.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Summits of upper fan piedmont remnants

*Contrasting features:* Clayey subsoil and an indurated duripan

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Inset fans

*Contrasting features:* Receives additional soil moisture from runoff and flooding

*Distinctive present vegetation:* Wyoming big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Cherry Spring soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Enko soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Cherry Spring Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan, low strength, shrink-swell

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Enko Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Cherry Spring soil—IIIe, irrigated, and VIIs, nonirrigated; Enko soil—IVe, irrigated, and VI, nonirrigated

*Range site:* Cherry Spring soil—024X005N; Enko soil—024X005N

## **282—Chiara-Orovada association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,200 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Chiara very fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—50 percent

- Orovada very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Chiara very stony very fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—5 percent

- Inclusion 2: Goldrun fine sand, 2 to 8 percent slopes—Xeric Torripsamments, mixed, mesic—5 percent

### **Characteristics of the Chiara Soil**

*Position on landscape:* Slightly dissected fan piedmont remnants

*Parent material:* Loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Indian ricegrass, pine bluegrass

### **Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm);

nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; extremely hard, very firm

### Soil and Water Features

*Depth to hardpan:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 2.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Orovada Soil

*Position on landscape:* Inset fans

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—slightly concave to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Indian ricegrass, spiny hopsage

### Typical Profile

0 to 8 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent fan collars

*Contrasting features:* Stony surface layer

*Distinctive present vegetation:* Wyoming big sagebrush, pine bluegrass

#### Inclusion 2

*Position on landscape:* Sand sheets overplacing fan piedmont remnants

*Contrasting features:* Sandy throughout the soil profile

*Distinctive present vegetation:* Wyoming big sagebrush, needleandthread

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Chiara Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping, thin layer

#### Ratings of the Orovada Soil for Selected Uses

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Chiara soil—Ive, irrigated, and VIIs, nonirrigated; Orovada soil—IIle, irrigated, and VIc, nonirrigated

*Range site:* Chiara soil—024X005N; Orovada soil—024X005N

## **283—Chiara-Tenabo association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,200 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Chiara very fine sandy loam, 4 to 15 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—50 percent

- Tenabo very fine sandy loam, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—40 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, fine-loamy, mixed, mesic—7 percent

- Inclusion 2: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—3 percent

### **Characteristics of the Chiara Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium capped with loess high in volcanic ash

*Slope features:* Length—short; shape—smooth to slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, small rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2);

estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; extremely hard, very firm

### **Soil and Water Features**

*Depth to hardpan:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 2.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Tenabo Soil**

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium capped with loess high in volcanic ash

*Slope features:* Length—short; shape—smooth to convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 18 inches—clay loam, gravelly clay loam, silty clay loam; 5 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

18 to 40 inches—indurated duripan; massive; very hard, very firm

40 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.8); strongly saline (more than 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 9 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.8 to 4.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave inset fan remnants  
*Contrasting features:* Very deep soil that receives additional soil moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### Inclusion 2

*Position on landscape:* Adjacent to active channels on inset fans  
*Contrasting features:* Very deep soil that receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, basin big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Tenabo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Chiara Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty  
*Daily cover for landfill:* Poor—cemented pan  
*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan  
*Roadfill:* Poor—cemented pan  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—cemented pan  
*Pond reservoir areas:* Severe—cemented pan, slope  
*Embankments, dikes, and levees:* Severe—piping, thin layer

#### Ratings of the Tenabo Soil for Selected Uses

*Range seeding:* Poor—too arid, excess sodium  
*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy  
*Shallow excavations:* Severe—cemented pan, cutbanks cave  
*Local roads and streets:* Severe—cemented pan  
*Roadfill:* Poor—cemented pan  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—cemented pan, small stones, too sandy  
*Pond reservoir areas:* Severe—cemented pan, seepage  
*Embankments, dikes, and levees:* Severe—excess sodium, excess salt, seepage

### Interpretive Groups

*Capability classification:* Chiara soil—IVe, irrigated, and VIIs, nonirrigated; Tenabo soil—IVe, irrigated, and VIIs, nonirrigated  
*Range site:* Chiara soil—024X005N; Tenabo soil—024X002N

## 284—Chiara-Dewar association

### Map Unit Setting

*Position on landscape:* Fan piedmonts  
*Elevation:* 5,900 to 6,200 feet  
*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 105 days

### Composition

#### Major components:

- Chiara gravelly loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—55 percent
  - Dewar gravelly loam, 2 to 8 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—30 percent
- Contrasting inclusions:*
- Inclusion 1: Orovida gravelly loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—10 percent
  - Inclusion 2: Duric Camborthids, 8 to 15 percent slopes—Duric Camborthids, loamy-skeletal, mixed, mesic—3 percent
  - Inclusion 3: Typic Durargids, 2 to 8 percent slopes—

Typic Durargids, loamy, mixed, mesic, shallow—2 percent

### **Characteristics of the Chiara Soil**

*Position on landscape:* Lower fan piedmont remnants

*Parent material:* Loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, small rabbitbrush, phlox

### **Typical Profile**

0 to 5 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4

5 to 16 inches—very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; very hard, very firm

### **Soil and Water Features**

*Depth to hardpan:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.4 to 2.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Dewar Soil**

*Position on landscape:* Upper fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—slightly convex to concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, small rabbitbrush, phlox

### **Typical Profile**

0 to 4 inches—gravelly loam; 0 to 5 percent cobbles

and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC, CL; estimated AASHTO classification—A-6

4 to 14 inches—gravelly silty clay loam, gravelly clay loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6, A-7

14 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 13 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.8 to 2.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Convex inset fans

*Contrasting features:* Very deep soils

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Position on landscape:* Convex scarps on the lower margins of fan piedmont remnants

*Contrasting features:* Very deep soils that have very gravelly profiles

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Convex slightly raised positions on summits of fan piedmont remnants

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Dewar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Chiara Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping, thin layer

**Ratings of the Dewar Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, cemented pan

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—piping

**Interpretive Groups**

*Capability classification:* Chiara soil—Vle, irrigated, and VIIs, nonirrigated; Dewar soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Chiara soil—028B010N; Dewar soil—028B010N

**285—Chiara-Trunk-Midraw association****Map Unit Setting**

*Position on landscape:* Hills and adjacent fan piedmonts

*Elevation:* 5,200 to 6,000 feet

*Average annual precipitation:* About 10 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 105 days

**Composition**

*Major components:*

- Chiara very gravelly loam, 4 to 15 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—40 percent

- Trunk cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—30 percent

- Midraw very cobbly loam, 15 to 30 percent slopes—Xerollic Durargids, clayey, montmorillonitic, mesic, shallow—15 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Haploxerolls, 15 to 30 percent slopes—Aridic Haploxerolls, coarse-loamy, mixed, frigid—5 percent

- Inclusion 2: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

- Inclusion 3: Durixerollic Camborthids, 15 to 30 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

**Characteristics of the Chiara Soil**

*Position on landscape:* Dissected summits, shoulders and side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium capped by loess high in volcanic ash

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, spiny hopsage, small rabbitbrush, bluebunch wheatgrass, invading Utah juniper

**Typical Profile**

0 to 5 inches—very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

5 to 16 inches—very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; extremely hard, very firm

**Soil and Water Features**

*Depth to hardpan:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.4 to 2.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Trunk Soil**

*Position on landscape:* Crests and east-, west-, and south-facing side slopes of hills

*Parent material:* Kind—colluvium and residuum; source—andesite and rhyolitic tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, spiny hopsage, bluebunch wheatgrass, small rabbitbrush, scattered Utah juniper

### **Typical Profile**

0 to 5 inches—cobbly loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); granular; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Midraw Soil**

*Position on landscape:* South-facing side slopes of hills

*Parent material:* Kind—residuum and colluvium

influenced by loess and volcanic ash; source—rhyolite, andesite, and tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, mountain big sagebrush, basin wildrye, Thurber needlegrass, invading Utah juniper

### **Typical Profile**

0 to 6 inches—very cobbly loam; 30 to 40 percent cobbles and stones and 30 to 60 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-2

6 to 16 inches—gravelly clay, gravelly clay loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); prismatic structure; hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-7

16 to 31 inches—indurated duripan

31 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 14 to 20 inches

*Depth to bedrock:* 22 to 35 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.9 to 2.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, north-facing side slopes of hills

*Contrasting features:* Deep soils with a thick, dark surface layer

*Distinctive present vegetation:* Mountain big sagebrush, snowberry

#### **Inclusion 2**

*Position on landscape:* Concave inset fans

*Contrasting features:* Very deep soils that receive additional soil moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Inclusion 3**

*Position on landscape:* Concave, north-facing side slopes of fan piedmont remnants

*Contrasting features:* Very deep soils that have slopes of 15 to 30 percent

*Distinctive present vegetation:* Mountain big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Midraw soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Chiara Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—piping, thin layer

### **Ratings of the Trunk Soil for Selected Uses**

*Range seeding:* Fair—droughty, too arid, large stones

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Midraw Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—cemented pan, slope, small stones

*Shallow excavations:* Severe—cemented pan, slope, depth to bedrock

*Local roads and streets:* Severe—cemented pan, slope, shrink-swell

*Roadfill:* Poor—depth to bedrock, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones, too clayey

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Chiara soil—IVs, irrigated, and VIIs, nonirrigated; Trunk soil—VIIe, nonirrigated;

Midraw soil—VIIs, nonirrigated

*Range site:* Chiara soil—024X005N; Trunk soil—024X005N; Midraw soil—024X028N

## **286—Chiara-Jenor association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,200 to 5,600 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Chiara fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—45 percent

- Jenor fine sandy loam, 2 to 8 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—40 percent

#### **Contrasting inclusions:**

- Inclusion 1: Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—10 percent

- Inclusion 2: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Chiara Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Loamy mixed alluvium capped by loess high in volcanic ash

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, pine bluegrass, spiny hopsage

### **Typical Profile**

0 to 5 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated

Unified classification—SM; estimated AASHTO classification—A-4

5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 inches—indurated duripan; massive; extremely hard, very firm

### Soil and Water Features

*Depth to hardpan:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.4 to 2.8 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Jenor Soil

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Loamy mixed alluvium influenced by loess

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 6 inches—fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4

6 to 16 inches—fine sandy loam, loam; 0 to 5 percent cobbles and stones and 5 to 25 percent pebbles (by weight); subangular blocky structure; soft, very hard, friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-4

16 to 26 inches—fine sandy loam, sandy loam, gravelly loam; 0 to 5 percent cobbles and stones and 10 to 40 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline

(8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4, A-2

26 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### Soil and Water Features

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 2.9 to 3.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave inset fan remnants and fan drainageways

*Contrasting features:* Very deep soils

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Concave inset fans

*Contrasting features:* Very deep soils that receive additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, basin big sagebrush, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Jenor soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Chiara Soil for Selected Uses

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Local roads and streets:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—piping, thin layer

#### **Ratings of the Jenor Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—piping, area reclaim

#### **Interpretive Groups**

*Capability classification:* Chiara soil—Ive, irrigated, and VIIs, nonirrigated; Jenor soil—IIle, irrigated, and VIIs, nonirrigated

*Range site:* Chiara soil—024X005N; Jenor soil—024X002N

### **290—Creemon silt loam, 0 to 2 percent slopes**

#### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent
- Inclusion 3: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

#### **Characteristics of the Creemon Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass

#### **Typical Profile**

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Smooth upper margins of fan skirts

*Contrasting features:* Fine sandy loam throughout the soil profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth lower margins of fan skirts adjacent to alluvial flats

*Contrasting features:* Finer textured throughout the soil profile

*Distinctive present vegetation:* Shadscale and bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Adjacent smooth insert fans and fan drainageways

*Contrasting features:* Lacks layer of silica cementation and receives additional soil moisture from shallow, low-velocity runoff

*Distinctive present vegetation:* Winterfat, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Septic tank absorption fields:* Moderate—percs slowly

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **291—Creemon silt loam, 2 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent

- Inclusion 2: Whirlo silt loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—3 percent

- Inclusion 3: Wholan stony fine sandy loam, 2 to 4 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—3 percent

### **Characteristics of the Creemon Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass

### **Typical Profile**

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent

pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid  
*Available water capacity:* 9.7 to 11.6 inches  
*Water-supplying capacity:* 7 inches

*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth upper margins of fan skirts  
*Contrasting features:* Fine sandy loam throughout the soil profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Smooth fan drainageways and adjacent to channels on inset fans  
*Contrasting features:* Very gravelly substrata  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Adjacent smooth inset fans  
*Contrasting features:* Stones cover about 1 percent of the surface  
*Distinctive present vegetation:* Winterfat, Indian ricegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—thin layer  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt, slope  
*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIe, irrigated, and VIIc, nonirrigated  
*Range site:* 024X002N

## 292—Creemon silt loam, 0 to 2 percent slopes, occasionally flooded

### Map Unit Setting

*Position on landscape:* Inset fans  
*Elevation:* 4,400 to 5,000 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Creemon silt loam, 0 to 2 percent slopes, occasionally flooded—Duric Camborthids, coarse-silty, mixed, mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent
- Inclusion 3: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### Characteristics of the Creemon Soil

*Position on landscape:* Inset fans  
*Parent material:* Silty mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Winterfat, saltbush, bud sagebrush, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

- 0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 15 to 28 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 28 to 60 inches or more—stratified very fine sandy loam to silt loam; massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

- Depth to seasonal high water table:* More than 60 inches
- Frequency of flooding:* Frequency—occasional; duration—very brief; months—February through June
- Permeability:* Moderate
- Available water capacity:* 11.4 to 12.6 inches
- Water-supplying capacity:* 7 inches
- Runoff:* Slow
- Hydrologic group:* B
- Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5
- Hazard of erosion:* By water—slight; by wind—slight
- Shrink-swell potential:* Low
- Corrosivity:* To steel—high; to concrete—moderate
- Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Smooth higher margins adjacent to fan skirts

*Contrasting features:* Fine sandy loam throughout the soil profile

*Distinctive present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

**Inclusion 2**

*Position on landscape:* Smooth lower margins adjacent to fan skirts

*Contrasting features:* Finer textured subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Smooth inset fans adjacent to channels

*Contrasting features:* Lacks layer of silica accumulation and receives additional soil moisture from shallow, low-velocity runoff

*Distinctive present vegetation:* Winterfat, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, flooding

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X014N

**293—Creemon silt loam, strongly saline, 0 to 2 percent slopes****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

## Composition

### Major components:

- Creemon silt loam, strongly saline, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—85 percent

### Contrasting inclusions:

- Inclusion 1: Batan silt loam, slightly saline, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—10 percent
- Inclusion 2: Broyles very fine sandy loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

## Characteristics of the Creemon Soil

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, spiny hopsage

## Typical Profile

- 0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (more than 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (more than 16 mmhos/cm); strongly sodic (SAR 46 to 55); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (more than 16 mmhos/cm); strongly sodic (SAR 46 to 55); estimated Unified classification—SM; estimated AASHTO classification—A-4

## Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

## Contrasting Inclusions

### Inclusion 1

*Position on landscape:* Smooth alluvial flat remnants at lower margins of fan skirts

*Contrasting features:* Surface layer is slightly saline and soil is moderately well drained

*Distinctive present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

### Inclusion 2

*Position on landscape:* Upper part of fan skirts

*Contrasting features:* Fine sandy loam throughout the soil profile

*Distinctive present vegetation:* Black greasewood, shadscale

## Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

## Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Excess salt, erodes easily

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

**294—Creemon-Orovada-Broyles association****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Creemon very fine sandy loam, 2 to 4 percent slopes, occasionally flooded—Duric Camborthids, coarse-silty, mixed, mesic—30 percent
- Orovada very fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—30 percent
- Broyles very fine sandy loam, 2 to 4 percent slopes, frequently flooded—Duric Camborthids, coarse-loamy, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Haplargids, 4 to 8 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—10 percent
- Inclusion 2: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

**Characteristics of the Creemon Soil**

*Position on landscape:* Lower fan skirts

*Parent material:* Mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Winterfat, bud sagebrush, halogeton, bottlebrush squirreltail

**Typical Profile**

- 0 to 10 inches—very fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 28 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

28 to 60 inches or more—stratified very fine sandy loam to silt loam; massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Frequency—occasional; duration—very brief; months—February through June

*Permeability:* Moderate

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

**Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirt remnants

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

- 0 to 8 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4
- 20 to 60 inches or more—stratified fine sandy loam to

silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Broyles Soil

*Position on landscape:* Upper fan skirts  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—smooth to slightly convex  
*Dominant present vegetation:* Winterfat, halogeton, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 5 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 5 to 14 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; soft, very friable; strongly alkaline (pH 8.8); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 14 to 60 inches or more—gravelly fine sandy loam; 30 to 45 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Frequency—frequent; duration—very brief; months—December through May  
*Permeability:* Moderately rapid  
*Available water capacity:* 5.9 to 7.7 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent nonburied fan piedmont remnants  
*Contrasting features:* Layer of clay accumulation  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Adjacent inset fans  
*Contrasting features:* Very gravelly substratum  
*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Creemon soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings of the Creemon Soil for Selected Uses

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping, excess salt

**Ratings of the Orovada Soil for Selected Uses***Range seeding:* Fair—too arid*Daily cover for landfill:* Good*Shallow excavations:* Slight*Local roads and streets:* Moderate—frost action*Roadfill:* Good*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Fair—small stones*Pond reservoir areas:* Moderate—seepage, slope*Embankments, dikes, and levees:* Severe—piping**Ratings of the Broyles Soil for Selected Uses***Range seeding:* Poor—too arid, excess salt*Daily cover for landfill:* Fair—small stones*Shallow excavations:* Moderate—flooding*Local roads and streets:* Severe—flooding*Roadfill:* Good*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Fair—small stones, thin layer*Pond reservoir areas:* Moderate—seepage, slope*Embankments, dikes, and levees:* Severe—piping**Interpretive Groups***Capability classification:* Cremon soil—IIw, irrigated, and VIIw, nonirrigated; Orovada soil—Ile, irrigated, and VIc, nonirrigated; Broyles soil—IIw, irrigated, and VIIw, nonirrigated*Range site:* Cremon soil—024X014N; Orovada soil—024X020N; Broyles soil—024X014N**295—Cremon-Cren association****Map Unit Setting***Position on landscape:* Fan skirts and inset fans*Elevation:* 4,800 to 5,000 feet*Average annual precipitation:* About 7 inches*Average annual air temperature:* About 48 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

- Cremon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—55 percent
- Cren silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-silty, mixed (calcareous), mesic—30 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Typic Torriorthents, 0 to 2 percent

slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

**Characteristics of the Cremon Soil***Position on landscape:* Slightly dissected fan skirts*Parent material:* Silty mixed alluvium influenced by volcanic ash*Slope features:* Length—long; shape—smooth*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail**Typical Profile**

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—SM; estimated AASHTO classification—A-4

**Soil and Water Features***Depth to seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid*Available water capacity:* 9.7 to 11.6 inches*Water-supplying capacity:* 7 inches*Runoff:* Very slow*Hydrologic group:* B*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Cren Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 26 inches—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

26 to 60 inches or more—stratified fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Active channels on lower part of inset fans

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, black greasewood

#### **Inclusion 2**

*Position on landscape:* Fan drainageways

*Contrasting features:* Strongly salt- and sodium-affected surface layer

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 3**

*Position on landscape:* Active channels on higher part of fan skirt and inset fans

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Wyoming big sagebrush, black greasewood, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### **Wildlife habitat elements:**

*Suitability of the Cremon soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Cren soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### **Ratings of the Cremon Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

### **Ratings of the Cren Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

### **Interpretive Groups**

*Capability classification:* Cremon soil—IIc, irrigated, and VIIc, nonirrigated; Cren soil—IIc, irrigated, and VIIc, nonirrigated

*Range site:* Cremon soil—024X002N; Cren soil—024X002N

**296—Creemon-Hessing association****Map Unit Setting**

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 4,700 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—65 percent
- Hessing silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-silty, mixed, mesic—8 percent
- Inclusion 2: Duric Camborthids, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent
- Inclusion 3: Typic Camborthids, 0 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—3 percent

**Characteristics of the Creemon Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

**Typical Profile**

- 0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent

pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—SM; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

**Characteristics of the Hessing Soil**

*Position on landscape:* Inset fans

*Parent material:* Alluvium and loess with some influence of volcanic ash over coarse mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bug sagebrush, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

- 0 to 4 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4
- 4 to 11 inches—silt loam, silty clay loam; prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 11 to 18 inches—very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 9.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4
- 18 to 30 inches—gravelly loam; 35 to 45 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-4
- 30 to 60 inches or more—stratified very gravelly loamy

coarse sand to extremely gravelly sand; 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 30 inches—moderate; below this depth—very rapid  
*Available water capacity:* 6.0 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—3; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent to channels  
*Contrasting features:* Receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, spiny hopsage

#### Inclusion 2

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Receives additional soil moisture from shallow, low-velocity surface flow  
*Distinctive present vegetation:* Shadscale, bud sagebrush, winterfat

#### Inclusion 3

*Position on landscape:* Upper margins of fan skirts  
*Contrasting features:* Very gravelly throughout the soil profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Cremon soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Hessing soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

### Ratings of the Cremon Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping

### Ratings of the Hessing Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Poor—seepage, small stones  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage, excess salt

### Interpretive Groups

*Capability classification:* Cremon soil—IIC, irrigated, and VIIc, nonirrigated; Hessing soil—IIs, irrigated, and VIIs, nonirrigated  
*Range site:* Cremon soil—024X002N; Hessing soil—024X002N

## 297—Cremon-Orovada-Tulase association

### Map Unit Setting

*Position on landscape:* Fan skirts and inset fans  
*Elevation:* 5,500 to 5,800 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Cremon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—45 percent
  - Orovada very fine sandy loam, 0 to 2 percent slopes, rarely flooded—Durixerollic Camborthids, coarse-loamy, mixed, mesic—20 percent
  - Tulase very fine sandy loam, 0 to 2 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Batan very fine sandy loam, 0 to 2 percent

slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

• Inclusion 2: Xeric Torriorthents, 0 to 2 percent

slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

• Inclusion 3: Durixerollic Camborthids, 0 to 4 percent

slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Creemon Soil**

*Position on landscape:* Stable, lower fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Orovada Soil**

*Position on landscape:* Inset fans

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, downy rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 8.6 to 9.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Tulase Soil**

*Position on landscape:* Upper fan skirts

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

**Dominant present vegetation:** Wyoming big sagebrush, bottlebrush squirreltail, bluebunch wheatgrass

### Typical Profile

- 0 to 6 inches—very fine sandy loam; platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 6 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

### Soil and Water Features

**Depth to seasonal high water table:** More than 60 inches  
**Frequency of flooding:** None  
**Permeability:** Moderate  
**Available water capacity:** 9.0 to 12.4 inches  
**Water-supplying capacity:** 8 inches  
**Runoff:** Very slow  
**Hydrologic group:** B  
**Erosion factors (surface layer):** K value—.43; T value—5; wind erodibility group—3  
**Hazard of erosion:** By water—slight; by wind—slight  
**Shrink-swell potential:** Low  
**Corrosivity:** To steel—high; to concrete—low  
**Potential frost action:** Moderate

### Contrasting Inclusions

#### Inclusion 1

**Position on landscape:** Convex lower margins of fan skirts  
**Contrasting features:** Strongly salt- and sodium-affected surface layer  
**Distinctive present vegetation:** Shadscale, black greasewood

#### Inclusion 2

**Position on landscape:** Adjacent to stream channels  
**Contrasting features:** Receives additional soil moisture from runoff  
**Distinctive present vegetation:** Basin big sagebrush, black greasewood

#### Inclusion 3

**Position on landscape:** Adjacent convex beach terrace remnants  
**Contrasting features:** Very gravelly throughout the soil profile  
**Distinctive present vegetation:** Wyoming big sagebrush, spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

**Suitability of the Creemon soil for named elements:** Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

**Suitability of the Orovada soil for named elements:** Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Suitability of the Tulse soil for named elements:** Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Creemon Soil for Selected Uses

**Range seeding:** Poor—too arid, excess salt  
**Daily cover for landfill:** Good  
**Shallow excavations:** Slight  
**Local roads and streets:** Slight  
**Roadfill:** Good  
**Sand:** Improbable source—excess fines  
**Gravel:** Improbable source—excess fines  
**Topsoil:** Poor—thin layer  
**Pond reservoir areas:** Moderate—seepage  
**Embankments, dikes, and levees:** Severe—piping

### Ratings of the Orovada Soil for Selected Uses

**Range seeding:** Fair—too arid  
**Daily cover for landfill:** Good  
**Shallow excavations:** Slight  
**Local roads and streets:** Moderate—frost action, flooding  
**Roadfill:** Good  
**Sand:** Improbable source—excess fines  
**Gravel:** Improbable source—excess fines  
**Topsoil:** Fair—small stones, thin layer  
**Pond reservoir areas:** Moderate—seepage  
**Embankments, dikes, and levees:** Severe—piping

### Ratings of the Tulse Soil for Selected Uses

**Range seeding:** Fair—too arid  
**Daily cover for landfill:** Good  
**Shallow excavations:** Slight  
**Local roads and streets:** Moderate—frost action  
**Roadfill:** Good  
**Sand:** Improbable source—excess fines  
**Gravel:** Improbable source—excess fines  
**Topsoil:** Good  
**Pond reservoir areas:** Moderate—seepage  
**Embankments, dikes, and levees:** Severe—piping

### Interpretive Groups

**Capability classification:** Creemon soil—IIc, irrigated, and VIIc, nonirrigated; Orovada soil—IIc, irrigated, and VIc, nonirrigated; Tulse soil—IIc, irrigated, and VIc, nonirrigated

*Range site:* Creemon soil—024X002N; Orovada soil—024X005N; Tulase soil—024X005N

## 298—Creemon-Misad association

### **Map Unit Setting**

*Position on landscape:* Basin floor and beach terraces

*Elevation:* 5,000 to 5,100 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—60 percent

- Misad gravelly sandy loam, 2 to 4 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Duric Camborthids, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—6 percent

- Inclusion 2: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

- Inclusion 4: Durorthidic Xeric Torriorthents, 0 to 2 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—2 percent

### **Characteristics of the Creemon Soil**

*Position on landscape:* Beach terrace

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR 2 to 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt

loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 30); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 45 inches—moderate; below this depth—moderately rapid

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Misad Soil**

*Position on landscape:* Offshore bars

*Parent material:* Gravelly stratified lacustrine sediments influenced by volcanic ash

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—gravelly sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-1, A-2

7 to 31 inches—stratified fine sandy loam to very gravelly sandy loam; 5 to 10 percent cobbles and stones and 40 to 60 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-1, A-2

31 to 60 inches or more—very gravelly loamy sand to

extremely gravelly coarse sand; 5 to 10 percent cobbles and stones and 60 to 80 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 31 inches—moderately rapid; below this depth—rapid  
*Available water capacity:* 2.9 to 4.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial flat remnants between bars  
*Contrasting features:* Fine sandy loam throughout the soil profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### Inclusion 2

*Position on landscape:* Alluvial flats along lower part of unit  
*Contrasting features:* Silty clay loam subsoil, moderately well drained  
*Distinctive present vegetation:* Shadscale, bud sagebrush, black greasewood

#### Inclusion 3

*Position on landscape:* Concave, narrow inset fans dissecting offshore bars  
*Contrasting features:* Receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 4

*Position on landscape:* Fan skirt margins on upper part of unit  
*Contrasting features:* Receives additional soil moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### Wildlife habitat elements:

*Suitability of the Creemon soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Misad soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Creemon Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Misad Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Poor—seepage, small stones, too sandy  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* Creemon soil—IIc, irrigated, and VIIc, nonirrigated; Misad soil—IIIe, irrigated, and VIIs, nonirrigated

*Range site:* Creemon soil—024X002N; Misad soil—024X002N

### 300—Cren silt loam

#### Map Unit Setting

*Position on landscape:* Fan skirts  
*Elevation:* 4,800 to 5,100 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Cren silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-silty, mixed (calcareous), mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—6 percent
- Inclusion 2: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 3: Hessian silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 4: Pumper silt loam, 0 to 2 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—3 percent

### **Characteristics of the Cren Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 26 inches—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

26 to 60 inches or more—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent lower inset fans

*Contrasting features:* Noncalcareous subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth upper margins of fan skirts

*Contrasting features:* Coarser textured throughout the soil profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Adjacent, smooth, upper inset fans

*Contrasting features:* Gravelly substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 4**

*Position on landscape:* Areas adjacent to stream channels

*Contrasting features:* Very gravelly throughout the soil profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features of the Cren Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated  
*Range site:* 024X002N

## **303—Cren-Doowak-Relley association**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,400 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Cren silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-silty, mixed (calcareous), mesic—40 percent
  - Doowak very gravelly loamy sand, 0 to 2 percent slopes—Xeric Torriorthents, sandy-skeletal, mixed, mesic—25 percent
  - Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Raglan silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—6 percent
  - Inclusion 2: Xeric Torriorthents 0 to 2 percent slopes, frequently flooded—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
  - Inclusion 3: Xeric Torriorthents 0 to 2 percent slopes, frequently flooded—Xeric Torriorthents, sandy-skeletal, mixed, mesic—4 percent

### **Characteristics of the Cren Soil**

*Position on landscape:* Upper part of fan skirts  
*Parent material:* Mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard,

very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 26 inches—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

26 to 60 inches or more—stratified fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Doowak Soil**

*Position on landscape:* Adjacent inset fans  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Typical Profile**

0 to 6 inches—very gravelly loamy sand; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

6 to 60 inches or more—stratified extremely gravelly sand to extremely gravelly loamy sand; 5 to 10 percent cobbles and stones and 75 to 90 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GP; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very rapid  
*Available water capacity:* 1.9 to 3.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Characteristics of the Relley Soil**

*Position on landscape:* Lower part of fan skirts  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

**Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 30); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Lower margin of fan skirt

*Contrasting features:* Loam substrata

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Concave stringers adjacent to channels

*Contrasting features:* Receives additional moisture from runoff and flooding

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush

**Inclusion 3**

*Position on landscape:* Areas adjacent to deep channels

*Contrasting features:* Receives additional moisture from runoff and flooding

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Cren soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Doowak soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Relley soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Cren Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

**Ratings of the Doowak Soil for Selected Uses**

*Range seeding:* Poor—too sandy, droughty, small stones

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

**Ratings of the Relley Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

**Interpretive Groups**

*Capability classification:* Cren soil—IIc, irrigated, and VIIc, nonirrigated; Doowak soil—VIIc, nonirrigated; Relley soil—IIc, irrigated, and VIIc, nonirrigated

*Range site:* Cren soil—024X002N; Doowak soil—024X020N; Relley soil—024X002N

**304—Cren-Raglan-Batan association****Map Unit Setting**

*Position on landscape:* Fan skirts and alluvial flats

*Elevation:* 4,700 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Cren silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-silty, mixed (calcareous), mesic—60 percent
- Raglan silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—20 percent
- Batan silt loam, 0 to 2 percent slopes—Durorthidic

Torriorthents, fine-silty, mixed (calcareous), mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Camborthids, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Cren Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

**Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 26 inches—silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

26 to 60 inches or more—stratified fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

**Characteristics of the Raglan Soil**

*Position on landscape:* Higher parts of alluvial flat remnants

*Parent material:* A loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Bud sagebrush, shadscale

### Typical Profile

- 0 to 6 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 6 to 14 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6
- 14 to 60 inches or more—stratified very fine sandy loam to silty clay loam; 0 to 15 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-4, A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 9.6 to 11.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Batan Soil

*Position on landscape:* Lower parts of alluvial flat remnants  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### Typical Profile

- 0 to 5 inches—silt loam; platy structure; hard, very friable; very strongly alkaline (pH 9.4); strongly saline (more than 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4
- 5 to 68 inches or more—stratified silt loam to silty clay

loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 11.3 to 12.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave areas adjacent to channels  
*Contrasting features:* Sandy loam substratum  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Cren soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Raglan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Cren Soil for Selected Uses

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt

**Ratings of the Raglan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

**Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

**Interpretive Groups**

*Capability classification:* Cren soil—IIc, irrigated, and VIIc, nonirrigated; Raglan soil—IIc, irrigated, and VIIc, nonirrigated; Batan soil—IIIs, irrigated, and VIIs, nonirrigated

*Range site:* Cren soil—024X002N; Raglan soil—024X002N; Batan soil—024X003N

**310—Davey fine sandy loam****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Davey fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—10 percent
- Inclusion 2: Orovada fine sandy loam, 0 to 2 percent

slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Davey Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Basin big sagebrush, spiny hopsage, needleandthread, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

0 to 5 inches—fine sandy loam; platy structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

5 to 20 inches—fine sandy loam; subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

20 to 60 inches or more—loamy fine sand, fine sand; 0 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—moderately rapid; below this depth—rapid

*Available water capacity:* 4.4 to 5.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Rounded and undulating dunes overplacing fan skirts

*Contrasting features:* Sandy throughout the soil profile

*Distinctive present vegetation:* Indian ricegrass, basin big sagebrush

**Inclusion 2**

*Position on landscape:* Smooth fan skirt remnants

*Contrasting features:* Loamy throughout the soil

*Distinctive present vegetation:* Wyoming big sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, piping

*Drainage:* Deep to water

*Irrigation:* Droughty, soil blowing

*Terraces and diversions:* Too sandy, soil blowing

**Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIc, nonirrigated

*Range site:* 024X017N

**312—Davey fine sandy loam, cemented substratum****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

• Davey fine sandy loam, cemented substratum, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—85 percent

**Contrasting inclusions:**

• Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

• Inclusion 2: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—5 percent

• Inclusion 3: Orovada fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Davey Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Big sagebrush, spiny hopsage, kochia

**Typical Profile**

0 to 20 inches—fine sandy loam; prismatic structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

20 to 50 inches—loamy fine sand; 0 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

50 to 60 inches—strongly cemented duripan

**Soil and Water Features**

*Depth to hardpan:* 50 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Above the hardpan—rapid

*Available water capacity:* 4.4 to 5.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—3; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Lower fan skirt margins

*Contrasting features:* Silty subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Dunes overplacing fan skirts

*Contrasting features:* Sandy throughout the soil profile

*Distinctive present vegetation:* Basin big sagebrush

**Inclusion 3**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, Thurber needlegrass

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops

(irrigated)—fair; domestic grasses and legumes

(irrigated)—fair; wild herbaceous plants

(nonirrigated)—fair; shrubs (nonirrigated)—fair;

wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing

*Daily cover for landfill:* Fair—too sandy, cemented pan, thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Fair—thin layer

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer, small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Soil blowing, excess salt

*Terraces and diversions:* Soil blowing

**Interpretive Groups**

*Capability classification:* IIIs, irrigated, and VIc, nonirrigated

*Range site:* 024X017N

**313—Davey-Goldrun complex****Map Unit Setting**

*Position on landscape:* Sand sheets

*Elevation:* 4,800 to 5,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition***Major components:*

• Davey fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—65 percent

• Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—25 percent

*Contrasting inclusions:*

• Inclusion 1: Orovada very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—10 percent

**Characteristics of the Davey Soil**

*Position on landscape:* Sand sheets

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, spiny hopsage, bottlebrush squirreltail, cheatgrass, Wyoming big sagebrush

**Typical Profile**

0 to 5 inches—fine sandy loam; platy structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

5 to 20 inches—fine sandy loam; subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

20 to 60 inches or more—loamy fine sand, fine sand; 0 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—moderately rapid; below this depth—rapid

*Available water capacity:* 4.4 to 5.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Goldrun Soil**

*Position on landscape:* Dunes

*Parent material:* Sandy eolian materials influenced by volcanic ash

*Slope features:* Length—short; shape—undulating

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Indian ricegrass, spiny hopsage

#### **Typical Profile**

0 to 7 inches—fine sand; massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

7 to 60 inches or more—fine sand; massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.2 to 5.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—slight; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave inset fans dissecting sand sheets

*Contrasting features:* Loamy subsoil

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability of the Davey soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—very poor; shallow water areas—very poor

*Suitability of the Goldrun soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—very poor; shallow water areas—very poor

### **Ratings and Restrictive Features of the Davey Soil for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, piping

*Drainage:* Deep to water

*Irrigation:* Droughty, soil blowing

*Terraces and diversions:* Too sandy, soil blowing

### **Ratings and Restrictive Features of the Goldrun Soil for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing, too sandy

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, seepage

*Drainage:* Deep to water

*Irrigation:* Droughty, fast intake, soil blowing

*Terraces and diversions:* Too sandy, soil blowing

### **Interpretive Groups**

*Capability classification:* Davey soil—IIIs, irrigated, and VIc, nonirrigated; Goldrun soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Davey soil—024X017N; Goldrun soil—024X001N

## **340—Duffer very fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,500 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Duffer very fine sandy loam, 0 to 2 percent slopes—Aquic Calciorthids, fine-silty, carbonatic, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Sombrero very fine sandy loam, 0 to 2 percent slopes—Aquentic Durorthids, loamy, mixed, mesic, shallow—6 percent
- Inclusion 2: Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—3 percent
- Inclusion 3: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 4: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—3 percent

### **Characteristics of the Duffer Soil**

*Position on landscape:* Flood plain remnants

*Parent material:* Mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Rubber rabbitbrush, alkali sacaton, inland saltgrass, iodinebush

### **Typical Profile**

- 0 to 4 inches—very fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (30 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4
- 4 to 29 inches—silt loam, silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 29 to 60 inches or more—stratified very fine sandy loam to silty clay loam; massive; slightly hard and hard, friable and firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CL-ML; estimated AASHTO classification—A-4, A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 10.0 to 12.4 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Irregularly shaped areas on adjacent stream terraces

*Contrasting features:* Strongly cemented duripan within a depth of 20 inches

*Distinctive present vegetation:* Black greasewood, basin wildrye, inland saltgrass

#### **Inclusion 2**

*Position on landscape:* Outer margins of flood plains

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Black greasewood, basin wildrye, inland saltgrass

#### **Inclusion 3**

*Position on landscape:* Adjacent alluvial flat remnants

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 4**

*Position on landscape:* Lower flood plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Basin wildrye, creeping wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Fair—wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Fair—low strength, wetness, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—wetness, excess salt

*Drainage:* Frost action, excess salt

*Irrigation:* Wetness, soil blowing, erodes easily

*Terraces and diversions:* Erodes easily, wetness, soil blowing

### ***Interpretive Groups***

*Capability classification:* VIw, irrigated; VIIw, nonirrigated

*Range site:* 024X010N

## **370—Enko fine sandy loam, 2 to 8 percent slopes**

### ***Map Unit Setting***

*Position on landscape:* Fan skirts

*Elevation:* 4,700 to 5,200 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 8 degrees F

*Frost-free season:* About 110 days

### ***Composition***

*Major components:*

- Enko fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Goldrun fine sand—Xeric Torripsamments, mixed, mesic—10 percent

### ***Characteristics of the Enko Soil***

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

### ***Typical Profile***

0 to 7 inches—fine sandy loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

7 to 15 inches—loam, sandy loam, fine sandy loam; 0 to 15 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

15 to 60 inches or more—sandy loam, loam, fine sandy loam; 0 to 25 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-2, A-4

### ***Soil and Water Features***

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.4 to 8.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### ***Contrasting Inclusions***

#### ***Inclusion 1***

*Position on landscape:* Sand sheets overplacing fan skirts

*Contrasting features:* Sandy throughout the soil profile

*Distinctive present vegetation:* Basin big sagebrush, Indian ricegrass

### ***Major Uses***

**Current uses:** Rangeland, wildlife habitat

#### ***Wildlife habitat elements:***

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### ***Ratings for Selected Uses***

*Range seeding:* Fair—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* IVE, irrigated, and VIs,  
 nonirrigated

*Range site:* Enko soil—024X005N

## **371—Enko-Shabliss-Orovada association**

### **Map Unit Setting**

*Position on landscape:* Piedmonts slopes

*Elevation:* 4,800 to 5,500 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Enko fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—60 percent
- Shabliss very fine sandy loam, 15 to 30 percent slopes—Haploxerollic Durorthids, loamy, mixed, mesic, shallow—15 percent
- Orovada very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torripsamments, 8 to 15 percent slopes—Xeric Torripsamments, mixed, mesic—10 percent

### **Characteristics of the Enko Soil**

*Position on landscape:* Fan aprons overlaping fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### **Typical Profile**

0 to 7 inches—fine sandy loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

7 to 15 inches—loam, sandy loam, fine sandy loam; 0 to 15 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4

mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

15 to 60 inches or more—sandy loam, loam, fine sandy loam; 0 to 25 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-2, A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.4 to 8.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Shabliss Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 16 inches—very fine sandy loam, loam, silt loam; 0 to 5 percent cobbles and stones and 0 to 5 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

16 to 34 inches—strongly cemented duripan; platy structure; very hard, very firm

34 to 60 inches or more—loamy sand, gravelly loamy sand; 0 to 5 percent cobbles and stones and 20 to

40 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 12 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.7 to 3.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—3  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Orovida Soil

*Position on landscape:* Fan skirts  
*Parent material:* Loess capped mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Sandberg bluegrass

### Typical Profile

0 to 8 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Sand sheets and sand dunes overplacing fan skirts  
*Contrasting features:* Sandy throughout the soil profile  
*Distinctive present vegetation:* Indian ricegrass, basin big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Enko soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Shabliss soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Orovida soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Enko Soil for Selected Uses

*Range seeding:* Fair—too arid, excess salt  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—frost action  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—poor—excess salt  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Shabliss Soil for Selected Uses

*Range seeding:* Fair—too arid, cemented pan  
*Daily cover for landfill:* Poor—cemented pan, slope  
*Shallow excavations:* Severe—cemented pan, cutbanks cave, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Fair—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—cemented pan, slope

*Pond reservoir areas:* Severe—seepage, cemented pan, slope

*Embankments, dikes, and levees:* Severe—piping, seepage

#### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

#### **Interpretive Groups**

*Capability classification:* Enko soil—IVe, irrigated, and VIs, nonirrigated; Shabliss soil—VIIe, nonirrigated; Orovada soil—IIIe, irrigated, and VIc, nonirrigated

*Range site:* Enko soil—024X005N; Shabliss soil—024X005N; Orovada soil—024X020N

### **400—Glean-Walti-Cleavage association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,600 to 8,000 feet

*Average annual precipitation:* About 13 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 60 days

#### **Composition**

##### **Major components:**

- Glean gravelly loam, 30 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—40 percent
- Walti gravelly loam, 15 to 30 percent slopes—Aridic Argixerolls, fine, montmorillonitic, frigid—25 percent
- Cleavage extremely gravelly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—20 percent

##### **Contrasting inclusions:**

- Inclusion 1: Aridic Argixerolls, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—6 percent
- Inclusion 2: Rock outcrop—5 percent
- Inclusion 3: Rubble land—2 percent
- Inclusion 4: Pachic Haploxerolls, 15 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent

#### **Characteristics of the Glean Soil**

*Position on landscape:* Side slopes of mountains

*Parent material:* Mixed colluvium and residuum

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, rubber rabbitbrush, arrowleaf balsamroot, bluebunch wheatgrass

*Surface cover:* 20 percent pebbles, 1 percent cobbles

#### **Typical Profile**

0 to 6 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4

6 to 49 inches—very gravelly loam, very gravelly sandy loam; 0 to 25 percent cobbles and stones and 40 to 75 percent pebbles (by weight); massive; soft, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

49 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.1 to 5.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Walti Soil**

*Position on landscape:* Shoulders and upper side slopes of mountains at higher elevations

*Parent material:* Kind—residuum and colluvium; source—rhyolitic tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, Idaho fescue, bluebunch wheatgrass

#### **Typical Profile**

0 to 4 inches—gravelly loam; 5 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm);

nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC, CL-ML; estimated AASHTO classification—A-4

4 to 10 inches—gravelly clay loam, clay loam; 0 to 10 percent cobbles and stones and 10 to 35 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

10 to 30 inches—clay, gravelly clay; 0 to 10 percent cobbles and stones and 10 to 35 percent pebbles (by weight); prismatic structure; very hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH, MH; estimated AASHTO classification—A-7

30 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.7 to 4.8 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crests of mountains

*Parent material:* Kind—gravelly residuum; source—rhyolitic tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, Idaho fescue

#### **Typical Profile**

0 to 4 inches—extremely gravelly loam; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 0 to 45

percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Convex back slopes of mountains

*Contrasting features:* Loamy soils with bedrock at a depth of 20 to 40 inches

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

##### **Inclusion 2**

*Position on landscape:* Rimrock on shoulder slopes of mountains and scattered peaks

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

##### **Inclusion 3**

*Position on landscape:* Side slopes of mountains below rock outcrop

*Contrasting features:* More than 90 percent stones on the soil surface

*Distinctive present vegetation:* Barren

##### **Inclusion 4**

*Position on landscape:* Concave snow pockets on side slopes of mountains below shoulders

*Contrasting features:* Receives additional soil moisture from drifted snow

*Distinctive present vegetation:* Snowberry, mountain big sagebrush, currant, mountain brome

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Glean soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Walti soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Glean Soil for Selected Uses**

*Range seeding:* Fair—droughty, small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope, seepage

*Embankments, dikes, and levees:* Severe—seepage

**Ratings of the Walti Soil for Selected Uses**

*Range seeding:* Fair—erodes easily, rooting depth

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, slope, shrink-swell

*Roadfill:* Poor—depth to bedrock, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer, hard to pack

**Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

**Interpretive Groups**

*Capability classification:* Glean soil—VIIe, nonirrigated;

Walti soil—VIIe, nonirrigated; Cleavage soil—VIIs, nonirrigated

*Range site:* Glean soil—024X023N; Walti soil—024X027N; Cleavage soil—024X016N

**411—Golconda-Blackhawk association****Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Golconda very fine sandy loam, 2 to 8 percent slopes, stony—Haplic Nadurargids, fine-loamy, mixed, mesic—50 percent

- Blackhawk very fine sandy loam, 0 to 4 percent slopes—Entic Durorthids, loamy, mixed, mesic, shallow—35 percent

*Contrasting inclusions:*

- Inclusion 1: Misad very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—10 percent

- Inclusion 2: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

**Characteristics of the Golconda Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud

sagebrush, spiny hopsage, bottlebrush squirreltail

*Rock fragments on the surface:* Kind—stones; percentage of surface covered—1 percent

**Typical Profile**

0 to 8 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 27 inches—clay loam, gravelly clay loam; 10 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 25 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, GC;

estimated AASHTO classification—A-6, A-7  
 27 to 43 inches—strongly cemented duripan; massive; extremely hard, extremely firm  
 43 to 60 inches or more—very gravelly loamy coarse sand, very gravelly sandy loam; 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM, GP; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 4.2 to 5.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Characteristics of the Blackhawk Soil

*Position on landscape:* Summits of fan piedmont remnants  
*Parent material:* Loamy mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, spiny hopsage, bottlebrush squirreltail

### Typical Profile

0 to 8 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 8 to 14 inches—loam, very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); platy structure; soft, very friable; strongly alkaline (pH 9.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 14 to 17 inches—strongly cemented hardpan; massive; very hard, very firm  
 17 to 38 inches—stratified sandy loam to extremely gravelly loamy coarse sand; 10 to 30 percent pebbles (by weight); massive; slightly hard, friable;

very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

38 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 50 to 80 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GP-GM, GP, SP-SM, SP; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Above the hardpan—moderate; below the hardpan—very rapid  
*Available water capacity:* 2.2 to 2.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.43; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Inset fan remnants  
*Contrasting features:* Very deep soil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Inset fans  
*Contrasting features:* Very deep soil that receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Golconda soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Blackhawk soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings of the Golconda Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, seepage

#### **Ratings of the Blackhawk Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Moderate—cemented pan

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—seepage, excess salt

#### **Interpretive Groups**

*Capability classification:* Golconda soil—IVe, irrigated, and VIIs, nonirrigated; Blackhawk soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Golconda soil—024X002N; Blackhawk soil—024X002N

### **412—Golconda-Dun Glen association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Golconda gravelly very fine sandy loam, 4 to 8 percent slopes—Haplic Nadurargids, fine-loamy, mixed, mesic—65 percent

- Dun Glen very fine sandy loam, 2 to 4 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Haplic Nadurargids, 4 to 8 percent

slopes—Haplic Nadurargids, loamy, mixed, mesic, shallow—9 percent

- Inclusion 2: Typic Torriorthents, 2 to 4 percent slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—4 percent

- Inclusion 3: Xerollic Camborthids, 2 to 4 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

#### **Characteristics of the Golconda Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 10 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 35 to 45 percent pebbles (by weight); loam; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4

10 to 23 inches—clay loam, gravelly clay loam, silty clay loam; 10 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.6); strongly saline (more than 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

23 to 36 inches—strongly cemented duripan; massive; extremely hard, extremely firm

36 to 60 inches—very gravelly loamy coarse sand, very gravelly sandy loam; 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 4.2 to 5.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Dun Glen Soil**

*Position on landscape:* Broad inset fans  
*Parent material:* Loamy mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 3 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 3 to 10 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 10 to 60 inches or more—fine sandy loam, very fine sandy loam; 0 to 15 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 6.8 to 8.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Convex summits and shoulder slopes of fan piedmont remnants

*Contrasting features:* Duripan within a depth of 20 inches

*Distinctive present vegetation:* Downy rabbitbrush, shadscale

#### **Inclusion 2**

*Position on landscape:* Adjacent convex fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Bud sagebrush, shadscale

#### **Inclusion 3**

*Position on landscape:* Concave inset fans adjacent to channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### **Wildlife habitat elements:**

*Suitability of the Golconda soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Dun Glen soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Golconda Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan, small stones, seepage

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium, excess salt

#### **Ratings of the Dun Glen Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones

*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Golconda soil—IVe, irrigated, and VIIs, nonirrigated; Dun Glen soil—Ile, irrigated, and VIIc, nonirrigated

*Range site:* Golconda soil—024X002N; Dun Glen soil—024X002N

## **413—Golconda-Blownout land complex**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Golconda gravelly very fine sandy loam, 2 to 8 percent slopes—Haplic Nadurargids, fine-loamy, mixed, mesic—60 percent

- Blownout land—25 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 2 to 8 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—9 percent

- Inclusion 2: Typic Torriorthents, 2 to 8 percent slopes—Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

- Inclusion 3: Minat very cobbly loam, 15 to 50 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—1 percent

### **Characteristics of the Golconda Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

### **Typical Profile**

0 to 8 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and 35 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GC; estimated AASHTO classification—A-4

8 to 27 inches—clay loam, gravelly clay loam; 10 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 9.0); strongly saline

(16 to 25 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6, A-7

27 to 43 inches—strongly cemented duripan; massive; extremely hard, extremely firm

43 to 60 inches or more—extremely gravelly loamy coarse sand, very gravelly sandy loam; 50 to 85 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 36); estimated Unified classification—GP-GM, GM, GP; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 4.2 to 5.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of Blownout Land**

*Position on landscape:* Eroded depressional areas covered with a surface pavement of pebbles

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Inset fans on upper part of fan piedmont remnants

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Inset fans on lower part of fan piedmont remnants

*Contrasting features:* Very deep soils that have a very gravelly substratum

*Distinctive present vegetation:* Shadscale

#### **Inclusion 3**

*Position on landscape:* Side slopes of fan piedmont remnants near areas of deeply incised inset fans

*Contrasting features:* Slopes of 15 to 50 percent

*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Golconda soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

**Ratings of the Golconda Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, seepage, excess sodium

### Interpretive Groups

*Capability classification:* Golconda soil—Ive, irrigated, and VIIs, nonirrigated; Blownout land—VIIIs

*Range site:* Golconda soil—024X002N

## 420—Goldrun fine sand, 0 to 4 percent slopes

### Map Unit Setting

*Position on landscape:* Sand sheets on fan skirts

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Davey fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—5 percent
- Inclusion 2: Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 3: Orovada fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

### Characteristics of the Goldrun Soil

*Position on landscape:* Sand sheets on fan skirts

*Parent material:* Eolian material influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Indian ricegrass, basin big sagebrush

### Typical Profile

0 to 7 inches—fine sand; massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

7 to 60 inches or more—fine sand; massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.2 to 5.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—slight; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Nonburied fan skirts on the upper part of the unit

*Contrasting features:* High water-supplying capacity

*Distinctive present vegetation:* Big sagebrush, needleandthread

#### Inclusion 2

*Position on landscape:* Nonburied fan skirts on the lower part of the unit

*Contrasting features:* Slightly salt- and sodium-affected substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Loamy substratum

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—very poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing, too sandy

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, seepage

*Drainage:* Deep to water

*Irrigation:* Droughty, fast intake, soil blowing

*Terraces and diversions:* Too sandy, soil blowing

### **Interpretive Groups**

*Capability classification:* IVs, irrigated, and VIIs, nonirrigated

*Range site:* 024X001N

## **422—Goldrun-Old Camp association**

### **Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 4,800 to 5,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Goldrun loamy sand, 15 to 30 percent slopes—Xeric Torripsamments, mixed, mesic—50 percent
- Old Camp very cobbly loam, 4 to 8 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—35 percent

#### **Contrasting inclusions:**

- Inclusion 1: Rock outcrop—10 percent

- Inclusion 2: Orovida fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Goldrun Soil**

*Position on landscape:* Sand sheets adjacent to and overlaping parts of foothills

*Parent material:* Eolian sands

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Rubber rabbitbrush, cheatgrass

### **Typical Profile**

0 to 7 inches—loamy sand; massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

7 to 60 inches or more—fine sand; massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.2 to 5.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—2

*Hazard of erosion:* By water—slight; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Old Camp Soil**

*Position on landscape:* Crests and side slopes of foothills

*Parent material:* Kind—residuum influenced by volcanic ash; source—basalt

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, cheatgrass

### **Typical Profile**

0 to 2 inches—very cobbly loam; 25 to 55 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated

Unified classification—GM, SM, GM-GC, SM-SC;  
 estimated AASHTO classification—A-4, A-2  
 2 to 14 inches—very stony clay loam, very cobbly clay  
 loam, extremely stony clay loam; 35 to 50 percent  
 cobbles and stones and 50 to 65 percent pebbles  
 (by weight); angular blocky structure; slightly hard,  
 friable; mildly alkaline (pH 7.8); nonsaline (less than  
 2 mmhos/cm); nonsodic (SAR less than 2);  
 estimated Unified classification—GC; estimated  
 AASHTO classification—A-2, A-6  
 14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.1 to 1.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—  
 1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Rimrock and scattered peaks of  
 foothills

*Contrasting features:* Bedrock exposed at the soil  
 surface

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Inset fans

*Contrasting features:* Very deep soil that is sandy loam  
 throughout the soil profile

*Distinctive present vegetation:* Wyoming big sagebrush,  
 spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Goldrun soil for named elements:* Wild  
 herbaceous plants (nonirrigated)—fair; shrubs  
 (nonirrigated)—fair

*Suitability of the Old Camp soil for named elements:* Wild  
 herbaceous plants (nonirrigated)—fair; shrubs  
 (nonirrigated)—fair

### Ratings of the Goldrun Soil for Selected Uses

*Range seeding:* Poor—soil blowing, too sandy, erodes  
 easily

*Daily cover for landfill:* Poor—too sandy, slope  
*Shallow excavations:* Severe—cutbanks cave, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Fair—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—too sandy, slope  
*Pond reservoir areas:* Severe—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping,  
 seepage

### Ratings of the Old Camp Soil for Selected Uses

*Range seeding:* Poor—droughty, large stones  
*Daily cover for landfill:* Poor—depth to bedrock, small  
 stones  
*Shallow excavations:* Severe—depth to bedrock, large  
 stones  
*Local roads and streets:* Severe—depth to bedrock,  
 large stones  
*Roadfill:* Poor—depth to bedrock, large stones  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones  
*Pond reservoir areas:* Severe—depth to bedrock  
*Embankments, dikes, and levees:* Severe—large stones

### Interpretive Groups

*Capability classification:* Goldrun soil—IVs, irrigated, and  
 VIIs, nonirrigated; Old Camp soil—VIIs, nonirrigated  
*Range site:* Goldrun soil—024X001N; Old Camp soil—  
 024X005N

## 441—Gund-Umberland association

### Map Unit Setting

*Position on landscape:* Lake plains  
*Elevation:* 5,600 to 5,700 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Gund silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty over clayey, mixed, nonacid, mesic—50 percent
- Umberland silt loam, 0 to 2 percent slopes, nonflooded—Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic—35 percent

#### Contrasting inclusions:

- Inclusion 1: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—8 percent
- Inclusion 2: Aeric Halaquepts, 0 to 2 percent slopes—

Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—4 percent

- Inclusion 3: Playas—3 percent

### **Characteristics of the Gund Soil**

*Position on landscape:* Higher part of lake plain terraces

*Parent material:* Silty alluvium with a component of loess over lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye, rubber rabbitbrush

### **Typical Profile**

0 to 4 inches—silt loam; platy structure; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

4 to 23 inches—silt loam; platy structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6

23 to 60 inches or more—silty clay, clay; prismatic structure; hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CH; estimated AASHTO classification—A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through June—36 to 42 inches; rest of year—below 42 inches

*Frequency of flooding:* Rare

*Permeability:* Slow

*Available water capacity:* 8.6 to 10.7 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Characteristics of the Umberland Soil**

*Position on landscape:* Lower part of lake plain terraces

*Parent material:* Silty mixed lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood, bottlebrush squirreltail

### **Typical Profile**

0 to 4 inches—silt loam; platy structure; hard, friable; strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

4 to 31 inches—silty clay, silty clay loam, clay; massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

31 to 60 inches or more—silty clay, silty clay loam, clay; massive; slightly hard, friable; strongly alkaline (pH 8.5); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 9.0 to 12.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth, highest part of lake plain terraces

*Contrasting features:* Silt loam throughout

*Distinctive present vegetation:* Black greasewood, shadscale, and bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Slightly concave, lower margins of lake plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Black greasewood, basin wildrye, rubber rabbitbrush, inland saltgrass

#### **Inclusion 3**

*Position on landscape:* Dry lake extensions and irregularly shaped sink areas

*Contrasting features:* Ponded

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Gund soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

*Suitability of the Umberland soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Gund Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—too clayey, excess salt, hard to pack

*Shallow excavations:* Moderate—too clayey, wetness

*Local roads and streets:* Severe—low strength, frost action, shrink-swell

*Roadfill:* Poor—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### Ratings of the Umberland Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—too clayey, hard to pack, excess sodium

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, frost action, shrink-swell

*Roadfill:* Poor—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Interpretive Groups

*Capability classification:* Gund soil—VIIw, nonirrigated; Umberland soil—VIIs, nonirrigated

*Range site:* Gund soil—024X006N; Umberland soil—024X003N

## 442—Gund-Bubus-Wendane association

### Map Unit Setting

*Position on landscape:* Basin floor

*Elevation:* 5,600 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Gund silt loam, strongly saline-sodic, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty over clayey, mixed, nonacid, mesic—35 percent

- Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—30 percent

- Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—20 percent

#### Contrasting inclusions:

- Inclusion 1: Aquic Torriorthents, 0 to 2 percent slopes—Aquic Torriorthents, fine-silty, mixed (calcareous), mesic—7 percent

- Inclusion 2: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent

- Inclusion 3: Aeric Halaquepts, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—4 percent

### Characteristics of the Gund Soil

*Position on landscape:* Lake plain terraces

*Parent material:* Silty mixed alluvium with a component of loess over lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### Typical Profile

0 to 4 inches—silt loam; platy structure; soft, very friable; strongly alkaline (pH 9.0); strongly saline (75 to 100 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

4 to 23 inches—silt loam; platy structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 50 to 80); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6

23 to 60 inches or more—silty clay, clay loam; prismatic structure; hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CH; estimated AASHTO classification—A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through January—60 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* Rare  
*Permeability:* Slow  
*Available water capacity:* 8.6 to 10.7 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Characteristics of the Bubus Soil**

*Position on landscape:* Alluvial flat remnants  
*Parent material:* Mixed alluvium high in pyroclastics  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.0 to 10.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats  
*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, basin wildrye, inland saltgrass

### **Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—30 to 48 inches; rest of year—below 48 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent channeled and smooth inset fans  
*Contrasting features:* Slightly salt and sodium affected  
*Distinctive present vegetation:* Basin big sagebrush, black greasewood

#### **Inclusion 2**

*Position on landscape:* Slightly convex remnant shorelines and offshore bars  
*Contrasting features:* Coarse textured, well drained soil that receives additional moisture from runoff

*Distinctive present vegetation:* Black greasewood, shadscale

### **Inclusion 3**

*Position on landscape:* Lower lake terraces subject to ponding

*Contrasting features:* Seasonal ponding

*Distinctive present vegetation:* Black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Gund soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings of the Gund Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—too clayey, excess salt, hard to pack

*Shallow excavations:* Moderate—too clayey, wetness

*Local roads and streets:* Severe—low strength, frost action, shrink-swell

*Roadfill:* Poor—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Ratings of the Bubus Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

### **Ratings of the Wendane Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Interpretive Groups**

*Capability classification:* Gund soil—VIIw, nonirrigated;

Bubus soil—IIs, irrigated, and VIIs, nonirrigated;

Wendane soil—VIIw, nonirrigated

*Range site:* Gund soil—024X008N; Bubus soil—024X003N; Wendane soil—024X007N

## **443—Gund-Batan association**

### **Map Unit Setting**

*Position on landscape:* Basin floor

*Elevation:* 5,600 to 5,700 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Gund silt loam, strongly saline-sodic, drained, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine silty over clayey, mixed, nonacid, mesic—65 percent
- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Aeris Halaquepts, 0 to 2 percent slopes—Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic—5 percent
- Inclusion 2: Aeris Halaquepts, 0 to 2 percent slopes—Aeris Halaquepts, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Aeris Halaquepts, 0 to 2 percent slopes—Aeris Halaquepts, fine, montmorillonitic (calcareous), mesic—2 percent

### **Characteristics of the Gund Soil**

*Position on landscape:* Lake plain terraces

*Parent material:* Silty mixed alluvium with a large component of loess over clayey lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, bottlebrush squirreltail, shadscale

### Typical Profile

0 to 4 inches—silt loam; platy structure; soft, very friable; strongly alkaline (pH 9.0); strongly saline (75 to 100 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

4 to 23 inches—silt loam; platy structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 50 to 80); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6

23 to 60 inches or more—silty clay, clay; prismatic structure; hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CH; estimated AASHTO classification—A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through June—60 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* Rare

*Permeability:* Slow

*Available water capacity:* 8.6 to 10.7 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Characteristics of the Batan Soil

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—alluvium influenced by loess and volcanic ash; source—volcanic rock high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood, bottlebrush squirreltail

### Typical Profile

0 to 5 inches—silt loam; platy structure; hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.1 to 12.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Lake plains

*Contrasting features:* Subject to ponding, poorly drained

*Distinctive present vegetation:* Black greasewood

#### Inclusion 2

*Position on landscape:* Channeled areas on alluvial flats

*Contrasting features:* Poorly drained

*Distinctive present vegetation:* Black greasewood, basin wildrye, rubber rabbitbrush

#### Inclusion 3

*Position on landscape:* Slightly concave areas on alluvial flats

*Contrasting features:* Year-round high water table at a depth of less than 10 inches

*Distinctive present vegetation:* Alkali bluegrass, alkali rabbitbrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Gund soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Gund Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—too clayey, excess salt, hard to pack

*Shallow excavations:* Moderate—too clayey, wetness  
*Local roads and streets:* Severe—low strength, frost action, shrink-swell  
*Roadfill:* Poor—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Batan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Severe—low strength  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Interpretive Groups**

*Capability classification:* Gund soil—VIIw, nonirrigated; Batan soil—IIIs, irrigated, and VIIs, nonirrigated  
*Range site:* Gund soil—024X008N; Batan soil—024X003N

### **461—Hapgood-Packer-Layview association**

#### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 8,000 to 9,800 feet  
*Average annual precipitation:* About 16 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 50 days

#### **Composition**

##### *Major components:*

- Hapgood very gravelly loam, 30 to 50 percent slopes—Pachic Cryoborolls, loamy-skeletal, mixed—40 percent
  - Packer extremely gravelly loam, 15 to 50 percent slopes—Argic Cryoborolls, loamy-skeletal, mixed—25 percent
  - Layview very gravelly sandy loam, 8 to 15 percent slopes—Argic Lithic Cryoborolls, loamy-skeletal, mixed—15 percent
- Contrasting inclusions:*
- Inclusion 1: Entic Cryumbrepts, 30 to 50 percent

slopes—Entic Cryumbrepts, loamy-skeletal, mixed—7 percent

- Inclusion 2: Rock outcrop—6 percent
- Inclusion 3: Argic Cryoborolls, 15 to 30 percent slopes—Argic Cryoborolls, loamy-skeletal, mixed—5 percent
- Inclusion 4: Rubble land—2 percent

#### **Characteristics of the Hapgood Soil**

*Position on landscape:* Side slopes of mountains  
*Parent material:* Kind—colluvium influenced by volcanic ash over residuum; source—tuff and quartzite  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Mountain big sagebrush, lupine, snowberry, Idaho fescue, Letterman needlegrass, mountain brome

#### **Typical Profile**

- 0 to 17 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2
- 17 to 40 inches—very gravelly loam; 5 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2
- 40 to 60 inches or more—very cobbly loam, very gravelly loam; 15 to 40 percent cobbles and stones and 40 to 50 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 4.8 to 6.0 inches  
*Water-supplying capacity:* 16 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—moderate  
*Potential frost action:* Moderate

### **Characteristics of the Packer Soil**

*Position on landscape:* Windswept shoulders and upper side slopes of mountains

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert, quartzite, and volcanic rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, bluebunch wheatgrass, Idaho fescue

### **Typical Profile**

0 to 10 inches—extremely gravelly loam; 15 to 25 percent cobbles and stones and 70 to 85 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; GP-GC; estimated AASHTO classification—A-2

10 to 21 inches—extremely cobbly clay loam, extremely cobbly loam; 40 to 55 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

21 to 60 inches or more—extremely cobbly loam, extremely cobbly sandy loam; 40 to 55 percent cobbles and stones and 55 to 70 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 3.6 to 5.4 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Layview Soil**

*Position on landscape:* Windswept crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—andesite and tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, low rabbitbrush, Idaho fescue

### **Typical Profile**

0 to 3 inches—very gravelly sandy loam; 10 to 15 percent cobbles and stones and 45 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

3 to 12 inches—very gravelly loam, very gravelly clay loam; 10 to 15 percent cobbles and stones and 45 to 70 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

12 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.9 to 1.1 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Sheltered concave snow pockets below shoulder slopes of mountains

*Contrasting features:* Slightly or medium acid throughout the profile

*Distinctive present vegetation:* Lupine, Letterman needlegrass

#### **Inclusion 2**

*Position on landscape:* Scattered peaks and rimrock on shoulder slopes of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### **Inclusion 3**

*Position on landscape:* Convex lower side slopes of mountains

*Contrasting features:* Horizon of clay accumulation, rock fragments are mostly pebbles

*Distinctive present vegetation:* Low sagebrush, Idaho fescue

### **Inclusion 4**

*Position on landscape:* Side slopes of mountains below rock outcrop

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### **Other inclusions of minor extent**

*Position on landscape:* Concave snow pockets

*Distinctive present vegetation:* Aspen, mountain brome

## **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Hapgood soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Packer soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Layview soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Hapgood Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, area reclaim

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

### **Ratings of the Packer Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, large stones

### **Ratings of the Layview Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—small stones, depth to bedrock

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, depth to bedrock

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

## **Interpretive Groups**

*Capability classification:* Hapgood soil—VIIIs, nonirrigated; Packer soil—VIIIs, nonirrigated; Layview soil—VIIIs, nonirrigated

*Range site:* Hapgood soil—024X032N; Packer soil—024X016N; Layview soil—024X016N

## **466—Hapgood-Tusel-Winada association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 7,200 to 8,000 feet

*Average annual precipitation:* About 16 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free season:* About 40 days

### **Composition**

*Major components:*

- Hapgood very gravelly loam, 30 to 50 percent slopes—Pachic Cryoborolls, loamy-skeletal, mixed—35 percent
- Tusel very gravelly loam, 30 to 50 percent slopes—Argic Pachic Cryoborolls, loamy-skeletal, mixed—30 percent
- Winada gravelly loam, 50 to 75 percent slopes—Argic Cryoborolls, loamy-skeletal, mixed—25 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—4 percent
- Inclusion 2: Argic Lithic Cryoborolls, 30 to 75 percent slopes—Argic Lithic Cryoborolls, loamy-skeletal, mixed—4 percent
- Inclusion 3: Pachic Cryoborolls, 30 to 50 percent slopes—Pachic Cryoborolls, coarse-loamy, mixed—2 percent

### **Characteristics of the Hapgood Soil**

*Position on landscape:* Side slopes of mountains

**Parent material:** Kind—very gravelly colluvium influenced by volcanic ash; source—tuffs  
**Slope features:** Length—short; shape—concave  
**Dominant present vegetation:** Mountain big sagebrush, snowberry, mountain brome, Sandberg bluegrass, bottlebrush squirreltail, arrowleaf balsamroot

### Typical Profile

- 0 to 17 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2
- 17 to 40 inches—very gravelly loam; 5 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2
- 40 to 60 inches or more—very cobbly loam, very gravelly loam; 15 to 40 percent cobbles and stones and 40 to 50 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

### Soil and Water Features

**Depth to seasonal high water table:** More than 60 inches  
**Frequency of flooding:** None  
**Permeability:** Moderate  
**Available water capacity:** 4.8 to 6.0 inches  
**Water-supplying capacity:** 11 inches  
**Runoff:** Rapid  
**Hydrologic group:** B  
**Erosion factors (surface layer):** K value—.10; T value—5; wind erodibility group—7  
**Hazard of erosion:** By water—moderate; by wind—slight  
**Shrink-swell potential:** Low  
**Corrosivity:** To steel—moderate; to concrete—low  
**Potential frost action:** Moderate

### Characteristics of the Tusel Soil

**Position on landscape:** North-facing side slopes of mountains  
**Parent material:** Kind—very gravelly colluvium and residuum; source—chert, quartzite, and shale  
**Slope features:** Length—short; shape—slightly concave  
**Dominant present vegetation:** Snowberry, mountain big sagebrush, Idaho fescue, lanceleaf rabbitbrush

### Typical Profile

- 0 to 20 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 60 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; slightly acid (pH 6.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2
- 20 to 42 inches—extremely gravelly sandy clay loam, very gravelly clay loam; 15 to 45 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2
- 42 inches—unweathered bedrock

### Soil and Water Features

**Depth to bedrock:** 40 to 60 inches  
**Depth to seasonal high water table:** More than 60 inches  
**Frequency of flooding:** None  
**Permeability:** Moderately slow  
**Available water capacity:** 4.4 to 5.4 inches  
**Water-supplying capacity:** 16 inches  
**Runoff:** Medium  
**Hydrologic group:** B  
**Erosion factors (surface layer):** K value—.15; T value—3; wind erodibility group—7  
**Hazard of erosion:** By water—severe; by wind—slight  
**Shrink-swell potential:** Moderate  
**Corrosivity:** To steel—moderate; to concrete—low  
**Potential frost action:** Moderate

### Characteristics of the Winada Soil

**Position on landscape:** Shoulders and upper side slopes of mountains  
**Parent material:** Kind—very gravelly residuum and colluvium; source—shale  
**Slope features:** Length—short; shape—convex  
**Dominant present vegetation:** Low sagebrush, Douglas rabbitbrush, bluebunch wheatgrass  
**Surface cover:** 30 percent pebbles

### Typical Profile

- 0 to 12 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM, GM-GC, SM-SC; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly clay loam; 0 to 5 percent

cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

24 to 36 inches—weathered bedrock

36 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.5 to 3.1 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Rimrock and scattered peaks

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Ridges and shoulder slopes of mountains

*Contrasting features:* Hard bedrock within a depth of 20 inches

*Distinctive present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass

#### **Inclusion 3**

*Position on landscape:* Concave snow pockets and back slopes of mountains

*Contrasting features:* Higher water-supplying capacity

*Distinctive present vegetation:* Mountain big sagebrush, snowberry, Sandberg bluegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Hapgood soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Tusel soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Winada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Hapgood Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

### **Ratings of the Tusel Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Winada Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slopes

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Hapgood soil—VIIIs, nonirrigated; Tusel soil—VIIIs, nonirrigated; Winada soil—VIIIs, nonirrigated

*Range site:* Hapgood soil—024X032N; Tusel soil—024X023N; Winada soil—024X027N

## **467—Hapgood-Sumine-Cleavage association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 7,000 to 8,600 feet

*Average annual precipitation:* About 15 inches

*Average annual air temperature:* About 42 degrees F  
*Frost-free season:* About 50 days

### **Composition**

#### *Major components:*

- Hapgood very gravelly loam, 30 to 50 percent slopes—Pachic Cryoborolls, loamy-skeletal, mixed—35 percent
- Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—30 percent
- Cleavage extremely gravelly loam, 30 to 75 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Argic Pachic Cryoborolls, 30 to 75 percent slopes—Argic Pachic Cryoborolls, loamy-skeletal, mixed—10 percent
- Inclusion 2: Rock outcrop—3 percent
- Inclusion 3: Pachic Cryoborolls, 15 to 30 percent slopes—Pachic Cryoborolls, fine-loamy, mixed—2 percent

### **Characteristics of the Hapgood Soil**

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum influenced by volcanic ash; source—extrusive volcanic rock

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Idaho fescue, mountain brome, slender wheatgrass, mountain big sagebrush

### **Typical Profile**

0 to 17 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

17 to 40 inches—very gravelly loam; 5 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

40 to 60 inches or more—very cobbly loam, very gravelly loam; 15 to 40 percent cobbles and stones and 40 to 50 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less

than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 4.8 to 6.0 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Sumine Soil**

*Position on landscape:* East-, west-, and south-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Bluebunch wheatgrass, basin wildrye, mountain big sagebrush

### **Typical Profile**

0 to 6 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

6 to 28 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.8 to 4.1 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crests of mountains  
*Parent material:* Kind—residuum; source—extrusive volcanic rock  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Idaho fescue, low sagebrush, black sagebrush

### **Typical Profile**

0 to 4 inches—extremely gravelly loam; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2  
 4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 0 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2  
 15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.6 to 1.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Very rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* North-facing ridges and shoulders of mountains  
*Contrasting features:* Thick, dark colored surface layer,

bedrock at a depth of 20 to 30 inches, lacks a layer of clay accumulation

*Distinctive present vegetation:* Black sagebrush, low sagebrush

#### **Inclusion 2**

*Position on landscape:* Scattered peaks and severely eroded side slopes of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Sheltered, north-facing snow pockets of mountains

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Aspen

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Hapgood soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Hapgood Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, area reclaim

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

#### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings and the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

**Interpretive Groups**

*Capability classification:* Hapgood soil—VIIIs, nonirrigated; Sumine soil—VIIIs, nonirrigated; Cleavage soil—VIIIs, nonirrigated

*Range site:* Hapgood soil—024X032N; Sumine soil—024X029N; Cleavage soil—024X016N

**482—Humdun-Havingdon-Bucan association****Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 100 days

**Composition**

*Major components:*

- Humdun silt loam, gravelly substratum, 30 to 50 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—35 percent

- Havingdon gravelly silt loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—25 percent

- Bucan cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 2 to 8 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed, nonacid, frigid—7 percent

- Inclusion 2: Humdun silt loam, 50 to 75 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—5 percent

- Inclusion 3: Rock outcrop—3 percent

**Characteristics of the Humdun Soil**

*Position on landscape:* North-facing side slopes of foothills

*Parent material:* Kind—loess influenced by volcanic ash capping colluvium; source—sedimentary tuffs

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

**Typical Profile**

0 to 6 inches—silt loam; platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 24 inches—loam, very fine sandy loam, silt loam; massive; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

24 to 41 inches—loam, very fine sandy loam, silt loam; massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

41 to 60 inches or more—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 10.3 to 12.1 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

**Characteristics of the Havingdon Soil**

*Position on landscape:* South-, east-, and west-facing, upper side slopes of foothills

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Bluebunch wheatgrass, Thurber needlegrass, big sagebrush

*Surface cover:* 30 percent pebbles, 10 percent stones

#### **Typical Profile**

0 to 3 inches—gravelly silt loam; 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-4

3 to 22 inches—very gravelly clay, very gravelly sandy clay, extremely gravelly clay loam; 65 to 85 percent pebbles (by weight); massive; very hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 26 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Bucan Soil**

*Position on landscape:* South-, east-, and west-facing, lower side slopes of foothills

*Parent material:* Kind—residuum capped with loess influenced by volcanic ash; source—volcanic rock

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

#### **Typical Profile**

0 to 5 inches—cobbly loam; 20 to 25 percent cobbles and stones and 20 to 30 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 15 inches—clay; 0 to 10 percent cobbles and

stones and 10 to 20 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-7

15 to 42 inches—cobbly clay, gravelly clay loam, gravelly clay; 10 to 30 percent cobbles and stones and 15 to 30 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-7

42 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 7.2 to 8.0 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—3; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Narrow canyon bottoms of foothills

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush

##### **Inclusion 2**

*Position on landscape:* North-facing concave pockets on foothills

*Contrasting features:* Receives additional moisture from drifting snow

*Distinctive present vegetation:* Idaho fescue

##### **Inclusion 3**

*Position on landscape:* Rimrock and scattered peaks of foothills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Humdun soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Havingdon soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bucan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Humdun Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope, area reclaim

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—seepage

**Ratings of the Havingdon Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Bucan Soil for Selected Uses**

*Range seeding:* Fair—droughty, erodes easily

*Daily cover for landfill:* Poor—large stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, area reclaim

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

**Interpretive Groups**

*Capability classification:* Humdun soil—VIIe, nonirrigated; Havingdon soil—VIIe, nonirrigated; Bucan soil—VIe, nonirrigated

*Range site:* Humdun soil—024X005N; Havingdon soil—024X035N; Bucan soil—024X005N

**486—Havingdon-Burrita association****Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,400 to 6,600 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 100 days

**Composition**

*Major components:*

- Havingdon gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—45 percent

- Burrita extremely cobbly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 30 to 50 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, frigid—5 percent

- Inclusion 2: Bojo extremely gravelly loam, 30 to 50 percent slopes—Lithic Haplargids, loamy, mixed, mesic—5 percent

- Inclusion 3: Xerollic Haplargids, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—5 percent

**Characteristics of the Havingdon Soil**

*Position on landscape:* Side slopes of foothills

*Parent material:* Kind—residuum and colluvium influenced by loess and volcanic ash; source—metavolcanic rocks

*Slope features:* Length—long; shape—concave to smooth

*Dominant present vegetation:* Bluebunch wheatgrass, Thurber needlegrass, big sagebrush

**Typical Profile**

0 to 3 inches—gravelly loam; 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4

3 to 22 inches—very gravelly clay, very gravelly sandy clay, extremely gravelly clay loam; 65 to 85 percent pebbles (by weight); massive; very hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 20 to 26 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.8 to 2.3 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Characteristics of the Burrita Soil**

*Position on landscape:* Shoulders and upper side slopes of foothills  
*Parent material:* Kind—residuum; source—metavolcanic rocks  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

**Typical Profile**

0 to 3 inches—extremely cobbly loam; 40 to 60 percent cobbles and stones and 45 to 70 percent pebbles (by weight); platy; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4  
 3 to 18 inches—very cobbly clay, very stony clay loam, very gravelly clay loam; 10 to 55 percent cobbles and stones and 45 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-7  
 18 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.5 to 2.0 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Drainageways of foothills  
*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

**Inclusion 2**

*Position on landscape:* Lower elevation, south-facing foot slopes of foothills  
*Contrasting features:* Soil is loamy, shallow to bedrock, and droughty

*Distinctive present vegetation:* Shadscale

**Inclusion 3**

*Position on landscape:* Higher elevation, south-facing sides slopes of foothills  
*Contrasting features:* Thick surface layer  
*Distinctive present vegetation:* Mountain big sagebrush, globemallow

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Havingdon soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Burrita soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Havingdon Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope, too clayey  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Burrita Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones  
*Daily cover for landfill:* Poor—depth to bedrock, slope, small stones  
*Shallow excavations:* Severe—depth to bedrock, large stones, slope  
*Local roads and streets:* Severe—depth to bedrock, slope, large stones

*Roadfill:* Poor—depth to bedrock, large stones, slope  
*Sand:* Improbable source—excess fines, large stones  
*Gravel:* Improbable source—excess fines, large stones  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Havingdon soil—VIIe, nonirrigated; Burrita soil—VIIs, nonirrigated  
*Range site:* Havingdon soil—024X035N; Burrita soil—024X005N

## **511—Hessing silt loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,800 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Hessing silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 2: Antel silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—4 percent
- Inclusion 3: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent
- Inclusion 4: Pumper silt loam, 0 to 2 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—2 percent

### **Characteristics of the Hessing Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Silty alluvium and loess influenced by volcanic ash over coarse mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, pepperweed

### **Typical Profile**

0 to 4 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

4 to 11 inches—silt loam, silty clay loam; prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 10); estimated Unified classification—CL; estimated AASHTO classification—A-6

11 to 18 inches—very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 9.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 10); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

18 to 30 inches—gravelly loam; 35 to 45 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-4

30 to 60 inches or more—stratified very gravelly loamy coarse sand to extremely gravelly sand; 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); strongly saline (16 to 25 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—GP-GM, GW-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 30 inches—moderate; below this depth—very rapid

*Available water capacity:* 6.0 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—3; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth lower margins of fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth alluvial flat remnants at lower margins of fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Indian ricegrass, shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Alluvial flat remnants adjacent to old channels

*Contrasting features:* Silty and calcareous throughout the profile

*Distinctive present vegetation:* Black greasewood, bud sagebrush, shadscale

**Inclusion 4**

*Position on landscape:* Concave areas adjacent to channels

*Contrasting features:* Very gravelly throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily, too sandy

**Interpretive Groups**

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

**512—Hessing-Relley association****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,800 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition****Major components:**

- Hessing gravelly silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—55 percent

- Relley silt loam, 0 to 2 percent slopes, frequently flooded—Duric Camborthids, fine-silty, mixed, mesic—30 percent

**Contrasting inclusions:**

- Inclusion 1: Pumper gravelly very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—5 percent

- Inclusion 2: Creemon very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

- Inclusion 3: Antel sandy clay loam, 0 to 2 percent slopes, occasionally flooded—Duric Camborthids, fine-silty, mixed, mesic—5 percent

**Characteristics of the Hessing Soil**

*Position on landscape:* Broad, upper fan skirts

*Parent material:* Loess and silty alluvium over coarse mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Typical Profile**

0 to 4 inches—gravelly silt loam; 25 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

4 to 11 inches—silt loam, silty clay loam; prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL; estimated AASHTO classification—A-6

11 to 18 inches—very fine sandy loam, silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 9.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

18 to 30 inches—gravelly loam; 35 to 45 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—GM; estimated AASHTO classification—A-4

30 to 60 inches or more—stratified very gravelly loamy coarse sand to extremely gravelly sand; 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GW-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 30 inches—moderate; below this depth—very rapid  
*Available water capacity:* 6.0 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—3; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Relley Soil

*Position on landscape:* Broad, lower fan skirts  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Saltbush, bottlebrush squirreltail, Indian ricegrass

### Typical Profile

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4  
 28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to

16 mmhos/cm); slightly to moderately sodic (SAR 20 to 30); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—frequent; duration—very brief; months—December through June  
*Permeability:* Moderate  
*Available water capacity:* 10.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Stream terraces adjacent to fan skirts

*Contrasting features:* Very gravelly and sandy throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Lower margins of fan skirts and inset fans

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Irregularly shaped, active flood plains adjacent to fan skirts

*Contrasting features:* Receives additional moisture during spring runoff

*Distinctive present vegetation:* Basin wildrye, basin big sagebrush, black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Hessian soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Relley soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Hessing Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Poor—seepage, small stones  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage, excess salt

**Ratings of the Relley Soil for Selected Uses**

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Moderate—flooding  
*Local roads and streets:* Severe—flooding  
*Roadfill:* Fair—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt

**Interpretive Groups**

*Capability classification:* Hessing soil—IIs, irrigated, and VIIs, nonirrigated; Relley soil—IIIw, irrigated, and VIIw, nonirrigated  
*Range site:* Hessing soil—024X002N; Relley soil—024X012N

**530—Humboldt fine sandy loam****Map Unit Setting**

*Position on landscape:* Flood plains  
*Elevation:* 4,450 to 4,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Humboldt fine sandy loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—85 percent
- Contrasting inclusions:*
  - Inclusion 1: Parana silt loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—5 percent
  - Inclusion 2: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—5 percent

- Inclusion 3: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

**Characteristics of the Humboldt Soil**

*Position on landscape:* Flood plains  
*Parent material:* Silty mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Basin wildrye, Nevada bluegrass

**Typical Profile**

0 to 11 inches—fine sandy loam; prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-4  
 11 to 60 inches or more—stratified silty clay loam to clay; 0 to 10 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—MH; estimated AASHTO classification—A-7

**Soil and Water Features**

*Depth to seasonal high water table:* December through July—6 to 24 inches; rest of year—below 24 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—December through June  
*Permeability:* Moderately slow  
*Available water capacity:* 9.8 to 11.1 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Higher areas of flood plains  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Basin wildrye, creeping wildrye

**Inclusion 2**

*Position on landscape:* Areas adjacent to stream channels  
*Contrasting features:* Stratified sand to silt loam throughout the profile

*Distinctive present vegetation:* Basin wildrye, willow, rose

### **Inclusion 3**

*Position on landscape:* Side channels and backwater areas along the outer margins of the delineations

*Contrasting features:* Less organic matter in the surface layer

*Distinctive present vegetation:* Creeping wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### **Ratings and Restrictive Features of the Soil for Selected Uses and Practices**

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Poor—too clayey, wetness, hard to pack

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—flooding, low strength, wetness

*Roadfill:* Poor—low strength, wetness

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—wetness, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—hard to pack, wetness

*Drainage:* Flooding, frost action, poor outlets

*Irrigation:* Wetness

*Terraces and diversions:* Poor outlets, wetness

### **Interpretive Groups**

*Capability classification:* Vw, irrigated, and Vw, nonirrigated

*Range site:* 025X001N

## **531—Humboldt silty clay**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,450 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Humboldt silty clay, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Parana silt loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Humboldt Soil**

*Position on landscape:* Flood plains

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Basin wildrye, Nevada bluegrass

### **Typical Profile**

0 to 11 inches—silty clay; prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—MH; estimated AASHTO classification—A-7

11 to 60 inches or more—stratified silty clay loam to clay; 0 to 10 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—MH; estimated AASHTO classification—A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* December through July—6 to 24 inches; rest of year—below 24 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through June

*Permeability:* Moderately slow

*Available water capacity:* 10.0 to 11.3 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Higher areas on flood plains

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Creeping wildrye, sedge, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Areas adjacent to stream channels

*Contrasting features:* Stratified sand to silt loam throughout the profile

*Distinctive present vegetation:* Basin wildrye, rose

#### **Inclusion 3**

*Position on landscape:* Side channels and backwater areas along the outer margins of the delineations

*Contrasting features:* Less organic matter in the surface layer

*Distinctive present vegetation:* Creeping wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—very poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—excess salt, too clayey

*Daily cover for landfill:* Poor—too clayey, wetness, hard to pack

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—flooding, low strength, wetness

*Roadfill:* Poor—low strength, wetness

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—wetness, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—hard to pack, wetness

*Drainage:* Flooding, percs slowly, poor outlets

*Irrigation:* Wetness

*Terraces and diversions:* Poor outlets, wetness

### **Interpretive Groups**

*Capability classification:* Vw, irrigated, and Vw, nonirrigated

*Range site:* 025X001N

## **532—Humboldt silty clay loam, slightly saline**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,450 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Humboldt silty clay loam, slightly saline, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Parana silt loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—3 percent
- Inclusion 3: Sonoma silt loam, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—2 percent

### **Characteristics of the Humboldt Soil**

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Silver sagebrush, basin wildrye, creeping wildrye, inland saltgrass, alkali sacaton

### **Typical Profile**

0 to 11 inches—silty clay loam; prismatic structure; hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—CL; estimated AASHTO classification—A-7

11 to 60 inches or more—stratified silty clay loam to clay; 0 to 10 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.9); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—MH; estimated AASHTO classification—A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* December through June—6 to 24 inches; rest of year—below 24 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Moderately slow  
*Available water capacity:* 10.0 to 11.3 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Very slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Higher areas on flood plains  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Creeping wildrye, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Fan skirts from adjacent fan piedmonts overlaping the flood plains  
*Contrasting features:* Sandy throughout the profile, somewhat excessively drained  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Side channels and backwater areas along the outer margins of the delineations  
*Contrasting features:* Less organic matter in the surface layer  
*Distinctive present vegetation:* Alkali cordgrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—good; shallow water areas—good

### **Ratings and Restrictive Features of the Soil for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, too clayey  
*Daily cover for landfill:* Poor—too clayey, wetness, hard to pack  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—flooding, low strength, wetness  
*Roadfill:* Poor—low strength, wetness  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—wetness, excess salt, too clayey

*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—hard to pack, wetness, excess salt  
*Drainage:* Flooding, frost action  
*Irrigation:* Wetness, erodes easily  
*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* Vw, irrigated, and Vw, nonirrigated  
*Range site:* 025X001N

## **571—Jenor-Blacka very fine sandy loams**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts  
*Elevation:* 4,500 to 4,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Jenor very fine sandy loam, 0 to 2 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—45 percent
- Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—40 percent

#### *Contrasting inclusions:*

- Inclusion 1: Jenor very fine sandy loam, 2 to 4 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—8 percent
- Inclusion 2: Blacka very fine sandy loam, 2 to 4 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—7 percent

### **Characteristics of the Jenor Soil**

*Position on landscape:* Upper part of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4  
 6 to 16 inches—fine sandy loam, loam; 0 to 5 percent cobbles and stones and 5 to 25 percent pebbles (by weight); massive; soft, friable; strongly alkaline (pH

8.5); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-4  
 16 to 26 inches—fine sandy loam, sandy loam, gravelly loam; 0 to 5 percent cobbles and stones and 10 to 40 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4, A-2  
 26 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

#### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.0 to 3.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—2; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

#### **Characteristics of the Blacka Soil**

*Position on landscape:* Lower part of fan piedmont remnants  
*Parent material:* Loess over mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

#### **Typical Profile**

0 to 8 inches—very fine sandy loam; prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 2 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 8 to 21 inches—fine sandy loam, very fine sandy loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 21 to 31 inches—strongly cemented duripan; massive; very hard, very firm  
 31 to 64 inches or more—stratified sandy loam to loam; massive; slightly hard, very friable; strongly alkaline

(pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to hardpan:* 20 to 26 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 2.9 to 3.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Shoulder slopes of upper fan piedmont remnants  
*Contrasting features:* Slopes of 2 to 4 percent  
*Distinctive present vegetation:* Shadscale, bud sagebrush

##### **Inclusion 2**

*Position on landscape:* Shoulder slopes of lower fan piedmont remnants  
*Contrasting features:* Slopes of 2 to 4 percent  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, recreation

#### **Wildlife habitat elements:**

*Suitability of the Jenor soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetlands plants—poor; shallow water areas—very poor

*Suitability of the Blacka soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features of the Jenor Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Poor—cemented pan  
*Shallow excavations:* Severe—cemented pan  
*Local roads and streets:* Moderate—cemented pan  
*Roadfill:* Poor—cemented pan  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Soil blowing, cemented pan  
*Terraces and diversions:* Cemented pan

### **Ratings and Restrictive Features of the Blacka Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Poor—cemented pan  
*Shallow excavations:* Moderate—cemented pan  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—cemented pan, thin layer  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Cemented pan, erodes easily  
*Terraces and diversions:* Cemented pan, erodes easily

### **Interpretive Groups**

*Capability classification:* Jenor soil—IVs, irrigated, and VIIs, nonirrigated; Blacka soil—IVs, irrigated, and VIIs, nonirrigated  
*Range site:* Jenor soil—024X002N; Blacka soil—024X002N

## **573—Jenor-Beoska-Broyles association**

### **Map Unit Setting**

*Position on landscape:* Piedmont slopes  
*Elevation:* 4,600 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*  
 • Jenor very fine sandy loam, 2 to 8 percent slopes—Typic Durorthids, coarse-loamy, mixed, mesic—40 percent

• Beoska very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—25 percent  
 • Broyles very fine sandy loam, 2 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—20 percent

### *Contrasting inclusions:*

• Inclusion 1: Orovada sandy loam, eroded, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—8 percent  
 • Inclusion 2: Tenabo very fine sandy loam, 2 to 4 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—4 percent  
 • Inclusion 3: Durorthidic Xeric Torriorthents, 0 to 2 percent slopes—Durorthidic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—3 percent

### **Characteristics of the Jenor Soil**

*Position on landscape:* Higher summits and shoulder slopes of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—very fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4  
 6 to 16 inches—fine sandy loam, loam; 0 to 5 percent cobbles and stones and 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-4  
 16 to 26 inches—fine sandy loam, sandy loam, gravelly loam; 0 to 5 percent cobbles and stones and 10 to 40 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4, A-2  
 26 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.0 to 3.7 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—2; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits and shoulder slopes of fan piedmont remnants  
*Parent material:* Loess capped mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, small rabbitbrush

### **Typical Profile**

0 to 13 inches—very fine sandy loam; 5 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4  
 13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2  
 55 to 60 inches or more—stratified gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 7.9 to 9.8 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Lower inset fans and fan skirts  
*Parent material:* Loess capped mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, small rabbitbrush

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.3 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Irregularly shaped inset fans on upper part of map unit  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

**Inclusion 2**

*Position on landscape:* Convex, dissected, highest summits of fan piedmont remnants

*Contrasting features:* Indurated duripan within a depth of 20 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Areas adjacent to concave, active channels

*Contrasting features:* Droughty soil subject to occasional flash flooding

*Distinctive present vegetation:* Basin big sagebrush, Wyoming big sagebrush, basin wildrye

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Jenor soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

**Ratings of the Jenor Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

**Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

**Ratings of the Broyles Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

**Interpretive Groups**

*Capability classification:* Jenor soil—IVe, irrigated, and VIIs, nonirrigated; Beoska soil—IIIe, irrigated, and VIIs, nonirrigated; Broyles soil—IIIe, irrigated, and VIIc, nonirrigated

*Range site:* Jenor soil—024X002N; Beoska soil—024X002N; Broyles soil—024X002N

**590—Landco silt loam****Map Unit Setting**

*Position on landscape:* Alluvial flat remnants

*Elevation:* 4,400 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed, (calcareous), mesic—5 percent

- Inclusion 2: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

- Inclusion 3: Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

**Characteristics of the Landco Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, Nuttall saltbush, seepweed

### Typical Profile

- 0 to 18 inches—silt loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 18 to 44 inches—silty clay, silty clay loam; prismatic structure; very hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CH, CL; estimated AASHTO classification—A-7
- 44 to 69 inches or more—silt loam; massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.64; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial flat remnants near adjacent alluvial flats  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Higher areas on alluvial flat remnants near adjacent skirts  
*Contrasting features:* Sandy loam throughout the profile  
*Distinctive present vegetation:* Shadscale, black greasewood

#### Inclusion 3

*Position on landscape:* Outer margins of alluvial flat remnants  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Nuttall saltbush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—hard to pack

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Deep to water

*Irrigation:* Excess salt, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, percs slowly

### Interpretive Groups

*Capability classification:* IVs, irrigated, and VIIs, nonirrigated

*Range site:* 024X012N

## 602—Misad gravelly sandy loam, strongly saline-sodic

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Misad gravelly sandy loam, strongly saline-sodic, 0 to 2 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

**Characteristics of the Misad Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, black greasewood

**Typical Profile**

- 0 to 7 inches—gravelly sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-1, A-2
- 7 to 31 inches—stratified fine sandy loam to very gravelly sandy loam; 5 to 10 percent cobbles and stones and 40 to 60 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-1, A-2
- 31 to 60 inches or more—stratified very gravelly loamy sand to extremely gravelly coarse sand; 5 to 10 percent cobbles and stones and 60 to 80 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.9 to 4.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Adjacent alluvial flat remnants

*Contrasting features:* Silty throughout the profile, moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

**Inclusion 2**

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, black greasewood

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops

(irrigated)—poor; domestic grasses and legumes

(irrigated)—poor; wild herbaceous plants

(nonirrigated)—very poor; shrubs (nonirrigated)—

very poor; wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess salt

*Drainage:* Deep to water

*Irrigation:* Droughty

*Terraces and diversions:* Too sandy

**Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

**605—Misad-Creemon-Rednik association****Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Misad gravelly loam, 4 to 8 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—35 percent
  - Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—30 percent
  - Rednik silt loam, 4 to 8 percent slopes—Typic Haplargids, loamy-skeletal, mixed, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Xerollic Haplargids, 4 to 8 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—10 percent
  - Inclusion 2: Whirlo very gravelly loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—5 percent

**Characteristics of the Misad Soil**

*Position on landscape:* Fan aprons overlaping fan piedmonts

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, cheatgrass

**Typical Profile**

- 0 to 7 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SM-SC, GM, GM-GC; estimated AASHTO classification—A-2, A-4
- 7 to 31 inches—stratified fine sandy loam to very gravelly sandy loam; 5 to 10 percent cobbles and stones and 40 to 60 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-1, A-2
- 31 to 60 inches or more—very gravelly loamy sand to extremely gravelly coarse sandy loam; 5 to 10 percent cobbles and stones and 60 to 80 percent pebbles (by weight); single grained; loose; strongly

alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.9 to 4.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Characteristics of the Creemon Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Typical Profile**

- 0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—very fine sandy loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.7 to 11.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Characteristics of the Rednik Soil

*Position on landscape:* Nonburied fan piedmont remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

### Typical Profile

0 to 6 inches—silt loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 6 to 17 inches—very gravelly sandy loam, extremely gravelly loam, very gravelly sandy clay loam; 5 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; hard, friable; strongly alkaline (pH 8.9); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2  
 17 to 60 inches or more—very gravelly sandy loam, very gravelly sand, extremely gravelly loamy sand; 5 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 9.0); nonsaline to slightly saline (2 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 17 inches—moderately slow; below this depth—very rapid  
*Available water capacity:* 2.6 to 4.1 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Higher, nonburied fan piedmont remnants and fan drainageways

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Upper margins of fan skirts

*Contrasting features:* Very gravelly fine sandy loam substratum, noncalcareous surface and subsoil layers

*Distinctive present vegetation:* Shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Misad soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Creemon soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Rednik soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Misad Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### Ratings of the Creemon Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

#### **Ratings of the Rednik Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—large stones

*Roadfill:* Fair—large stones

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Misad soil—IIIs, irrigated, and VIIs, nonirrigated; Creemon soil—IIc, irrigated, and VIIC, nonirrigated; Rednik soil—VIIs, nonirrigated

*Range site:* Misad soil—024X002N; Creemon soil—024X002N; Rednik soil—024X002N

### **631—McConnel-Tulase association**

#### **Map Unit Setting**

*Position on landscape:* Beach plains

*Elevation:* 5,500 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

#### **Composition**

*Major components:*

- McConnel loam, 0 to 4 percent slopes—Xerollic Camborthids, sandy-skeletal, mixed, mesic—60 percent
- Tulase silt loam, 0 to 2 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—30 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Xeric Torriorthents, 0 to 2 percent slopes—Durorthidic Xeric Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent
- Inclusion 2: Durixerollic Camborthids, 0 to 4 percent slopes—Durixerollic Camborthids, coarse-silty, mixed, mesic—3 percent
- Inclusion 3: Bubus very fine sandy loam, 0 to 4

percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent

#### **Characteristics of the McConnel Soil**

*Position on landscape:* Offshore bars

*Parent material:* Mixed alluvium influenced by loess and volcanic ash over beach deposits

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, pine bluegrass, Sandberg bluegrass, bottlebrush squirreltail

#### **Typical Profile**

0 to 2 inches—loam; 5 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

2 to 12 inches—loam, sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

12 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 0 to 15 percent cobbles and stones and 65 to 90 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 12 inches—moderately rapid; below this depth—very rapid

*Available water capacity:* 3.1 to 4.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

#### **Characteristics of the Tulase Soil**

*Position on landscape:* Lagoons

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—slightly concave to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, pine bluegrass, bottlebrush squirreltail, Indian ricegrass

### Typical Profile

0 to 6 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

6 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.1 to 12.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth to slightly concave inset fans dissecting beach plains

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, basin wildrye

#### Inclusion 2

*Position on landscape:* Smooth to slightly convex fan skirts at upper margin of beach plains

*Contrasting features:* Noncalcareous in the upper 20 inches

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### Inclusion 3

*Position on landscape:* Adjacent smooth to slightly convex alluvial flat remnants

*Contrasting features:* Loamy throughout the profile  
*Distinctive present vegetation:* Black greasewood, shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the McConnel soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Tulase soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the McConnel Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—too sandy, small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### Ratings of the Tulase Soil for Selected Uses

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

### Interpretive Groups

*Capability classification:* McConnel soil—IVe, irrigated, and VIIs, nonirrigated; Tulase soil—IIe, irrigated, and VIc, nonirrigated

*Range site:* McConnel soil—024X005N; Tulase soil—024X005N

## 660—Needle Peak silt loam, occasionally flooded

### Map Unit Setting

*Position on landscape:* Flood plains

*Elevation:* 4,700 to 4,800 feet

*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Needle Peak silt loam, 0 to 2 percent slopes, occasionally flooded—Aquic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, fine-loamy, mixed (calcareous), mesic—7 percent
- Inclusion 2: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 3: Broyles silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—3 percent

### **Characteristics of the Needle Peak Soil**

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—smooth to slightly concave

*Dominant present vegetation:* Basin big sagebrush, rubber rabbitbrush, basin wildrye, bottlebrush squirreltail, inland saltgrass

### **Typical Profile**

0 to 4 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

4 to 60 inches or more—silt loam, silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* January through May—48 to 72 inches; rest of year—below 72 inches

*Flooding:* Frequency—occasional; duration—brief; months—March through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 13.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Stream terraces

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Outer margin of flood plains adjacent to fan skirts

*Contrasting features:* Strongly salt and sodium affected throughout the profile

*Distinctive present vegetation:* Shadscale

#### **Inclusion 3**

*Position on landscape:* Fan skirts adjacent to flood plains

*Contrasting features:* Nonflooded, well drained, and slightly salt and sodium affected

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—fair; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Fair—too clayey

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Moderate—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, flooding

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* Ilw, irrigated, and Vlw, nonirrigated

*Range site:* 024X006N

## **670—Filiran-Pineval-Kingingham association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,600 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Filiran silt loam, 2 to 4 percent slopes—Haploxerollic Nadurargids, fine, montmorillonitic, mesic—40 percent
- Pineval gravelly fine sandy loam, 4 to 8 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—30 percent

- Kingingham gravelly very fine sandy loam, 2 to 4 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Haplargids, 4 to 15 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—8 percent
- Inclusion 2: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—7 percent

### **Characteristics of the Filiran Soil**

*Position on landscape:* Summits of upper fan piedmont remnants

*Parent material:* Kind—alluvium influenced by loess; source—metavolcanic rocks

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, Sandberg bluegrass, small rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—silt loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

7 to 12 inches—gravelly silt loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2

mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC, GC, SC, SM-SC; estimated AASHTO classification—A-4, A-6  
12 to 33 inches—clay, silty clay loam, gravelly clay; 10 to 30 percent pebbles (by weight); prismatic structure; very hard, very firm; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7  
33 to 60 inches or more—strongly cemented duripan

### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.7 to 4.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.49; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Pineval Soil**

*Position on landscape:* Fan aprons

*Parent material:* Gravelly mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, Sandberg bluegrass

### **Typical Profile**

0 to 5 inches—gravelly fine sandy loam; 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2

5 to 11 inches—very gravelly loam, very gravelly clay loam; 50 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GC; estimated AASHTO classification—A-2

11 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly sand; 0 to 25 percent cobbles and stones and 50 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/

cm); nonsodic (SAR less than 4); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.0 to 4.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Kingingham Soil

*Position on landscape:* Summits of lower fan piedmont remnants  
*Parent material:* Mixed alluvium with a thin loess mantle  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4  
 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 40 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 13 to 30); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7  
 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### Soil and Water Features

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 3.5 to 4.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Side slopes of fan piedmont remnants

*Contrasting features:* Clay loam subsoil

*Distinctive present vegetation:* Wyoming big sagebrush, Sandberg bluegrass

#### Inclusion 2

*Position on landscape:* Broad inset fans

*Contrasting features:* Loamy throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Filiran soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Pineval soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Kingingham soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

### Ratings of the Filiran Soil for Selected Uses

*Range seeding:* Poor—excess sodium

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—low strength, shrink-swell, cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, too clayey

*Pond reservoir areas:* Moderate—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

### Ratings of the Pineval Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—area reclaim, small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess salt

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, too clayey

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

#### **Interpretive Groups**

*Capability classification:* Filiran soil—VIIIs, nonirrigated;

Pineval soil—IVe, irrigated, and VIs, nonirrigated;

Kingingham soil—VIIIs, nonirrigated

*Range site:* Filiran soil—028B010N; Pineval soil—028B010N; Kingingham soil—024X002N

### **680—Skullwak-Umberland-Wendane association**

#### **Map Unit Setting**

*Position on landscape:* Basin floor

*Elevation:* 5,600 to 5,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Skullwak silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic—35 percent
  - Umberland silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic—35 percent
  - Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—15 percent
- Contrasting inclusions:*
- Inclusion 1: Playas—7 percent

- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Dune land, clayey—3 percent

#### **Characteristics of the Skullwak Soil**

*Position on landscape:* Lake plains

*Parent material:* Fine textured mixed lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Inland saltgrass, alkali bluegrass, alkali rabbitbrush

#### **Typical Profile**

0 to 10 inches—silt loam; platy structure; hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

10 to 60 inches or more—stratified silty clay loam to silt loam; massive; very hard, very firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

#### **Soil and Water Features**

*Depth to seasonal high water table:* January through December—18 to 36 inches

*Flooding:* Frequency—frequent; duration—brief; months—December through June

*Permeability:* Very slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Moderate

#### **Characteristics of the Umberland Soil**

*Position on landscape:* Lake plains with coppice dunes adjacent to playas

*Parent material:* Mixed lacustrine sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, inland saltgrass

#### **Typical Profile**

0 to 4 inches—silt loam; platy structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (40 to 60

mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

4 to 60 inches—silty clay, silty clay loam; massive; slightly hard, friable; strongly alkaline (pH 9.2); strongly saline (20 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

### Soil and Water Features

*Depth to seasonal high water table:* December through June—30 to 60 inches; rest of year—below 60 inches

*Flooding:* Frequency—occasional; duration—long; months—December through June

*Permeability:* Very slow

*Available water capacity:* 9.0 to 12.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Characteristics of the Wendane Soil

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, basin wildrye, inland saltgrass

### Typical Profile

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through May—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Irregularly shaped sink areas and extensions of main playas

*Contrasting features:* Ponded

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Remnants of lake plains

*Contrasting features:* Moderately well drained due to channeling

*Distinctive present vegetation:* Black greasewood, shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Convex parna dunes adjacent to playas

*Contrasting features:* Dune topography, excessively drained, and nonflooded

*Distinctive present vegetation:* Barren except for some scattered black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Skullwak soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

*Suitability of the Umberland soil for named elements:*

Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

**Ratings of the Skullwak Soil for Selected Uses***Range seeding:* Poor—excess salt, excess sodium*Daily cover for landfill:* Poor—too clayey, hard to pack*Shallow excavations:* Severe—wetness*Local roads and streets:* Severe—low strength, flooding, shrink-swell*Roadfill:* Poor—low strength, shrink-swell*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—excess salt, excess sodium, too clayey*Pond reservoir areas:* Slight*Embankments, dikes, and levees:* Severe—wetness, excess salt, excess sodium**Ratings of the Umlerland Soil for Selected Uses***Range seeding:* Poor—excess salt, excess sodium*Daily cover for landfill:* Poor—too clayey, hard to pack, excess sodium*Shallow excavations:* Moderate—too clayey, flooding, wetness*Local roads and streets:* Severe—low strength, shrink-swell, flooding*Roadfill:* Poor—low strength, shrink-swell*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—excess salt, excess sodium, too clayey*Pond reservoir areas:* Slight*Embankments, dikes, and levees:* Severe—excess salt, excess sodium**Ratings of the Wendane Soil for Selected Uses***Range seeding:* Poor—excess salt, excess sodium*Daily cover for landfill:* Poor—excess salt, excess sodium*Shallow excavations:* Moderate—flooding, wetness*Local roads and streets:* Severe—flooding, frost action*Roadfill:* Poor—low strength*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—excess salt, excess sodium*Pond reservoir areas:* Moderate—seepage*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium**Interpretive Groups***Capability classification:* Skullwak soil—VIIw, nonirrigated; Umlerland soil—VIIw, nonirrigated; Wendane soil—VIIw, nonirrigated*Range site:* Skullwak soil—024X044N; Umlerland soil—024X011N; Wendane soil—024X007N**684—Ocala silt loam, occasionally flooded****Map Unit Setting***Position on landscape:* Lake plains*Elevation:* 5,000 to 5,300 feet*Average annual precipitation:* About 8 inches*Average annual air temperature:* About 50 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

- Ocala silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, fine-silty, mixed, mesic—3 percent

- Inclusion 3: Aeric Halaquepts, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—2 percent

**Characteristics of the Ocala Soil***Position on landscape:* Lake plains*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash*Slope features:* Length—long; shape—slightly concave*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, basin wildrye**Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-4, A-6

13 to 60 inches or more—silt loam, silty clay loam; massive; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

**Soil and Water Features***Depth to seasonal high water table:* February through May—42 to 60 inches; rest of year—below 60 inches*Flooding:* Frequency—occasional; duration—brief or long; months—March through May*Permeability:* Slow*Available water capacity:* 11.4 to 12.6 inches*Water-supplying capacity:* 8 inches*Runoff:* Very slow*Hydrologic group:* C*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave margins of alluvial flat remnants adjacent to lake plains

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 2**

*Position on landscape:* Fan skirts adjacent to lake plains

*Contrasting features:* Well drained

*Distinctive present vegetation:* Basin big sagebrush, black greasewood, basin wildrye

#### **Inclusion 3**

*Position on landscape:* Lower areas of lake plains

*Contrasting features:* Ponded for brief periods

*Distinctive present vegetation:* Black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

#### **Ratings for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Interpretive Groups**

*Capability classification:* VIIw, nonirrigated

*Range site:* 024X007N

## **700—Orovada fine sandy loam, 0 to 2 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,200 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Orovada fine sandy loam, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent
- Inclusion 3: Davey fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—4 percent
- Inclusion 4: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—3 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Lower water-supplying capacity  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent inset fans  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Sand sheets overlaping fan skirts  
*Contrasting features:* Sandy at a depth of more than 20 inches  
*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 4**

*Position on landscape:* Sand dunes on fan skirts  
*Contrasting features:* Sandy throughout the profile  
*Distinctive present vegetation:* Indian ricegrass, Wyoming big sagebrush

#### **Other inclusions of minor extent**

*Position on landscape:* Adjacent fan piedmont remnants  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Shadscale and bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—too arid  
*Daily cover for landfill:* Good

*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—frost action  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—small stones, thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Soil blowing, erodes easily  
*Terraces and diversions:* Erodes easily, soil blowing

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIc, nonirrigated  
*Range site:* 024X020N

## **701—Orovada fine sandy loam, 2 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,800 to 5,200 feet  
*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Orovada fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Davey fine sandy loam, 2 to 4 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—5 percent
- Inclusion 2: Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 3: Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Slightly dissected fan skirts  
*Parent material:* Loess high in volcanic ash over mixed alluvium  
*Slope features:* Length—long; shape—slightly convex  
*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass, bottlebrush squirreltail, spiny hopsage

#### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles

(by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 65 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly convex to slightly concave, slightly dissected sand sheets overlaping fan skirts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Indian ricegrass, Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Smooth, slightly dissected inset fans dissecting fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Higher dissected fan skirts

*Contrasting features:* Slightly sodium affected

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Soil blowing, slope, erodes easily

*Terraces and diversions:* Erodes easily, soil blowing

### Interpretive Groups

*Capability classification:* IIe, irrigated, and VIc, nonirrigated

*Range site:* 024X020N

### 702—Orovada fine sandy loam, cemented substratum, 0 to 2 percent slopes

#### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 4,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### Composition

*Major components:*

- Orovada fine sandy loam, cemented substratum, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—4 percent
- Inclusion 2: Broyles very fine sandy loam, 0 to 2

percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—4 percent

- Inclusion 3: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent

- Inclusion 4: Davey fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—3 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Douglas rabbitbrush, globemallow

### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 20 percent pebbles (by weight); subangular blocky structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 45 inches or more—stratified fine sandy loam to silt loam; 5 to 20 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

45 to 60 inches or more—strongly cemented duripan

### **Soil and Water Features**

*Depth to hardpan:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—3; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Shadscale

#### **Inclusion 2**

*Position on landscape:* Lower areas on fan skirts

*Contrasting features:* Lacks cemented substratum

*Distinctive present vegetation:* Shadscale

#### **Inclusion 3**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale

#### **Inclusion 4**

*Position on landscape:* Sand sheets overlaping fan skirts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass

#### **Other inclusions of minor extent**

*Position on landscape:* Adjacent fan piedmont remnants

*Contrasting features:* Indurated duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Shadscale and bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Fair—cemented pan, thin layer

*Shallow excavations:* Moderate—cemented pan

*Local roads and streets:* Moderate—frost action

*Roadfill:* Fair—thin layer, cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Soil blowing, erodes easily

*Terraces and diversions:* Erodes easily, soil blowing

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIc, nonirrigated

*Range site:* 024X020N

## **703—Orovada-Goldrun complex**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 5,300 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Orovada fine sandy loam, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—45 percent

- Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—45 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 2: Davey very fine sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—5 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Thurber needlegrass, spiny hopsage, Wyoming big sagebrush

### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to

silt loam; 5 to 25 percent pebbles (by weight);

massive; soft, very friable; strongly alkaline (pH

8.6); slightly saline (4 to 8 mmhos/cm); nonsodic

(SAR less than 5); estimated Unified classification—

SM, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Goldrun Soil**

*Position on landscape:* Sand sheets on fan skirts

*Parent material:* Mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Indian ricegrass, needleandthread, basin big sagebrush

### **Typical Profile**

0 to 7 inches—fine sand; massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2

7 to 60 inches or more—fine sand; massive; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.2 to 5.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—slight; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Moderately saline profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Lower margins of sand sheets  
*Contrasting features:* Loamy over sandy profile

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability of the Orovada soil for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—very poor

*Suitability of the Goldrun soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—very poor; shallow water areas—very poor

#### **Ratings and Restrictive Features of the Orovada Soil for Selected Uses and Practices**

*Range seeding:* Fair—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—frost action  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—small stones, thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping  
*Drainage:* Deep to water  
*Irrigation:* Soil blowing, erodes easily  
*Terraces and diversions:* Erodes easily, soil blowing

#### **Ratings and Restrictive Features of the Goldrun Soil for Selected Uses and Practices**

*Range seeding:* Poor—soil blowing, too sandy  
*Daily cover for landfill:* Poor—too sandy  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, seepage

*Drainage:* Deep to water

*Irrigation:* Droughty, fast intake, soil blowing

*Terraces and diversions:* Too sandy, soil blowing

### **Interpretive Groups**

*Capability classification:* Orovada soil—IIc, irrigated, and VIc, nonirrigated; Goldrun soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Orovada soil—024X020N; Goldrun soil—024X001N

## **704—Orovada-Kodra-Puett association**

### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 5,000 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Orovada loam, 8 to 15 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—40 percent
- Kodra silt loam, 8 to 15 percent slopes—Haploxerollic Durorthids, coarse-loamy, mixed, mesic—30 percent
- Puett gravelly sandy loam, 15 to 30 percent slopes, very stony—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—7 percent
- Inclusion 2: Xeric Torriorthents, 2 to 8 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—3 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

### **Typical Profile**

0 to 8 inches—loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; soft, very friable; mildly alkaline (pH 7.4); nonsaline (less than

2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.5 to 9.7 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Kodra Soil**

*Position on landscape:* Upper summits and shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Thurber needlegrass, Wyoming big sagebrush, bluebunch wheatgrass

#### **Typical Profile**

0 to 4 inches—silt loam; 0 to 25 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

4 to 30 inches—loam, sandy loam; 0 to 25 percent pebbles (by weight); subangular blocky structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4, A-2

30 to 51 inches or more—strongly cemented duripan; massive; extremely hard, very firm

#### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 4.1 to 5.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Puett Soil**

*Position on landscape:* Side slopes of fan piedmont remnants near locally exposed soft bedrock core

*Parent material:* Kind—residuum; source—soft tuffaceous rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Indian ricegrass, black sagebrush, Wyoming big sagebrush

*Rock fragments on surface:* Kind—stones; percentage of surface covered—2

#### **Typical Profile**

0 to 4 inches—gravelly sandy loam; 5 to 10 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4

4 to 15 inches—coarse sandy loam, gravelly sandy loam, loam; 10 to 50 percent pebbles (by weight); massive; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML, GM; estimated AASHTO classification—A-1, A-2, A-4

15 inches—weathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Eroded side slopes of fan piedmont remnants with a locally exposed bedrock core

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Inset fans and channels

*Contrasting features:* Very gravelly substratum

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Kodra soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Puett soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid, erodes easily

*Daily cover for landfill:* Fair—slope

*Shallow excavations:* Moderate—slope

*Local roads and streets:* Moderate—frost action, slope

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, slope, thin layer

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Kodra Soil for Selected Uses**

*Range seeding:* Fair—too arid, erodes easily

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Moderate—cemented pan, frost action, slope

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—cemented pan, small stones, thin layer

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Puett Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—seepage, piping

### **Interpretive Groups**

*Capability classification:* Orovada soil—IVe, irrigated, and VIc, nonirrigated; Kodra soil—IVe, irrigated, and VIs, nonirrigated; Puett soil—VIIe, nonirrigated

*Range site:* Orovada soil—024X005N; Kodra soil—024X005N; Puett soil—025X025N

## **705—Orovada-Cremon complex**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Orovada fine sandy loam, 2 to 8 percent slopes, eroded—Durixerollic Camborthids, coarse-loamy, mixed, mesic—45 percent

- Cremon silt loam, 2 to 8 percent slopes, eroded—Duric Camborthids, coarse-silty, mixed, mesic—45 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 2 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 2: Davey fine sandy loam, 2 to 4 percent slopes—Xerollic Camborthids, sandy, mixed, mesic—5 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Upper fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass, Indian ricegrass

### Typical Profile

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Creemon Soil

*Position on landscape:* Lower fan skirts

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

### Typical Profile

0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

10 to 15 inches—very fine sandy loam, silt loam;

subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.7 to 11.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Smooth to convex higher areas of fan skirts

*Contrasting features:* Fine sandy loam subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Smooth to concave sand sheets overplacing parts of fan skirts

*Contrasting features:* Sandy substratum

*Distinctive present vegetation:* Indian ricegrass, needleandthread, big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability of the Orovada soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses

and legumes (irrigated)—fair; wild herbaceous plants—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—very poor

*Suitability of the Creemon soil for named elements:*

Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features of the Orovada Soil for Selected Uses and Practices**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Soil blowing, slope, erodes easily

*Terraces and diversions:* Erodes easily, soil blowing

**Ratings and Restrictive Features of the Creemon Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Slope, erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* Orovada soil—IIIe, irrigated, and VIc, nonirrigated; Creemon soil—IIIe, irrigated, and VIIc, nonirrigated

*Range site:* Orovada soil—024X020N; Creemon soil—024X002N

**706—Orovada-Wieland-Chiara association**

**Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,500 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

**Composition**

*Major components:*

- Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—45 percent

- Wieland gravelly loam, 2 to 8 percent slopes—Durixerollic Haplargids, fine, montmorillonitic, mesic—25 percent

- Chiara fine sandy loam, 2 to 8 percent slopes—Xerollic Durorthids, loamy, mixed, mesic, shallow—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-silty, mixed, mesic—8 percent

- Inclusion 2: Aridic Haploxerolls, 2 to 4 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, mesic—5 percent

- Inclusion 3: Xeric Torriorthents, 2 to 4 percent slopes—Xeric Torriorthents, sandy-skeletal, mixed, mesic—2 percent

**Characteristics of the Orovada Soil**

*Position on landscape:* Broad inset fans

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bluegrass, Indian ricegrass

**Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

**Characteristics of the Wieland Soil**

*Position on landscape:* Summits and shoulder slopes of upper fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—smooth to convex  
*Dominant present vegetation:* Wyoming big sagebrush, bluegrass, Indian ricegrass

**Typical Profile**

0 to 5 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL, SC; estimated AASHTO classification—A-6  
 5 to 26 inches—gravelly clay, clay; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7  
 26 to 52 inches—gravelly sandy clay loam, gravelly clay loam; 0 to 5 percent cobbles and stones and 30 to 50 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.5); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6  
 52 to 60 inches or more—loam, gravelly loam, gravelly sandy loam; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, SM-SC; estimated AASHTO classification—A-4, A-2

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 5.7 to 9.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

**Characteristics of the Chiara Soil**

*Position on landscape:* Summits of lower fan piedmont remnants  
*Parent material:* Loess mantle high in volcanic ash over mixed alluvium  
*Slope features:* Length—short; smooth to slightly convex  
*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, pine bluegrass, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

0 to 5 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4  
 5 to 16 inches—very fine sandy loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 16 inches—indurated duripan; massive; extremely hard, extremely firm

**Soil and Water Features**

*Depth to hardpan:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.4 to 2.8 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth to slightly convex fan skirts adjacent to fan piedmonts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth to slightly concave higher parts of inset fans

*Contrasting features:* Very deep, very gravelly

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### **Inclusion 3**

*Position on landscape:* Adjacent to concave channels

*Contrasting features:* Very gravelly sand throughout the profile

*Distinctive present vegetation:* Basin big sagebrush, rabbitbrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Wieland soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Chiara soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, thin layer

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Wieland Soil for Selected Uses**

*Range seeding:* Poor—rooting depth

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Moderate—thin layer

#### **Ratings of the Chiara Soil for Selected Uses**

*Range seeding:* Fair—droughty

*Daily cover for landfill:* Poor—cemented pan

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—frost action, piping, thin layer

### **Interpretive Groups**

*Capability classification:* Orovada soil—IIIe, irrigated, and VIc, nonirrigated; Wieland soil—IIIe, irrigated, and VIs, nonirrigated; Chiara soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Orovada soil—024X005N; Wieland soil—024X005N; Chiara soil—024X005N

## **707—Orovada-Goldrun association**

### **Map Unit Setting**

*Position on landscape:* Interhill alluvial fans

*Elevation:* 4,500 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—70 percent

- Goldrun fine sand, 4 to 15 percent slopes—Xeric Torripsamments, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, fine-loamy, mixed, mesic—5 percent

- Inclusion 2: Durixerollic Camborthids, stony very fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—4 percent

- Inclusion 3: Rock outcrop—1 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Alluvial fans

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Thurber needlegrass,  
Wyoming big sagebrush, bluebunch wheatgrass

### Typical Profile

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Goldrun Soil

*Position on landscape:* Sand sheets overplacing alluvial fans

*Parent material:* Mixed eolian sands influenced by volcanic ash

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Indian ricegrass, basin big sagebrush, needleandthread

### Typical Profile

0 to 7 inches—fine sand; massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified

classification—SM; estimated AASHTO classification—A-2

7 to 60 inches or more—fine sand; massive; slightly hard, very friable; moderately alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Rapid

*Available water capacity:* 4.2 to 5.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—1

*Hazard of erosion:* By water—slight; by wind—severe

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial fan remnants

*Contrasting features:* Clay loam subsoil

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Upper margins of alluvial fans

*Contrasting features:* Stony surface layer

*Distinctive present vegetation:* Wyoming big sagebrush, Thurber needlegrass

#### Inclusion 3

*Position on landscape:* Nonburied, scattered bedrock outcroppings of hills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Goldrun soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Orovada Soil for Selected Uses

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—small stones, thin layer  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Goldrun Soil for Selected Uses**

*Range seeding:* Poor—soil blowing, too sandy  
*Daily cover for landfill:* Poor—too sandy  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Moderate—slope  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—too sandy  
*Pond reservoir areas:* Severe—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping, seepage

#### **Interpretive Groups**

*Capability classification:* Orovada soil—IIIe, irrigated, and VIc, nonirrigated; Goldrun soil—IVs, irrigated, and VIIs, nonirrigated  
*Range site:* Orovada soil—024X005N; Goldrun soil—024X001N

### **708—Orovada-Reina-Rock outcrop association**

#### **Map Unit Setting**

*Position on landscape:* Foothills  
*Elevation:* 5,000 to 6,000 feet  
*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

##### **Major components:**

- Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—45 percent
- Reina loam, 15 to 30 percent slopes—Xerollic Durargids, clayey-skeletal, montmorillonitic, mesic, shallow—25 percent
- Rock outcrop—20 percent

##### **Contrasting inclusions:**

- Inclusion 1: Xeric Torriorthents, 15 to 50 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 2: Xerollic Camborthids, 30 to 50 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

#### **Characteristics of the Orovada Soil**

*Position on landscape:* Inset fans between foothills  
*Parent material:* Loess high in volcanic ash over mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, spiny hopsage

#### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4  
 8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

#### **Characteristics of the Reina Soil**

*Position on landscape:* East-, west-, and south-facing side slopes of foothills  
*Parent material:* Kind—residuum; source—andesite, basalt, tuffs, and quartzite  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, spiny hopsage, Thurber needlegrass

### Typical Profile

- 0 to 7 inches—loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4
- 7 to 18 inches—very gravelly clay, very gravelly clay loam; 10 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); prismatic structure; very hard, firm; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM; estimated AASHTO classification—A-2, A-7
- 18 to 26 inches—indurated duripan; massive; very hard, very firm
- 26 inches—unweathered bedrock

### Soil and Water Features

- Depth to hardpan:* 14 to 20 inches
- Depth to bedrock:* 22 to 30 inches
- Depth to seasonal high water table:* More than 60 inches
- Frequency of flooding:* None
- Permeability:* Slow
- Available water capacity:* 2.0 to 2.6 inches
- Water-supplying capacity:* 8 inches
- Runoff:* Rapid
- Hydrologic group:* D
- Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—5
- Hazard of erosion:* By water—slight; by wind—slight
- Shrink-swell potential:* Moderate
- Corrosivity:* To steel—high; to concrete—low
- Potential frost action:* Low

### Characteristics of Rock Outcrop

- Position on landscape:* Rimrock and eroded side slopes of foothills
- Slope features:* Length—short; concave to convex
- Dominant present vegetation:* Barren

### Contrasting Inclusions

#### Inclusion 1

- Position on landscape:* Colluvial foot slopes of foothills
- Contrasting features:* Deep, very gravelly
- Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

- Position on landscape:* North-facing side slopes of foothills
- Contrasting features:* Moderately deep to bedrock
- Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

- Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair
- Suitability of the Reina soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Orovada Soil for Selected Uses

- Range seeding:* Fair—too arid
- Daily cover for landfill:* Good
- Shallow excavations:* Slight
- Local roads and streets:* Moderate—frost action
- Roadfill:* Good
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Fair—small stones, thin layer
- Pond reservoir areas:* Moderate—seepage, slope
- Embankments, dikes, and levees:* Severe—piping

#### Ratings of the Reina Soil for Selected Uses

- Range seeding:* Poor—droughty
- Daily cover for landfill:* Poor—slope, depth to bedrock, small stones
- Shallow excavations:* Severe—cemented pan, depth to bedrock, slope
- Local roads and streets:* Cemented pan, slope
- Roadfill:* Poor—cemented pan, depth to bedrock
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—cemented pan, small stones, slope
- Pond reservoir areas:* Severe—cemented pan, slope
- Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

- Capability classification:* Orovada soil—IIIe, irrigated, and VIc, nonirrigated; Reina soil—IVe, irrigated, and VIIe, nonirrigated
- Range site:* Orovada soil—024X020N; Reina soil—024X005N

### 709—Orovada-Sodhouse association

#### Map Unit Setting

- Position on landscape:* Piedmont slopes
- Elevation:* 4,400 to 4,800 feet
- Average annual precipitation:* About 8 inches
- Average annual air temperature:* About 48 degrees F
- Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Orovada fine sandy loam, 8 to 15 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—50 percent
- Sodhouse stony very fine sandy loam, 8 to 15 percent slopes—Typic Durorthids, loamy, mixed, mesic, shallow—40 percent

#### *Contrasting inclusions:*

- Inclusion 1: Xerollic Durorthids, 8 to 15 percent slopes—Xerollic Durorthids, coarse-loamy, mixed, mesic—10 percent

### **Characteristics of the Orovada Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, basin wildrye, bottlebrush squirreltail

#### **Typical Profile**

0 to 8 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

8 to 20 inches—loam, fine sandy loam; 5 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Sodhouse Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

*Surface cover:* 2 percent stones

#### **Typical Profile**

0 to 10 inches—stony very fine sandy loam; 5 to 15 percent cobbles and stones and 10 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, GM, SM; estimated AASHTO classification—A-4

10 to 17 inches—fine sandy loam, loam, very fine sandy loam; 10 to 25 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

17 to 29 inches—indurated duripan; massive

29 to 60 inches or more—extremely gravelly sandy loam, very gravelly loamy sand; 5 to 20 percent cobbles and stones and 50 to 85 percent pebbles (by weight); massive; very hard, firm; strongly alkaline (pH 9.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to hardpan:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.1 to 2.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.49; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* On-fan drainageways of fan piedmont remnants

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Orovada soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Sodhouse soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Orovada Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Fair—slope

*Shallow excavations:* Moderate—slope

*Local roads and streets:* Moderate—frost action, slope

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, slope, thin layer

*Pond reservoir areas:* Slope

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Sodhouse Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—cemented pan, seepage, small stones

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones, area reclaim

*Pond reservoir areas:* Severe—slope, cemented pan, seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Orovada soil—IVe, irrigated, and VIc, nonirrigated; Sodhouse soil—VIIs, nonirrigated

*Range site:* Orovada soil—024X020N; Sodhouse soil—024X002N

## **711—Paranat silty clay loam**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 100 days

### **Composition**

*Major components:*

- Paranat silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Humboldt silty clay loam, moderately saline, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—5 percent
- Inclusion 2: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Paranat Soil**

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Spikerush, sedge, rush, curly dock, creeping wildrye, inland saltgrass

### **Typical Profile**

0 to 20 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

20 to 48 inches—stratified silty clay loam to silt loam; prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

48 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* November through

June—18 to 42 inches; rest of year—below 42 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through June

*Permeability:* Moderately slow

*Available water capacity:* 11.5 to 13.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Depressions and backwater channels on flood plains

*Contrasting features:* Clayey throughout the profile

*Distinctive present vegetation:* Silver sagebrush

#### **Inclusion 2**

*Position on landscape:* Small irregularly shaped areas adjacent to channels

*Contrasting features:* Lower water table during spring

*Distinctive present vegetation:* Sedges

#### **Inclusion 3**

*Position on landscape:* Small irregularly shaped areas on flood plains along the outer margin of the delineation

*Contrasting features:* Less organic matter in the surface layer

*Distinctive present vegetation:* Sedge, rose

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, wetness

*Drainage:* Flooding, frost action

*Irrigation:* Wetness, erodes easily, flooding

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* Vw, irrigated, and Vw, nonirrigated

*Range site:* 025X001N

## **713—Paranat silty clay loam, drained**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Paranat silty clay loam, drained, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Sonoma silty clay loam, drained, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—10 percent

- Inclusion 2: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Paranat Soil**

*Position on landscape:* Deeply incised and channeled flood plain remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Basin wildrye, alkali sacaton, black greasewood

### **Typical Profile**

0 to 20 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 15 to 30); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7  
20 to 60 inches or more—silty clay loam, silt loam;

massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

### Soil and Water Features

*Depth to seasonal high water table:* February through May—60 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.5 to 13.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Outer margins of flood plain remnants

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Black greasewood, basin wildrye

#### Inclusion 2

*Position on landscape:* Alluvial flat remnants adjacent to flood plains

*Contrasting features:* Strongly sodic upper soil profile

*Distinctive present vegetation:* Black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Moderate—wetness

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X007N

## 714—Paranat silty clay loam, occasionally flooded

### Map Unit Setting

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Paranat silty clay loam, 0 to 2 percent slopes, occasionally flooded—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Rixie silty clay loam, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—10 percent
- Inclusion 2: Sonoma silty clay loam, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### Characteristics of the Paranat Soil

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, silver sagebrush, creeping wildrye, inland saltgrass, alkali sacaton, basin wildrye

### Typical Profile

0 to 20 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm);

nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

20 to 48 inches—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

48 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

### Soil and Water Features

*Depth to seasonal high water table:* November through July—18 to 42 inches; rest of year—below 42 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—December through May

*Permeability:* Moderately slow

*Available water capacity:* 11.5 to 13.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent to backwater channels

*Contrasting features:* Frequently flooded for short periods in early spring

*Distinctive present vegetation:* Sedges

#### Inclusion 2

*Position on landscape:* Small higher areas of flood plains

*Contrasting features:* Less organic matter in the surface layer

*Distinctive present vegetation:* Alkali cordgrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants

(nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, wetness

*Drainage:* Flooding, frost action

*Irrigation:* Wetness, erodes easily, flooding

*Terraces and diversions:* Erodes easily, wetness

### Interpretive Groups

*Capability classification:* Vw, irrigated, and Vw, nonirrigated

*Range site:* 024X007N

## 731—Yipor silt loam, moderately saline-sodic

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Yipor silt loam, moderately saline-sodic, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—3 percent

- Inclusion 3: Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—2 percent

### Characteristics of the Yipor Soil

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### Typical Profile

0 to 8 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 8 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; moderately to strongly saline (8 to 25 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 9.4 to 11.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial flat remnants adjacent to fan skirts

*Contrasting features:* Moderately well drained, silty clay loam substratum

*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Depressional areas adjacent to lower margins of fan skirts

*Contrasting features:* Clayey substratum

*Distinctive present vegetation:* Saltbush

#### Inclusion 3

*Position on landscape:* Shallow fan drainageways

*Contrasting features:* Strongly saline surface layer

*Distinctive present vegetation:* Saltbush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

## 740—Playas

### Map Unit Setting

*Position on landscape:* Bolson floors

*Elevation:* 4,500 to 5,600 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 100 days

### Composition

*Major components:*

- Playas—100 percent

### Characteristics of the Playas

*Position on landscape:* Lowest sink area of bolson floors

*Slope features:* Length—long; shape—smooth or slightly concave

*Dominant present vegetation:* None

**770—Prida silt loam****Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Prida silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed, (calcareous), mesic—5 percent
- Inclusion 3: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent
- Inclusion 4: Duffer very fine sandy loam, 0 to 2 percent slopes—Aquic Calciorthids, fine-silty, carbonatic, mesic—2 percent

**Characteristics of the Prida Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Silty mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, saltbush, seepweed, inland saltgrass, alkali sacaton

**Typical Profile**

- 0 to 7 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4
- 7 to 60 inches or more—silt loam, silty clay loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-4, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* January through December—36 to 60 inches; rest of year—below 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Low areas of alluvial flats

*Contrasting features:* Water table at a depth of 30 to 36 inches throughout the year

*Distinctive present vegetation:* Black greasewood, basin wildrye

**Inclusion 2**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

**Inclusion 3**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Well drained

*Distinctive present vegetation:* Black greasewood, shadscale

**Inclusion 4**

*Position on landscape:* Stream terraces adjacent to alluvial flats

*Contrasting features:* Horizon of calcium carbonate accumulation

*Distinctive present vegetation:* Alkali sacaton, saltbush

**Other inclusions of minor extent**

*Position on landscape:* Lower alluvial flat remnants

*Contrasting features:* Clayey substratum

*Distinctive present vegetation:* Alkali sacaton, saltbush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt  
*Shallow excavations:* Moderate—too clayey, wetness  
*Local roads and streets:* Severe—low strength, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Percs slowly, erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated  
*Range site:* 024X010N

## **774—Prida-Sonoma silty clay loams**

### **Map Unit Setting**

*Position on landscape:* Basin floor  
*Elevation:* 4,400 to 4,800 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Prida silty clay loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—60 percent
- Sonoma silty clay loam, strongly saline, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—30 percent

#### *Contrasting inclusions:*

- Inclusion 1: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Prida Soil**

*Position on landscape:* Alluvial flats  
*Parent material:* Silty mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, saltbush, iodinebush, inland saltgrass, alkali sacaton

### **Typical Profile**

0 to 7 inches—silty clay loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 7 to 62 inches or more—silt loam, silty clay loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 40 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-4, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* January through December—36 to 60 inches; rest of year—below 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* High

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Flood plains  
*Parent material:* Silty mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Alkali sacaton, alkali muhly

### **Typical Profile**

0 to 8 inches—silty clay loam; subangular blocky structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 60 to 80); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 8 to 60 inches or more—silty clay loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through

June—18 to 36 inches; rest of year—below 36 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Low areas of alluvial flats adjacent to flood plains

*Contrasting features:* Strongly sodium affected in the upper part of the profile, slightly affected in the lower part

*Distinctive present vegetation:* Black greasewood, basin wildrye

#### **Inclusion 2**

*Position on landscape:* Alluvial flat remnants adjacent to flood plains

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture

#### **Wildlife habitat elements:**

*Suitability of the Prida soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Sonoma soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features of the Prida Soil for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Moderate—too clayey, wetness

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Percs slowly, erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Ratings and Restrictive Features of the Sonoma Soil for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—excess salt, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, wetness

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, perc slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* Prida soil—VIw, irrigated, and VIIw, nonirrigated; Sonoma soil—VIw, irrigated, and VIIw, nonirrigated

*Range site:* Prida soil—024X010N; Sonoma soil—024X009N

## **780—Pumper silt loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,800 to 5,100 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

• Pumper silt loam, 0 to 2 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—85 percent

*Contrasting inclusions:*

• Inclusion 1: Creemon silt loam, 0 to 2 percent

slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

- Inclusion 2: Hessing silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### **Characteristics of the Pumper Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess high in volcanic ash over sandy mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 12 inches—silt loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4

12 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sand; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); massive; hard, friable; moderately alkaline (pH 8.3); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GP, GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 3.1 to 4.8 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth, slightly higher fan-skirt remnants

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth, fan drainageways of fan skirts

*Contrasting features:* Loamy throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silty clay loam subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—very poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—too sandy, small stones, seepage

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—too arid, area reclaim, small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

*Drainage:* Deep to water

*Irrigation:* Droughty

*Terraces and diversions:* Erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* IVs, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## **800—Raglan silt loam, gravelly substratum**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,600 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Raglan silt loam, gravelly substratum, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

### Characteristics of the Raglan Soil

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 47 inches—stratified fine sandy loam to silt loam; 0 to 5 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6

47 to 60 inches or more—stratified gravelly sandy loam to very gravelly coarse sand; 40 to 60 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SP-SM, SM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 8.3 to 9.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper margins of fan skirts

*Contrasting features:* Slightly coarser textured subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Adjacent smooth inset fans

*Contrasting features:* Silt loam subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silt loam subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Moderate—excess salt, thin layer, piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **804—Raglan silty clay loam, moderately saline**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Raglan silty clay loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent
- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—3 percent
- Inclusion 4: Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—3 percent

### **Characteristics of the Raglan Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loamy mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, seepweed

### **Typical Profile**

- 0 to 8 inches—silty clay loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-7
- 8 to 47 inches—stratified fine sandy loam to silt loam; 0 to 5 percent pebbles (by weight); massive; hard,

friable; strongly alkaline (pH 8.8); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6

47 to 60 inches or more—stratified gravelly sandy loam to very gravelly coarse sand; 40 to 60 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SP-SM, SM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 8.3 to 9.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper margins of fan skirts

*Contrasting features:* Fine sandy loam throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Silt loam throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Fan skirt remnants

*Contrasting features:* Silt loam throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 4**

*Position on landscape:* Alluvial flat remnants adjacent to fan skirts

*Contrasting features:* Silty clay loam substratum

*Distinctive present vegetation:* Saltbush

#### **Other inclusions of minor extent**

*Position on landscape:* Small depressional areas and extensions of the main playas

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat; irrigated cropland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

#### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Moderate—excess salt, thin layer, piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

## 805—Raglan silt loam

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,700 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Raglan silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—4 percent
- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent

- Inclusion 3: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent
- Inclusion 4: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—3 percent

### Characteristics of the Raglan Soil

*Position on landscape:* Broad fan skirts

*Parent material:* Loess high in volcanic ash over mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

### Typical Profile

0 to 6 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

6 to 14 inches—silt loam; 0 to 5 percent pebbles (by weight); subangular blocky structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4, A-6

14 to 60 inches or more—stratified very fine sandy loam to silty clay loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL, ML; estimated AASHTO classification—A-4, A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.3 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper margins of fan skirts

*Contrasting features:* Silty substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Alluvial flats adjacent to fan skirts

*Contrasting features:* Strongly saline surface layers

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 3**

*Position on landscape:* Recent adjacent alluvial flats

*Contrasting features:* Very fine sandy loam substratum

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 4**

*Position on landscape:* Remnants of fan skirts adjacent to alluvial flats

*Contrasting features:* Silt loam substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **814—Quarz-Linrose-Slaven association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,400 to 7,600 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Quarz very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—40 percent

- Linrose very gravelly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—30 percent

- Slaven extremely gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Haploxerolls, 8 to 30 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent

- Inclusion 2: Glean gravelly silt loam, 30 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent

- Inclusion 3: Rock outcrop—3 percent

- Inclusion 4: Rubble land—2 percent

### **Characteristics of the Quarz Soil**

*Position on landscape:* East-, west-, and upper south-facing side slopes of mountains

*Parent material:* Kind—residuum; source—shale and sandstone

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Sandberg bluegrass

*Surface cover:* 15 percent pebbles

### **Typical Profile**

0 to 7 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

7 to 26 inches—very gravelly clay, very gravelly clay loam; 0 to 25 percent cobbles and stones and 50 to 75 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR

less than 2); estimated Unified classification—GC;  
estimated AASHTO classification—A-2, A-7  
26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 2.2 to 2.7 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—  
2; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Linrose Soil

*Position on landscape:* North-facing side slopes of  
mountains  
*Parent material:* Kind—residuum and colluvium;  
source—chert, shale and quartzite  
*Slope features:* Length—long; shape—convex  
*Dominant present vegetation:* Black sagebrush, Idaho  
fescue, Indian ricegrass, rabbitbrush

### Typical Profile

0 to 8 inches—very gravelly loam; 0 to 15 percent  
cobbles and stones and 50 to 65 percent pebbles  
(by weight); platy structure; slightly hard, friable;  
mildly alkaline (pH 7.8); nonsaline (less than 2  
mmhos/cm); nonsodic (SAR less than 2); estimated  
Unified classification—GM; estimated AASHTO  
classification—A-2, A-4, A-1  
8 to 26 inches—very gravelly loam, very gravelly sandy  
loam; 0 to 15 percent cobbles and stones and 50 to  
70 percent pebbles (by weight); subangular blocky  
structure; slightly hard, friable; mildly alkaline (pH  
7.6); nonsaline (less than 2 mmhos/cm); nonsodic  
(SAR less than 2); estimated Unified classification—  
GC, GM-GC; estimated AASHTO classification—A-2  
26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.2 to 3.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—  
2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Slaven Soil

*Position on landscape:* Lower, south-facing side slopes  
of mountains  
*Parent material:* Kind—residuum; source—chert, shale,  
and quartzite  
*Slope features:* Length—long; shape—concave to  
convex  
*Dominant present vegetation:* Mountain big sagebrush,  
bluebunch wheatgrass, Sandberg bluegrass

### Typical Profile

0 to 5 inches—extremely gravelly loam; 10 to 20  
percent cobbles and stones and 75 to 85 percent  
pebbles (by weight); subangular blocky structure;  
soft, very friable; neutral (pH 6.8); nonsaline (less  
than 2 mmhos/cm); nonsodic (SAR less than 2);  
estimated Unified classification—GC; estimated  
AASHTO classification—A-2  
5 to 22 inches—extremely gravelly clay, extremely  
gravelly sandy clay, extremely gravelly clay loam;  
75 to 85 percent pebbles (by weight); subangular  
blocky structure; hard, friable; neutral (pH 7.0);  
nonsaline (less than 2 mmhos/cm); nonsodic (SAR  
less than 2); estimated Unified classification—GC;  
estimated AASHTO classification—A-2  
22 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 2.0 to 2.6 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.10; T value—  
2; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests and shoulder slopes of mountains

*Contrasting features:* Very cobbly surface layer

*Distinctive present vegetation:* Low sagebrush

#### **Inclusion 2**

*Position on landscape:* Concave snow pockets below shoulder slopes of mountains

*Contrasting features:* Thick, dark colored surface layer

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush

#### **Inclusion 3**

*Position on landscape:* Rimrock and scattered peaks of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 4**

*Position on landscape:* Rock screes below rimrock

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Quarz soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Quarz Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, slope, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—thin layer, large stones

#### **Ratings of the Linrose Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Slaven Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Quarz soil—VIIIs, nonirrigated; Linrose soil—VIIIs, nonirrigated; Slaven soil—VIIIs, nonirrigated

*Range site:* Quarz soil—024X029N; Linrose soil—024X042N; Slaven soil—024X029N

## **816—Quarz-Linrose-Cleavage association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,500 to 7,900 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Quarz cobbly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—50 percent
- Linrose very cobbly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—20 percent
- Cleavage extremely cobbly loam, 50 to 75 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Graley extremely gravelly loam, 30 to 50

percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—5 percent

• Inclusion 2: Aridic Argixerolls, 15 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—5 percent

• Inclusion 3: Aridic Argixerolls, 15 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—5 percent

### **Characteristics of the Quarz Soil**

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—shale and sandstone

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Antelope bitterbrush, mountain big sagebrush, bluebunch wheatgrass, Idaho fescue

### **Typical Profile**

0 to 7 inches—cobbly loam; 25 to 30 percent cobbles and stones and 10 to 20 percent pebbles (by weight); granular structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

7 to 26 inches—very gravelly clay, very gravelly clay loam; 0 to 25 percent cobbles and stones and 50 to 75 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.2 to 2.7 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Linrose Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—chert, shale and quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, snowberry, mountain brome

### **Typical Profile**

0 to 8 inches—very cobbly loam; 30 to 45 percent cobbles and stones and 30 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, SM; estimated AASHTO classification—A-2, A-4

8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.2 to 3.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crests, shoulders, and upper side slopes of mountains

*Parent material:* Kind—residuum; source—volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, Idaho fescue, bluegrass

### **Typical Profile**

0 to 4 inches—extremely cobbly loam; 45 to 55 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified

classification—GM-GC, GC; estimated AASHTO classification—A-2

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave upper side slopes of mountains

*Contrasting features:* Bedrock within a depth of 20 inches, very gravelly clay subsoil

#### Inclusion 2

*Position on landscape:* Convex areas on south- and west-facing side slopes of mountains

*Contrasting features:* Very deep soil that has a very clayey subsoil

*Distinctive present vegetation:* Low sagebrush

#### Inclusion 3

*Position on landscape:* Concave snow pockets on north- and east-facing side slopes of mountains

*Contrasting features:* Additional moisture from drifted snow

*Distinctive present vegetation:* Serviceberry, Idaho fescue

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Quarz soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Quarz Soil for Selected Uses

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—thin layer, large stones

### Ratings of the Linrose Soil for Selected Uses

*Range seeding:* Poor—droughty, large stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Cleavage Soil for Selected Uses

*Range seeding:* Poor—large stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### Interpretive Groups

*Capability classification:* Quarz soil—VIIIs, nonirrigated; Linrose soil—VIIIs, nonirrigated; Cleavage soil—VIIIs, nonirrigated

*Range site:* Quarz soil—025X009N; Linrose soil—024X042N; Cleavage soil—025X024N

**830—Reese silt loam****Map Unit Setting**

*Position on landscape:* Basin floor

*Elevation:* 4,400 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Argenta very fine sandy loam, 0 to 2 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

**Characteristics of the Reese Soil**

*Position on landscape:* Flood plains

*Parent material:* Loamy mixed alluvium high in pyroclastics

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, shadscale, basin wildrye, spiny horsebrush, inland saltgrass

**Typical Profile**

0 to 9 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

9 to 60 inches or more—stratified silt loam to silty clay loam; massive; hard, friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

**Soil and Water Features**

*Depth to seasonal high water table:* March through July—18 to 36 inches; rest of year—below 36 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—April through May

*Permeability:* Slow

*Available water capacity:* 9.2 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Concave alluvial flats

*Contrasting features:* Sandy loam throughout the profile  
*Distinctive present vegetation:* Black greasewood, inland saltgrass

**Inclusion 2**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Iodinebush, alkali sacaton

**Inclusion 3**

*Position on landscape:* Convex alluvial flats

*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Black greasewood, basin wildrye

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture

**Potential uses:** Rangeland, wildlife habitat, irrigated native pasture, homesites

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess sodium

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Fair—low strength, shrink-swell, wetness

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess sodium, excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—wetness, excess sodium, excess salt

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness, percs slowly

### ***Interpretive Groups***

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X011N

## **835—Reese-Ocala association**

### ***Map Unit Setting***

*Position on landscape:* Basin floor

*Elevation:* 4,600 to 4,700 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### ***Composition***

*Major components:*

- Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—45 percent

- Ocala silt loam, strongly saline-sodic, 0 to 2 percent slopes, rarely flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents, 0 to 2 percent slopes—Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic—9 percent

- Inclusion 2: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—1 percent

### ***Characteristics of the Reese Soil***

*Position on landscape:* Flood plains near river channels

*Parent material:* Kind—loamy alluvium high in pyroclastics; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, seepweed, pickleweed, saltbush

### ***Typical Profile***

0 to 9 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

9 to 60 inches or more—stratified silt loam to silty clay loam; massive; hard, friable; strongly alkaline (pH

9.0); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### ***Soil and Water Features***

*Depth to seasonal high water table:* March through July—18 to 36 inches; rest of year—below 36 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—April through May

*Permeability:* Slow

*Available water capacity:* 9.2 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### ***Characteristics of the Ocala Soil***

*Position on landscape:* Outer margins of flood plains and alluvial flats

*Parent material:* Silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, basin wildrye

### ***Typical Profile***

0 to 6 inches—silt loam; platy structure; slightly hard, friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-4

6 to 13 inches—silt loam, silty clay loam; massive; hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

13 to 60 inches or more—silt loam, silty clay loam; massive; hard, friable and brittle; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### ***Soil and Water Features***

*Depth to seasonal high water table:* March through May—42 to 60 inches; rest of year—below 60 inches

*Frequency of flooding:* Rare  
*Permeability:* Slow  
*Available water capacity:* 11.4 to 17.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth stream terraces  
*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Black greasewood

#### **Inclusion 2**

*Position on landscape:* Smooth alluvial flats  
*Contrasting features:* Frequently flooded  
*Distinctive present vegetation:* Black greasewood, basin wildrye

#### **Inclusion 3**

*Position on landscape:* Smooth alluvial flat remnants  
*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Black greasewood, shadscale

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Reese soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Ocala soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

#### **Ratings of the Reese Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Poor—excess sodium  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—flooding, frost action  
*Roadfill:* Poor—low strength, shrink-swell, wetness  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess sodium, excess salt  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—wetness, excess sodium, wetness

#### **Ratings of the Ocala Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Poor—excess sodium  
*Shallow excavations:* Moderate—wetness  
*Local roads and streets:* Severe—low strength, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Interpretive Groups**

*Capability classification:* Reese soil—VIIw, nonirrigated; Ocala soil—VIIw, nonirrigated  
*Range site:* Reese soil—024X011N; Ocala soil—024X011N

## **841—Wendane Variant silt loam**

### **Map Unit Setting**

*Position on landscape:* Basin floor remnants  
*Elevation:* 5,600 to 5,700 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free season:* About 100 days

### **Composition**

#### **Major components:**

• Wendane Variant silt loam, 0 to 2 percent slopes—Aeric Halaquepts, loamy-skeletal, mixed (calcareous), mesic—95 percent

#### **Contrasting inclusions:**

• Inclusion 1: Whirlo very gravelly loam, 0 to 2 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Wendane Variant Soil**

*Position on landscape:* Basin floor remnants  
*Parent material:* Loess, volcanic ash, and mixed alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Alkali muhly, alkali sacaton, Indian ricegrass, alkali cordgrass

### **Typical Profile**

0 to 10 inches—silt loam; subangular blocky structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

10 to 18 inches—gravelly silt loam; 30 to 50 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, CL, GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6

18 to 60 inches or more—very gravelly loam; 50 to 65 percent pebbles (by weight); massive; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through June—18 to 30 inches; rest of year—below 30 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 6.7 to 7.9 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial fans adjacent to basin floors

*Contrasting features:* Well drained

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture

**Potential uses:** Rangeland, wildlife habitat, irrigated pasture and hayland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants

(nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—fair

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones, excess sodium

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—frost action

*Roadfill:* Fair—wetness, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—wetness, excess salt, excess sodium

*Drainage:* Frost action, excess salt

*Irrigation:* Wetness, excess salt, erodes easily

*Terraces and diversions:* Erodes easily, wetness

### Interpretive Groups

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X009N

## 850—Relley silt loam

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent

- Inclusion 3: Bubus very fine sandy loam—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent

- Inclusion 4: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—3 percent

### Characteristics of the Relley Soil

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, cheatgrass

## Typical Profile

- 0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 28 to 63 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

## Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

## Contrasting Inclusions

### Inclusion 1

*Position on landscape:* Slightly concave areas of fan skirts  
*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Inclusion 2

*Position on landscape:* Concave alluvial flat remnants adjacent to fan skirts  
*Contrasting features:* Calcareous and moderately saline-sodic throughout the profile

*Distinctive present vegetation:* Shadscale, black greasewood

### Inclusion 3

*Position on landscape:* Concave alluvial flat remnants adjacent to fan skirts  
*Contrasting features:* Calcareous and loamy throughout the profile  
*Distinctive present vegetation:* Shadscale, black greasewood

### Inclusion 4

*Position on landscape:* Adjacent slightly concave inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Winterfat

## Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

## Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

## Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—low strength, shrink-swell  
*Roadfill:* Fair—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—thin layer  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

## Interpretative Groups

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated  
*Range site:* 024X002N

## 851—Relley silt loam, cemented substratum

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Relley silt loam, cemented substratum, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—10 percent
- Inclusion 2: Raglan silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-loamy, mixed, mesic—5 percent

### **Characteristics of the Relley Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass

### **Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

28 to 50 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

50 to 60 inches or more—strongly cemented duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 10.8 to 12.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—3; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave areas of fan skirts

*Contrasting features:* Very deep soil, lacks a duripan

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent slightly concave inset fans

*Contrasting features:* Calcareous throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Fair—thin layer, cemented pan

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell, thin layer

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated  
*Range site:* 024X002N

## **852—Relley silt loam, strongly saline**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,600 to 5,500 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Relley silt loam, strongly saline, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent
- Inclusion 2: Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### **Characteristics of the Relley Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—slightly convex to slightly concave  
*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Typical Profile**

- 0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 16 to 28 inches—silt loam; 0 to 5 percent pebbles (by

weight); massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave areas on fan skirts

*Contrasting features:* Moderately well drained, moderately saline

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent smooth inset fans

*Contrasting features:* Silt loam throughout the profile, nonsaline

*Distinctive present vegetation:* Winterfat, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—low strength, shrink-swell  
*Roadfill:* Fair—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X003

## **853—Relley silty clay loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,600 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*  
 • Relley silty clay loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—90 percent  
*Contrasting inclusions:*  
 • Inclusion 1: Antel silty clay loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—10 percent

### **Characteristics of the Relley Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—smooth to slightly convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—silty clay loam; 0 to 5 percent pebbles

(by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); strongly saline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave areas of fan skirts  
*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants

(nonirrigated)—poor; shrubs (nonirrigated)—poor;  
wetland plants—poor; shallow water areas—very  
poor

### **Ratings and Restrictive Features of the Relley Soil for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

## **855—Relley-Broyles association**

### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—60 percent
- Broyles very fine sandy loam, 0 to 2 percent slopes, frequently flooded—Duric Camborthids, coarse-loamy, mixed, mesic—30 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—8 percent
- Inclusion 2: Entic Durorthids, 0 to 2 percent slopes—Entic Durorthids, loamy, mixed, mesic, shallow—1 percent
- Inclusion 3: Typic Torriorthents, 0 to 4 percent slopes—Typic Torriorthents, coarse-loamy, mixed (calcareous), mesic—1 percent

### **Characteristics of the Relley Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, horsebrush, spiny hopsage, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

8 to 16 inches—silt loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

16 to 28 inches—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

28 to 60 inches or more—silt loam; 0 to 5 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 10.8 to 12.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Inset fans

*Parent material:* Loess capped, loamy, volcanic alluvium  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, winterfat, bud sagebrush

### Typical Profile

- 0 to 5 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4
- 5 to 14 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline to moderately saline (4 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4
- 14 to 60 inches or more—gravelly fine sandy loam; 30 to 45 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—frequent; duration—very brief; months—December through May  
*Permeability:* Moderately rapid  
*Available water capacity:* 5.9 to 7.7 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial flat remnants adjacent to lower margins of fan skirts  
*Contrasting features:* Calcareous throughout the profile  
*Distinctive present vegetation:* Shadscale, black greasewood

#### Inclusion 2

*Position on landscape:* Nonburied fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Shadscale

#### Inclusion 3

*Position on landscape:* Adjacent to channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, rabbitbrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland

#### Wildlife habitat elements:

*Suitability of the Relley soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings and Restrictive Features of the Relley Soil for Selected Uses and Practices

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Fair—low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

### Ratings and Restrictive Features of the Broyles Soil for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Fair—small stones

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* Relley soil—IIc, irrigated, and VIIc, nonirrigated; Broyles soil—IIIw, irrigated, and VIIw, nonirrigated

*Range site:* Relley soil—024X002N; Broyles soil—024X014N

## 861—Rixie silty clay loam, strongly saline

### Map Unit Setting

*Position on landscape:* Basin floors

*Elevation:* 4,500 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Rixie silty clay loam, strongly saline, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Prida silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Sonoma silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### Characteristics of the Rixie Soil

*Position on landscape:* Flood plains

*Parent material:* Kind—alluvium influenced by volcanic ash; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Inland saltgrass, alkali sacaton, seepweed

### Typical Profile

0 to 10 inches—silty clay loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.8); strongly saline (20 to 40 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL, ML; estimated AASHTO classification—A-7

10 to 60 inches or more—stratified silt loam to silty clay; massive; hard, firm; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through July—24 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Slow

*Available water capacity:* 10.2 to 11.4 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Alluvial flats adjacent to flood plains

*Contrasting features:* Rarely flooded

*Distinctive present vegetation:* Iodinebush, alkali sacaton

#### Inclusion 2

*Position on landscape:* Outer margins of flood plains

*Contrasting features:* Poorly drained

*Distinctive present vegetation:* Alkali sacaton, alkali cordgrass

#### Inclusion 3

*Position on landscape:* Alluvial flats

*Contrasting features:* Strongly sodium-affected surface layer

*Distinctive present vegetation:* Black greasewood, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—excess salt

*Daily cover for landfill:* Poor—excess salt, too clayey

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness, percs slowly

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X009N

## **862—Rixie silty clay loam, drained, strongly saline**

### **Map Unit Setting**

*Position on landscape:* Basin floors

*Elevation:* 4,400 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Rixie silty clay loam, drained, strongly saline, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Argenta very fine sandy loam, 0 to 2 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—4 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 4: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—3 percent

### **Characteristics of the Rixie Soil**

*Position on landscape:* Flood plains with entrenched channels

*Parent material:* Kind—alluvium influenced by volcanic ash; source—volcanic rock

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, basin wildrye, shadscale, inland saltgrass

### **Typical Profile**

0 to 10 inches—silty clay loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.8);

strongly saline (more than 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-7, A-6

10 to 60 inches or more—stratified silt loam to silty clay; massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—48 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* Rare

*Permeability:* Slow

*Available water capacity:* 10.2 to 11.4 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Fine sandy loam substratum

*Distinctive present vegetation:* Black greasewood

#### **Inclusion 2**

*Position on landscape:* Lowest areas on flood plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Sedge, alkali cordgrass

#### **Inclusion 3**

*Position on landscape:* Alluvial flats adjacent to flood plains

*Contrasting features:* Fine-silty throughout the profile; thin, light colored surface layer

*Distinctive present vegetation:* Alkali sacaton, basin wildrye

#### **Inclusion 4**

*Position on landscape:* Areas adjacent to stream channels

*Contrasting features:* Frequently flooded, sandy loam substratum

*Distinctive present vegetation:* Sedge, creeping wildrye

#### **Other inclusions of minor extent**

*Position on landscape:* Lower areas on flood plains

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Alkali sacaton, alkali bluegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Poor—excess salt, too clayey  
*Shallow excavations:* Moderate—wetness, too clayey  
*Local roads and streets:* Severe—low strength, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, too clayey  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt  
*Drainage:* Percs slowly, flooding, frost action  
*Irrigation:* Wetness, percs slowly, erodes easily  
*Terraces and diversions:* Erodes easily, percs slowly

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated  
*Range site:* 024X007N

## **863—Rixie-Rixie, sodic, complex**

### **Map Unit Setting**

*Position on landscape:* Flood plains  
*Elevation:* 4,400 to 4,800 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Rixie silty clay loam, 0 to 2 percent slopes—Aquic Durorthidic Haploxerolls, fine-loamy, mixed, mesic—50 percent
- Rixie silt loam, sodic, 0 to 2 percent slopes—Aquic Durorthidic Haploxerolls, fine-loamy, mixed, mesic—40 percent

#### **Contrasting inclusions:**

- Inclusion 1: Prida silt loam, 0 to 2 percent slopes—Aquic Durothidic Torriorthents, fine-silty, mixed (calcareous), mesic—10 percent

### **Characteristics of the Rixie Soil**

*Position on landscape:* Low-lying areas on flood plains

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Inland saltgrass, iodinebush

### **Typical Profile**

0 to 10 inches—silty clay loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL, CM; estimated AASHTO classification—A-7

10 to 60 inches or more—stratified silt loam to silty clay; massive; hard, firm; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—24 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Slow

*Available water capacity:* 10.2 to 11.4 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* High

### **Characteristics of the Rixie, Sodic, Soil**

*Position on landscape:* Undulating mounds on flood plains

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—short; slightly concave to slightly convex

*Dominant present vegetation:* Alkali sacaton, inland saltgrass, iodinebush

**Typical Profile**

0 to 15 inches—silt loam; subangular blocky structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (more than 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6

15 to 60 inches or more—stratified silt loam to silty clay; massive; hard, firm; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* February through July—24 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Slow

*Available water capacity:* 10.2 to 11.4 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Alluvial flats adjacent to flood plains

*Contrasting features:* Rarely flooded

*Distinctive present vegetation:* Iodinebush, alkali sacaton

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Wildlife habitat elements:**

*Suitability of the Rixie soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—fair; shallow water areas—good

*Suitability of the Rixie, sodic, soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs

(nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

**Ratings and Restrictive Features of the Rixie Soil for Selected Uses and Practices**

*Range seeding:* Poor—excess salt

*Daily cover for landfill:* Poor—excess salt, too clayey

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness, percs slowly

**Ratings and Restrictive Features of the Rixie, Sodic, Soil for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, too clayey

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness, percs slowly

**Interpretive Groups**

*Capability classification:* Rixie soil—IIIw, irrigated, and VIIw, nonirrigated; Rixie, sodic, soil—VIw, irrigated, and VIIw, nonirrigated

*Range site:* Rixie soil—024X009N; Rixie, sodic, soil—024X010N

**864—Rixie silty clay loam****Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Rixie silty clay loam, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### Characteristics of the Rixie Soil

*Position on landscape:* Flood plains

*Parent material:* Kind—alluvium influenced by volcanic ash; source—dominantly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Spikerush, sedge, bluegrass, creeping wildrye, inland saltgrass

### Typical Profile

- 0 to 10 inches—silty clay loam; angular blocky structure; hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL, ML; estimated AASHTO classification—A-7
- 10 to 43 inches—stratified silt loam to silty clay; massive; hard, firm; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7
- 43 to 60 inches or more—stratified very gravelly sand to fine sandy loam; 35 to 60 percent pebbles (by weight); massive and single grained; slightly hard, friable and loose; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through July—24 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* In the upper 43 inches—slow; below this depth—moderately rapid

*Available water capacity:* 8.0 to 9.5 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Lower parts of flood plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Creeping wildrye

#### Inclusion 2

*Position on landscape:* Slightly convex natural levees along channels

*Contrasting features:* Sandy loam profile

*Distinctive present vegetation:* Creeping wildrye

#### Inclusion 3

*Position on landscape:* Alluvial flats adjacent to channels

*Contrasting features:* Strongly salt and sodium affected

*Distinctive present vegetation:* Black greasewood, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Poor—too clayey

*Shallow excavations:* Severe—wetness, cutbanks cave

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Fair—wetness

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Moderate—thin layer, piping, wetness

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, perc slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness, perc slowly

### ***Interpretive Groups***

*Capability classification:* Ilw, irrigated, and Vlw, nonirrigated

*Range site:* 025X001N

## **870—Roca-Bregar-Linrose association**

### ***Map Unit Setting***

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,500 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 90 days

### ***Composition***

*Major components:*

- Roca very cobbly loam, 50 to 75 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—35 percent
- Bregar gravelly loam, 4 to 15 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—25 percent
- Linrose gravelly loam, 50 to 75 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Rubble land—6 percent
- Inclusion 2: Aridic Argixerolls, 50 to 75 percent slopes—5 percent
- Inclusion 3: Rock outcrop—3 percent
- Inclusion 4: Cumulic Haplaquolls, 2 to 8 percent slopes—Cumulic Haplaquolls, loamy-skeletal, mixed, frigid—1 percent

### ***Characteristics of the Roca Soil***

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—cherts and shales

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Bluebunch wheatgrass, big sagebrush, Thurber needlegrass

### ***Typical Profile***

0 to 5 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 15 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 27 inches—very gravelly clay loam, very gravelly

clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

### ***Soil and Water Features***

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### ***Characteristics of the Bregar Soil***

*Position on landscape:* Crests of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Idaho fescue, low sagebrush, black sagebrush

### ***Typical Profile***

0 to 4 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; slightly acid (pH 6.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4

4 to 11 inches—very gravelly clay loam, extremely gravelly loam, very cobbly sandy clay loam; 0 to 40 percent cobbles and stones and 65 to 80 percent pebbles (by weight); angular blocky structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

11 inches—unweathered bedrock

### ***Soil and Water Features***

*Depth to bedrock:* 5 to 12 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Medium

*Available water capacity:* 1.0 to 1.3 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Linrose Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—shale, chert, and quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, Idaho fescue, bluegrass

### **Typical Profile**

0 to 8 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, ML; estimated AASHTO classification—A-4

8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.2 to 3.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Rock screes on side slopes of mountains

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Concave, north-facing side slopes of mountains

*Contrasting features:* Deep to bedrock

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush

#### **Inclusion 3**

*Position on landscape:* Rimrock and scattered peaks of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 4**

*Position on landscape:* Narrow perennial drainageways of mountains

*Contrasting features:* Thick, dark colored surface layer, receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bregar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Roca Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Bregar Soil for Selected Uses**

*Range seeding:* Poor—droughty, depth to bedrock

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Linrose Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Roca soil—VIIIs, nonirrigated; Bregar soil—VIIIs, nonirrigated; Linrose soil—VIIe, nonirrigated

*Range site:* Roca soil—024X028N; Bregar soil—024X016N; Linrose soil—024X042N

### **872—Roca-Linrose-Wiskan association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,000 to 8,000 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 90 days

#### **Composition**

*Major components:*

- Roca very gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—35 percent
- Linrose very gravelly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—30 percent
- Wiskan very gravelly loam, 30 to 50 percent slopes—

Xerollic Haplargids, loamy-skeletal, mixed, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Glean gravelly silt loam, 30 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—6 percent

- Inclusion 2: Bucan gravelly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—2 percent

- Inclusion 3: Bregar extremely gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—2 percent

#### **Characteristics of the Roca Soil**

*Position on landscape:* South-facing, upper and mid side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—smooth to convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass

*Surface cover:* 45 percent pebbles

#### **Typical Profile**

0 to 5 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

5 to 27 inches—very gravelly clay loam, very gravelly clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Linrose Soil**

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—shales, cherts, and quartzite

*Dominant present vegetation:* Black sagebrush, Idaho fescue, bluegrass

### **Typical Profile**

0 to 8 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-4, A-1

8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.2 to 3.4 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Wiskan Soil**

*Position on landscape:* East- and west-facing side slopes of mountains

*Parent material:* Kind—thin loess mantle over colluvium and residuum; source—chert and other various kinds of rock

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, Sandberg bluegrass, Douglas rabbitbrush

### **Typical Profile**

0 to 16 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); granular; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-1, A-2, A-4

16 to 28 inches—very gravelly clay loam, very gravelly loam, extremely gravelly clay loam; 10 to 25 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.4 to 3.0 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, north-facing back slopes of mountains

*Contrasting features:* Receives additional soil moisture from drifted snow

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush, snowberry

#### **Inclusion 2**

*Position on landscape:* South-facing foot slopes of mountains

*Contrasting features:* Clay subsoil

*Distinctive present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

#### **Inclusion 3**

*Position on landscape:* Crests of mountains

*Contrasting features:* Bedrock within a depth of 20 inches

*Distinctive present vegetation:* Black sagebrush, low sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Wiskan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Roca Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Linrose Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Wiskan Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Roca soil—VIIIs, nonirrigated; Linrose soil—VIIIs, nonirrigated; Wiskan soil—VIIIs, nonirrigated

*Range site:* Roca soil—024X028N; Linrose soil—024X042N; Wiskan soil—024X031N

## **873—Roca-Reluctan association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,400 to 7,400 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Roca very cobbly loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—50 percent
  - Reluctan very cobbly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—35 percent
- Contrasting inclusions:*
- Inclusion 1: Xerollic Haplargids, 15 to 30 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—6 percent
  - Inclusion 2: Rock outcrop—4 percent
  - Inclusion 3: Welch clay loam, drained, 4 to 8 percent slopes—Cumulic Haplaquolls, fine-loamy, mixed, frigid—3 percent
  - Inclusion 4: Rubble land—2 percent

### **Characteristics of the Roca Soil**

*Position on landscape:* Predominantly south- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—smooth to concave

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass, basin wildrye

### **Typical Profile**

0 to 5 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 15 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 27 inches—very gravelly clay loam, very gravelly clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Reluctant Soil

*Position on landscape:* Predominantly north- and east-facing side slopes of mountains

*Parent material:* Kind—loamy residuum and colluvium; source—rhyolitic rocks

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass, Thurber needlegrass

### Typical Profile

0 to 13 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 40 to 55 percent pebbles (by weight); platy; slightly hard, friable; mildly alkaline (pH 7.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4, A-2

13 to 38 inches—gravelly clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

38 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.0 to 5.2 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Predominately north- and east-facing, concave foot slopes of mountains

*Contrasting features:* Deep to bedrock and has a clayey subsoil

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Shoulder slopes of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Concave, narrow drainageways of mountains

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Reluctant soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Roca Soil for Selected Uses

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Reluctant Soil for Selected Uses**

*Range seeding:* Poor—large stones  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—piping, large stones

#### **Interpretive Groups**

*Capability classification:* Roca soil—VIIIs, nonirrigated;  
 Reluctant soil—VIIIs, nonirrigated

*Range site:* Roca soil—024X028N; Reluctant soil—024X021N

### **875—Roca-Glean-Bregar association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,400 to 7,000 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 80 days

#### **Composition**

*Major components:*

- Roca very cobbly loam, 30 to 75 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—40 percent
- Glean gravelly silt loam, 30 to 75 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—25 percent
- Bregar extremely gravelly loam, 30 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—20 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—7 percent
- Inclusion 2: Lithic Haplargids, 30 to 50 percent slopes—Lithic Haplargids, loamy-skeletal, mixed, mesic—6 percent
- Inclusion 3: Rock outcrop—2 percent

#### **Characteristics of the Roca Soil**

*Position on landscape:* South-, west-, and east-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Bluebunch wheatgrass, mountain big sagebrush, Thurber needlegrass

#### **Typical Profile**

0 to 5 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 15 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 27 inches—very gravelly clay loam, very gravelly clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Glean Soil**

*Position on landscape:* North-facing back slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—various kinds of rock

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, bluegrass

#### **Typical Profile**

0 to 6 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2);

estimated Unified classification—SM, GM, ML;  
estimated AASHTO classification—A-4

6 to 49 inches—very gravelly loam, very gravelly sandy loam; 0 to 25 percent cobbles and stones and 40 to 75 percent pebbles (by weight); massive; soft, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
49 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.1 to 5.0 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Very rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—3; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Bregar Soil

*Position on landscape:* Crests and shoulder slopes of mountains  
*Parent material:* Kind—residuum; source—volcanic rock  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Low sagebrush, bluegrass, black sagebrush

### Typical Profile

0 to 4 inches—extremely gravelly loam; 10 to 20 percent cobbles and stones and 70 to 80 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2  
4 to 11 inches—very gravelly clay loam, very cobbly sandy clay loam, extremely gravelly sandy clay loam; 5 to 45 percent cobbles and stones and 65 to 75 percent pebbles (by weight); angular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2  
11 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 5 to 12 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.0 to 1.3 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Irregular to slightly concave, south-facing side slopes of mountains  
*Contrasting features:* Thick, dark colored surface layer and a layer of clay accumulation  
*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass

#### Inclusion 2

*Position on landscape:* Convex, north-facing shoulder slopes of mountains  
*Contrasting features:* Lower water-supplying capacity  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Steep, eroded side slopes and rimrock along south-facing shoulder slopes of mountains  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Glean soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bregar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Roca Soil for Selected Uses

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Glean Soil for Selected Uses**

*Range seeding:* Fair—droughty, small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope, seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Bregar Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, depth to bedrock

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Roca soil—VIIIs, nonirrigated; Glean soil—VIIe, nonirrigated; Bregar soil—VIIIs, nonirrigated

*Range site:* Roca soil—024X028N; Glean soil—024X023N; Bregar soil—024X016N

### **881—Rose Creek silt loam, drained, strongly saline**

#### **Map Unit Setting**

*Position on landscape:* Stream terraces

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Rose Creek silt loam, drained, strongly saline, 0 to 2 percent slopes—Fluvaquent Haploxerolls, coarse-loamy, mixed, mesic—85 percent

##### *Contrasting inclusions:*

- Inclusion 1: Rixie silty clay loam, drained, strongly saline, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—5 percent
- Inclusion 2: Sonoma silty clay loam, drained, strongly saline, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

#### **Characteristics of the Rose Creek Soil**

*Position on landscape:* Stream terraces

*Parent material:* Kind—colluvium; source—dominantly from volcanic rock

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, seepweed, inland saltgrass

#### **Typical Profile**

- 0 to 10 inches—silt loam; platy structure; hard, firm; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 60 inches or more—stratified very fine sandy loam to gravelly sand; 5 to 15 percent cobbles and stones and pebbles (by weight); platy structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* February through May—48 to 72 inches; rest of year—below 72 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly lower areas on stream terraces

*Contrasting features:* Stratified fine sandy loam to silty clay

*Distinctive present vegetation:* Black greasewood, inland saltgrass

#### **Inclusion 2**

*Position on landscape:* Small irregularly shaped areas on the outer margin of stream terraces

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Black greasewood, basin wildrye

#### **Inclusion 3**

*Position on landscape:* Alluvial flats along the margin of stream terraces

*Contrasting features:* Strongly sodium-affected surface layer

*Distinctive present vegetation:* Black greasewood, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—too sandy, excess salt

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X007N

## **882—Rose Creek silty clay loam**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Humboldt silty clay loam, moderately saline, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—5 percent
- Inclusion 2: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—2 percent

### **Characteristics of the Rose Creek Soil**

*Position on landscape:* Flood plains adjacent to stream channels

*Parent material:* Kind—alluvium; source—dominantly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Willow, spikerush, sedge, rush, creeping wildrye, inland saltgrass

### **Typical Profile**

0 to 10 inches—silty clay loam; platy structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

10 to 60 inches or more—stratified silt loam to gravelly sand; 5 to 30 percent cobbles and stones and pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4, A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—December through June  
*Permeability:* Moderately rapid  
*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Small, irregularly shaped depressional areas of flood plains  
*Contrasting features:* Clayey throughout the profile  
*Distinctive present vegetation:* Sedge

#### Inclusion 2

*Position on landscape:* Small, irregularly shaped slightly lower areas of flood plains  
*Contrasting features:* Silt loam throughout the profile  
*Distinctive present vegetation:* Sedge

#### Inclusion 3

*Position on landscape:* Along the outer margin of flood plains  
*Contrasting features:* Silt loam throughout the profile; a thin, light colored surface layer  
*Distinctive present vegetation:* Sedge

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Fair—excess salt  
*Daily cover for landfill:* Poor—too sandy  
*Shallow excavations:* Severe—cutbanks cave, wetness  
*Local roads and streets:* Severe—frost action, flooding  
*Roadfill:* Fair—wetness  
*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines  
*Topsoil:* Too sandy  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping, wetness  
*Drainage:* Flooding, frost action, cutbanks cave  
*Irrigation:* Wetness, erodes easily, flooding  
*Terraces and diversions:* Erodes easily, wetness, too sandy

### Interpretive Groups

*Capability classification:* IIIw, irrigated, and Vw, nonirrigated  
*Range site:* 025X001N

## 883—Rose Creek-Paranat silty clay loams

### Map Unit Setting

*Position on landscape:* Flood plains  
*Elevation:* 4,400 to 4,800 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—55 percent
  - Paranat silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—35 percent
- Contrasting inclusions:*
- Inclusion 1: Humboldt silty clay loam, moderately saline, 0 to 2 percent slopes—(Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—5 percent
  - Inclusion 2: Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### Characteristics of the Rose Creek Soil

*Position on landscape:* Adjacent to channels on flood plains  
*Parent material:* Kind—alluvium; source—dominantly volcanic rock  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Willow, spikerush, sedge, rush, creeping wildrye, saltgrass

### Typical Profile

0 to 10 inches—silty clay loam; platy structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated

Unified classification—CL; estimated AASHTO classification—A-6, A-7

10 to 60 inches or more—stratified silt loam to gravelly sand; 5 to 30 percent cobbles and stones and pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4, A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—February through June

*Permeability:* Moderately rapid

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### Characteristics of the Paranat Soil

*Position on landscape:* Depressional areas on flood plains

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Willow, spikerush, sedge, rush, creeping wildrye, inland saltgrass

### Typical Profile

0 to 20 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

20 to 48 inches—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-6, A-7

48 to 60 inches or more—stratified very fine sandy loam to silty clay; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated

Unified classification—ML; estimated AASHTO classification—A-4, A-6

### Soil and Water Features

*Depth to seasonal high water table:* November through June—18 to 42 inches; rest of year—below 42 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—December through June

*Permeability:* Moderately slow

*Available water capacity:* 11.5 to 13.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Backwater areas of flood plains

*Contrasting features:* Clayey throughout the profile

*Distinctive present vegetation:* Sedge

#### Inclusion 2

*Position on landscape:* Small irregularly shaped areas on the outer margin of flood plains

*Contrasting features:* Thin, light colored surface layer

*Distinctive present vegetation:* Sedge

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability of the Rose Creek soil for named elements:*

Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

*Suitability of the Paranat soil for named elements:* Grain

and seed crops (irrigated)—very poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### Ratings and Restrictive Features of the Rose Creek Soil for Selected Uses and Practices

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave, wetness  
*Local roads and streets:* Severe—frost action, flooding  
*Roadfill:* Fair—wetness  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—too sandy  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping, wetness  
*Drainage:* Flooding, frost action, cutbanks cave  
*Irrigation:* Wetness, erodes easily, flooding  
*Terraces and diversions:* Erodes easily, wetness, too sandy

### **Ratings and Restrictive Features of the Paranat Soil for Selected Uses and Practices**

*Range seeding:* Fair—excess salt  
*Daily cover for landfill:* Fair—too clayey, wetness  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—low strength, flooding, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—too clayey  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—piping, wetness  
*Drainage:* Flooding, frost action  
*Irrigation:* Wetness, erodes easily, flooding  
*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* Rose Creek soil—IIIw, irrigated, and Vw, nonirrigated; Paranat soil—Vw, irrigated, and Vw, nonirrigated  
*Range site:* Rose Creek soil—025X001N; Paranat soil—025X001N

## **891—Rosney loam, cemented substratum**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats  
*Elevation:* 4,500 to 4,800 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*  
 • Rosney loam, cemented substratum, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—90 percent

### **Contrasting inclusions:**

- Inclusion 1: Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Bubus very fine sand, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—2 percent

### **Characteristics of the Rosney Soil**

*Position on landscape:* Alluvial flat remnants  
*Parent material:* Loess capped mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, shadscale, seepweed, basin wildrye, inland saltgrass

### **Typical Profile**

0 to 9 inches—loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL-ML, CL; estimated AASHTO classification—A-4  
 9 to 50 inches—silty clay loam, silt loam; massive; slightly hard, friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 50 to 60 inches or more—strongly cemented duripan

### **Soil and Water Features**

*Depth to hardpan:* 50 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 10.0 to 11.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Stream terraces adjacent to alluvial flats

*Contrasting features:* Somewhat poorly drained  
*Distinctive present vegetation:* Black greasewood

#### **Inclusion 2**

*Position on landscape:* Lower areas of alluvial flat remnants

*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Shadscale, bud sagebrush, black greasewood

#### **Inclusion 3**

*Position on landscape:* Slightly higher areas of alluvial flat remnants

*Contrasting features:* Fine sandy loam throughout the profile

*Distinctive present vegetation:* Shadscale, black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native hayland and pasture

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—cemented pan, thin layer

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—cemented pan

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Deep to water

*Irrigation:* Excess salt, excess sodium, erodes easily

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X003N

## **892—Rosney silt loam**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,500 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Rosney silt loam, 0 to 2 percent slopes—Typic Torriorthents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—5 percent

- Inclusion 3: Yipor silt loam, moderately saline-sodic, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Rosney Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Thin loess mantle capping silty mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, seepweed, saltbush, shadscale, inland saltgrass

### **Typical Profile**

0 to 7 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

7 to 25 inches—silt loam; massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL-ML, A-4; estimated AASHTO classification—A-4

25 to 60 inches or more—stratified silt loam to silty clay; massive; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (40 to 60 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 10.2 to 11.4 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.64; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower areas of alluvial flat remnants

*Contrasting features:* Moderately well drained  
*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Alluvial flats  
*Contrasting features:* Clayey substratum  
*Distinctive present vegetation:* Saltbush, alkali sacaton, black greasewood

#### **Inclusion 3**

*Position on landscape:* Lower margins of fan skirts adjacent to alluvial flats  
*Contrasting features:* Silt loam throughout the profile  
*Distinctive present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess sodium, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X012N

## **970—Soolake very fine sandy loam, 0 to 2 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,400 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—2 percent

### **Characteristics of the Soolake Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, bud sagebrush

### **Typical Profile**

0 to 13 inches—very fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified

classification—ML; estimated AASHTO classification—A-4

- 13 to 22 inches—fine sandy loam, very fine sandy loam; massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4
- 22 to 60 inches or more—stratified loamy fine sand to sand; 5 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 5.4 to 7.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity to steel:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper parts of fan skirts  
*Contrasting features:* Nonsaline surface layer, loamy throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Lower alluvial flat remnants adjacent to fan skirts  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 3

*Position on landscape:* Higher alluvial flat remnants adjacent to fan skirts  
*Contrasting features:* Loamy throughout the profile  
*Distinctive present vegetation:* Black greasewood, shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium  
*Daily cover for landfill:* Poor—too sandy  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—too sandy, excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—piping, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Droughty  
*Terraces and diversions:* Erodes easily, too sandy

### Interpretive Groups

*Capability classification:* IIIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X003N

## 971—Soolake very fine sandy loam, 2 to 8 percent slopes

### Map Unit Setting

*Position on landscape:* Fan skirts  
*Elevation:* 4,400 to 4,700 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Soolake very fine sandy loam, 2 to 8 percent slopes—Typic Torriorthents, sandy, mixed, mesic—90 percent
- Contrasting inclusions:*
  - Inclusion 1: Blacka very fine sandy loam, 2 to 4 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—10 percent

### Characteristics of the Soolake Soil

*Position on landscape:* Fan skirts  
*Parent material:* Mixed alluvium  
*Slope features:* Length—long; shape—smooth

**Typical Profile**

- 0 to 13 inches—very fine sandy loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 13 to 22 inches—fine sandy loam, very fine sandy loam; massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4
- 22 to 60 inches or more—stratified loamy fine sand to sand; 5 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

**Soil and Water Features**

- Depth to seasonal high water table:* More than 60 inches
- Frequency of flooding:* None
- Permeability:* Moderately rapid
- Available water capacity:* 5.4 to 7.0 inches
- Water-supplying capacity:* 7 inches
- Runoff:* Very slow
- Hydrologic group:* B
- Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3
- Hazard of erosion:* By water—slight; by wind—slight
- Shrink-swell potential:* Low
- Corrosivity:* To steel—high; to concrete—moderate
- Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

- Position on landscape:* Adjacent fan piedmont remnants
- Contrasting features:* Strongly cemented duripan at a depth of 20 to 40 inches
- Distinctive present vegetation:* Shadscale, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

- Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features of the Soolake Soil for Selected Uses and Practices**

- Range seeding:* Poor—too arid, excess salt, excess sodium
- Daily cover for landfill:* Poor—too sandy
- Shallow excavations:* Severe—cutbanks cave
- Local roads and streets:* Slight
- Roadfill:* Good
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—too sandy, excess salt
- Pond reservoir areas:* Severe—seepage
- Embankments, dikes, and levees:* Severe—piping, excess salt
- Drainage:* Deep to water
- Irrigation:* Droughty, slope
- Terraces and diversions:* Erodes easily, too sandy

**Interpretive Groups**

- Capability classification:* IIIe, irrigated, and VIIs, nonirrigated
- Range site:* 024X003N

**972—Soolake-Dunphy-Argenta association****Map Unit Setting**

- Position on landscape:* Basin floor
- Elevation:* 4,400 to 4,700 feet
- Average annual precipitation:* About 7 inches
- Average annual air temperature:* About 49 degrees F
- Frost-free season:* About 110 days

**Composition****Major components:**

- Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—40 percent
- Dunphy very fine sandy loam, 0 to 2 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—30 percent
- Argenta fine sandy loam, 0 to 2 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—20 percent

**Contrasting inclusions:**

- Inclusion 1: Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—5 percent

**Characteristics of the Soolake Soil**

- Position on landscape:* Fan skirts near margins of alluvial flat remnants
- Parent material:* Mixed alluvium
- Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, bud sagebrush

### Typical Profile

- 0 to 13 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 13 to 22 inches—fine sandy loam, very fine sandy loam; massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4
- 22 to 60 inches or more—stratified loamy fine sand to sand; 5 to 15 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 5.4 to 7.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Characteristics of the Dunphy Soil

*Position on landscape:* Alluvial flat remnants  
*Parent material:* Mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, basin wildrye, inland saltgrass

### Typical Profile

- 0 to 6 inches—very fine sandy loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 50 to 65); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 6 to 54 inches—very fine sandy loam, fine sandy loam; massive; slightly hard, very friable; very strongly

alkaline (pH 9.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

54 to 60 inches or more—strongly cemented duripan; massive; very hard, very firm

### Soil and Water Features

*Depth to hardpan:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 5.7 to 6.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—3; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Characteristics of the Argenta Soil

*Position on landscape:* Alluvial flats  
*Parent material:* Kind—alluvium; source—volcanic rock  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Black greasewood, basin wildrye, inland saltgrass

### Typical Profile

- 0 to 7 inches—fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 50 to 65); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4
- 7 to 45 inches—stratified fine sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—gravelly sandy loam; 35 to 45 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* February through July—32 to 40 inches; rest of year—below 40 inches  
*Frequency of flooding:* Rare

*Permeability:* Moderate  
*Available water capacity:* 6.5 to 9.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Channeled areas of alluvial flats  
*Contrasting features:* Frequently flooded  
*Distinctive present vegetation:* Black greasewood, basin wildrye, alkali sacaton

#### **Inclusion 2**

*Position on landscape:* Sand dunes overplacing alluvial flats  
*Contrasting features:* Sandy throughout the profile  
*Distinctive present vegetation:* Basin big sagebrush, needleandthread

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Soolake soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Dunphy soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Argenta soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Soolake Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—too sandy, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, piping

#### **Ratings of the Dunphy Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Fair—thin layer

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### **Ratings of the Argenta Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—wetness

*Local roads and streets:* Severe—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, excess sodium, excess salt

### **Interpretive Groups**

*Capability classification:* Soolake soil—IIIs, irrigated, and VIIs, nonirrigated; Dunphy soil—VIIs, nonirrigated; Argenta soil—VIw, irrigated, and VIIw, nonirrigated

*Range site:* Soolake soil—024X003N; Dunphy soil—024X011N; Argenta soil—024X011N

## **980—Sombrero very fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Basin floor

*Elevation:* 4,400 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Sombrero very fine sandy loam, 0 to 2 percent slopes—Aquentic Durorthids, loamy, mixed, mesic, shallow—90 percent

#### **Contrasting inclusions:**

- Inclusion 1: Duffer very fine sandy loam, 0 to 2 percent slopes—Aquic Calciorthids, fine-silty, carbonatic, mesic—4 percent

- Inclusion 2: Reese silt loam, 0 to 2 percent slopes—

Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—3 percent

- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—3 percent

### **Characteristics of the Sombrero Soil**

*Position on landscape:* Stream terraces

*Parent material:* Loess capped, loamy mixed alluvium influenced by volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, littleleaf horsebrush, rubber rabbitbrush, basin wildrye

### **Typical Profile**

- 0 to 4 inches—very fine sandy loam; prismatic structure; slightly hard, very friable; very strongly alkaline (pH 9.2); strongly saline (30 to 50 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 4 to 16 inches—silt loam, silty clay loam; platy structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (30 to 40 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 16 to 42 inches—strongly cemented duripan; massive; very hard, very firm
- 42 to 60 inches or more—stratified loam to gravelly sand; 10 to 45 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 9.0); moderately to strongly saline (8 to 20 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—SM, ML, GM; estimated AASHTO classification—A-2, A-4

### **Soil and Water Features**

*Depth to hardpan:* 15 to 20 inches

*Depth to seasonal high water table:* March through June—36 to 60 inches; rest of year—below 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.9 to 3.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Very deep

*Distinctive present vegetation:* Iodinebush

#### **Inclusion 2**

*Position on landscape:* Smooth flood plains

*Contrasting features:* Lacks duripan

*Distinctive present vegetation:* Black greasewood

#### **Inclusion 3**

*Position on landscape:* Alluvial flats

*Contrasting features:* Very deep

*Distinctive present vegetation:* Black greasewood, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, excess salt

*Pond reservoir areas:* Severe—seepage, cemented pan

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Cemented pan, erodes easily, excess salt

*Terraces and diversions:* Cemented pan, erodes easily, too sandy

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X007N

### **990—Sonoma silt loam, drained**

#### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,500 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Sonoma silt loam, drained, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Sonoma silt loam, slightly saline, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—9 percent
- Inclusion 2: Fluvaquentic Haplaquolls, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—6 percent

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Channeled and gullied flood plain remnants

*Parent material:* Silty mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Basin big sagebrush, rubber rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—silt loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—CL; estimated AASHTO classification—A-6

8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Flood plains and backwater channels

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Basin wildrye, black greasewood, basin big sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth to concave, active flood plains near channels

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Fair—too clayey

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—too clayey

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Moderate—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 025X003N

### **991—Sonoma silt loam, drained, slightly saline**

#### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,900 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Sonoma silt loam, drained, slightly saline, 0 to 2 percent slopes—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—85 percent

#### **Contrasting inclusions:**

- Inclusion 1: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—10 percent
- Inclusion 2: Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—3 percent
- Inclusion 3: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—2 percent

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Channeled and gullied flood plain remnants

*Parent material:* Silty mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Basin wildrye, inland saltgrass

### **Typical Profile**

0 to 8 inches—silt loam; subangular blocky structure; hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 15 to 30); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Small, irregularly shaped slightly lower areas on active flood plains

*Contrasting features:* Thick, dark colored surface layer, poorly drained

*Distinctive present vegetation:* Sedge

#### **Inclusion 2**

*Position on landscape:* Fanlettes from adjacent fan piedmonts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Bud sagebrush, black greasewood, rabbitbrush

#### **Inclusion 3**

*Position on landscape:* Alluvial flats adjacent to flood plains

*Contrasting features:* Somewhat poorly drained

*Distinctive present vegetation:* Basin wildrye, black greasewood, alkali sacaton

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—fair; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X007N

## 992—Sonoma silt loam, strongly saline, rarely flooded

### Map Unit Setting

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,900 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Sonoma silt loam, strongly saline, 0 to 2 percent slopes, rarely flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 2: Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—3 percent
- Inclusion 3: Rixie silty clay loam, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—2 percent
- Inclusion 4: Wendane silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—2 percent

### Characteristics of the Sonoma Soil

*Position on landscape:* Flood plains

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, pepperweed, inland saltgrass, basin wildrye

### Typical Profile

0 to 8 inches—silt loam; subangular blocky structure; hard, friable; very strongly alkaline (pH 9.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Small, irregularly shaped slightly lower areas of flood plains

*Contrasting features:* Frequently flooded, poorly drained

*Distinctive present vegetation:* Basin wildrye, creeping wildrye, willows

#### Inclusion 2

*Position on landscape:* Fanlettes from adjacent fan piedmonts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 3

*Position on landscape:* Lower areas of flood plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Sedge

#### Inclusion 4

*Position on landscape:* Adjacent alluvial flats

*Contrasting features:* Somewhat poorly drained

*Distinctive present vegetation:* Black greasewood, basin wildrye, rubber rabbitbrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X007N

## **993—Sonoma silty clay loam, frequently flooded**

### **Map Unit Setting**

*Position on landscape:* Flood plains  
*Elevation:* 4,400 to 4,900 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Sonoma silty clay loam, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Humboldt silty clay, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine, montmorillonitic (calcareous), mesic—5 percent
- Inclusion 2: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Rose Creek silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haploxerolls, coarse-loamy, mixed, mesic—5 percent

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Flood plains  
*Parent material:* Silty mixed alluvium influenced by volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Basin wildrye, inland saltgrass

### **Typical Profile**

0 to 8 inches—silty clay loam; subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.2); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 8); estimated Unified

classification—CL; estimated AASHTO classification—A-6, A-7

8 to 65 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—December through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave channels and depressions of flood plains  
*Contrasting features:* Thick, dark colored surface layer, clayey throughout profile  
*Distinctive present vegetation:* Basin wildrye, creeping wildrye

#### **Inclusion 2**

*Position on landscape:* Small, irregularly shaped slightly lower areas on flood plains  
*Contrasting features:* Thick, dark colored surface layer  
*Distinctive present vegetation:* Basin wildrye, creeping wildrye

#### **Inclusion 3**

*Position on landscape:* Small irregularly shaped areas adjacent to flood plain channels  
*Contrasting features:* Thick, dark colored surface layer; sandy loam throughout the profile  
*Distinctive present vegetation:* Basin wildrye, creeping wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops

(irrigated)—fair; domestic grasses and legumes  
 (irrigated)—fair; wild herbaceous plants  
 (nonirrigated)—poor; shrubs (nonirrigated)—poor;  
 wetland plants—good; shallow water areas—fair

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt  
*Daily cover for landfill:* Fair—too clayey, wetness  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—low strength, flooding, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—excess salt, too clayey  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—wetness  
*Drainage:* Flooding, percs slowly, frost action  
*Irrigation:* Wetness, erodes easily  
*Terraces and diversions:* Wetness, erodes easily

#### **Interpretive Groups**

*Capability classification:* IIIw, irrigated, and VIw, nonirrigated  
*Range site:* 025X001N

### **994—Sonoma silty clay loam, drained, strongly saline, occasionally flooded**

#### **Map Unit Setting**

*Position on landscape:* Flood plains  
*Elevation:* 4,400 to 4,900 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

##### **Major components:**

- Sonoma silty clay loam, drained, strongly saline, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—85 percent

##### **Contrasting inclusions:**

- Inclusion 1: Prida silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent
- Inclusion 2: Soolake very fine sandy loam, 0 to 2 percent slopes—Typic Torriorthents, sandy, mixed, mesic—4 percent
- Inclusion 3: Rixie silty clay loam, strongly saline, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—4 percent
- Inclusion 4: Wendane silt loam, 0 to 2 percent

slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—3 percent

#### **Characteristics of the Sonoma Soil**

*Position on landscape:* Channeled and gullied flood plain remnants

*Parent material:* Silty mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, basin wildrye

#### **Typical Profile**

0 to 8 inches—silty clay loam; subangular blocky structure; hard, friable; very strongly alkaline (pH 9.4); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7  
 8 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

#### **Soil and Water Features**

*Depth to seasonal high water table:* December through May—42 to 60 inches; rest of year—below 60 inches

*Flooding:* Frequency—occasional; duration—brief; months—March through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Alluvial flat remnants adjacent to flood plains

*Contrasting features:* Weakly silica-cemented layer in the substratum

*Distinctive present vegetation:* Iodinebush, alkali sacaton

##### **Inclusion 2**

*Position on landscape:* Fanlettes from adjacent fan piedmonts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 3**

*Position on landscape:* Depressional areas on flood plains

*Contrasting features:* Thick, dark colored surface layer

*Distinctive present vegetation:* Alkali cordgrass, sedge

#### **Inclusion 4**

*Position on landscape:* Alluvial flats adjacent to flood plains

*Contrasting features:* Somewhat poorly drained

*Distinctive present vegetation:* Black greasewood, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—good

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt, flooding

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X007N

### **995—Sonoma silty clay loam, strongly saline, occasionally flooded**

#### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,400 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### **Major components:**

- Sonoma silty clay loam, strongly saline, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—90 percent

#### **Contrasting inclusions:**

- Inclusion 1: Parana silty clay loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—5 percent
- Inclusion 2: Prida silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Rixie silty clay loam, strongly saline, 0 to 2 percent slopes—Aquic Duric Haploxerolls, fine-loamy, mixed, mesic—2 percent

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Flood plains

*Parent material:* Silty mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Alkali sacaton, inland saltgrass, basin wildrye, iodinebush

### **Typical Profile**

0 to 8 inches—silty clay loam; subangular blocky structure; hard, friable; strongly alkaline (pH 9.0); strongly saline (25 to 50 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

8 to 60 inches or more—silty clay loam, silt loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Small, irregularly shaped slightly lower areas on flood plains

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Sedge

#### **Inclusion 2**

*Position on landscape:* Alluvial flat remnants adjacent to flood plains

*Contrasting features:* Rarely flooded

*Distinctive present vegetation:* Iodinebush, alkali sacaton

#### **Inclusion 3**

*Position on landscape:* Slightly higher areas on flood plains

*Contrasting features:* Weakly silica-cemented strata in the subsoil

*Distinctive present vegetation:* Sedge, alkali cordgrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, wetness

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, perc slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X009N

## **996—Sonoma, strongly saline-Sonoma complex**

### **Map Unit Setting**

*Position on landscape:* Basin floors

*Elevation:* 5,600 to 5,700 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Sonoma silty clay loam, strongly saline, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—60 percent
- Sonoma silty clay, slightly saline, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—30 percent

*Contrasting inclusions:*

- Inclusion 1: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty over clayey, mixed (calcareous), mesic—5 percent
- Inclusion 2: Ocala silt loam, 0 to 2 percent slopes, rarely flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Sonoma, Strongly Saline, Soil**

*Position on landscape:* Irregularly shaped basin floor remnants at a distance from springs and seeps

*Parent material:* Silty mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, basin wildrye

### **Typical Profile**

0 to 12 inches—silty clay loam; subangular blocky structure; slightly hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 50 to 80); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

12 to 60 inches or more—silty clay loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

## Soil and Water Features

*Depth to seasonal high water table:* 18 to 36 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

## Characteristics of the Sonoma Soil

*Position on landscape:* Basin floor remnants close to springs and seeps  
*Parent material:* Silty mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Inland saltgrass, sedge, alkali sacaton

## Typical Profile

0 to 12 inches—silty clay; angular blocky structure; hard, friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—MH; estimated AASHTO classification—A-7  
 12 to 60 inches or more—stratified silty clay loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

## Soil and Water Features

*Depth to seasonal high water table:* 18 to 36 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

## Contrasting Inclusions

### Inclusion 1

*Position on landscape:* Irregularly shaped, lower lake plain terraces  
*Contrasting features:* Clayey substratum  
*Distinctive present vegetation:* Black greasewood, basin wildrye

### Inclusion 2

*Position on landscape:* Coppice dune areas on low lake plain terraces  
*Contrasting features:* Water table fluctuates to below 40 inches in summer and fall  
*Distinctive present vegetation:* Black greasewood

## Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland, irrigated cropland

## Wildlife habitat elements:

*Suitability of the Sonoma, strongly saline, soil for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Sonoma soil for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—fair

## Ratings and Restrictive Features of the Sonoma, Strongly Saline, Soil for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Fair—wetness, too clayey  
*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—low strength, flooding, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—excess salt, wetness  
*Drainage:* Percs slowly, flooding, frost action  
*Irrigation:* Wetness, perc slowly, erodes easily  
*Terraces and diversions:* Erodes easily, wetness

## Ratings and Restrictive Features of the Sonoma Soil for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Fair—wetness, too clayey

*Shallow excavations:* Severe—wetness  
*Local roads and streets:* Severe—low strength, flooding, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—excess salt, too clayey  
*Pond reservoir areas:* Slight  
*Embankments, dikes, and levees:* Severe—wetness  
*Drainage:* Percs slowly, flooding, frost action  
*Irrigation:* Wetness, slow intake, erodes easily  
*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* Sonoma, strongly saline, soil—Vlw, irrigated, and VIIw, nonirrigated; Sonoma soil—IIIw, irrigated, and VIw, nonirrigated  
*Range site:* Sonoma, strongly saline, soil—024X007N; Sonoma soil—024X009N

## **997—Sonoma silty clay loam, strongly saline, frequently flooded**

### **Map Unit Setting**

*Position on landscape:* Basin floor remnants  
*Elevation:* 5,600 to 5,700 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 47 degrees F  
*Frost-free season:* About 100 days

### **Composition**

#### **Major components:**

- Sonoma silty clay loam, strongly saline, 0 to 2 percent slopes, frequently flooded—Aeric Fluvaquents, fine-silty mixed (calcareous), mesic—90 percent

#### **Contrasting inclusions:**

- Inclusion 1: Gund silt loam, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty over clayey, mixed, nonacid, mesic—5 percent
- Inclusion 2: Ocala silt loam, 0 to 2 percent slopes, rarely flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Basin floor remnants near springs and seeps  
*Parent material:* Silty mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Basin wildrye, alkali sacaton, black greasewood

### **Typical Profile**

0 to 8 inches—silty clay loam; platy structure; slightly hard, friable; strongly alkaline (pH 9.0); strongly

saline (25 to 50 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 8 to 60 inches or more—silty clay loam, silt loam; massive; hard, friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through June—18 to 36 inches; rest of year—below 36 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Higher lake plain terraces  
*Contrasting features:* Clayey substratum  
*Distinctive present vegetation:* Basin wildrye, basin big sagebrush, black greasewood

#### **Inclusion 2**

*Position on landscape:* Lower lake plain terraces  
*Contrasting features:* Ponds after high intensity rains  
*Distinctive present vegetation:* Black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium  
*Daily cover for landfill:* Fair—too clayey, wetness

*Shallow excavations:* Severe—wetness

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, wetness

*Drainage:* Percs slowly, flooding, frost action

*Irrigation:* Wetness, percs slowly, erodes easily

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X007N

## **1021—Susie Creek-Millerlux association**

### **Map Unit Setting**

*Position on landscape:* Plateaus

*Elevation:* 5,500 to 6,500 feet

*Average annual precipitation:* About 11 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 75 days

### **Composition**

*Major components:*

- Susie Creek silt loam, 2 to 8 percent slopes—Durargidic Argixerolls, fine, montmorillonitic, frigid—60 percent

- Millerlux very cobbly loam, 8 to 15 percent slopes—Lithic Xerollic Haplargids, clayey, montmorillonitic, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls, 8 to 15 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—9 percent

- Inclusion 2: Rock outcrop—3 percent

- Inclusion 3: Chen extremely cobbly loam, 4 to 8 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—3 percent

### **Characteristics of the Susie Creek Soil**

*Position on landscape:* Summits of plateaus

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—basalt and andesite

*Slope features:* Length—long; shape—slightly concave to slightly convex

*Dominant present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, basin wildrye, bottlebrush squirreltail

### **Typical Profile**

0 to 9 inches—silt loam; 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

9 to 27 inches—silty clay, clay, clay loam; 5 to 15 percent pebbles (by weight); subangular blocky structure; hard, firm; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH, CL; estimated AASHTO classification—A-7

27 to 42 inches—sandy loam, loam; 5 to 25 percent pebbles (by weight); massive; hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

42 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 27 inches—slow; below this depth—moderate

*Available water capacity:* 6.2 to 7.9 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—3; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Millerlux Soil**

*Position on landscape:* Side slopes of plateaus

*Parent material:* Kind—residuum influenced by volcanic ash; source—basalt and tuffs

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Low sagebrush, bottlebrush squirreltail, Thurber needlegrass, bluebunch wheatgrass

*Surface cover:* 40 percent cobbles

### **Typical Profile**

0 to 10 inches—very cobbly loam; 25 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm);

nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-6, A-4

10 to 15 inches—clay; 0 to 10 percent cobbles and stones and 0 to 15 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH; estimated AASHTO classification—A-7

15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 12 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 2.0 to 2.4 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave side slopes of hills adjacent to plateaus  
*Contrasting features:* Bedrock at a depth of 60 to 80 inches  
*Distinctive present vegetation:* Wyoming big sagebrush, basin wildrye

#### Inclusion 2

*Position on landscape:* Rimrock along shoulder slopes of plateaus  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Higher crests of foothills adjacent to plateaus  
*Contrasting features:* Bedrock at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Low sagebrush, Idaho fescue

### Wildlife habitat elements:

*Suitability of the Susie Creek soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Millerlux soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Susie Creek Soil for Selected Uses

*Range seeding:* Fair—droughty, too arid  
*Daily cover for landfill:* Poor—too clayey, hard to pack  
*Shallow excavations:* Moderate—depth to bedrock, too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Poor—low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—too clayey  
*Pond reservoir areas:* Moderate—seepage, depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Millerlux Soil for Selected Uses

*Range seeding:* Poor—droughty, large stones  
*Daily cover for landfill:* Poor—depth to bedrock, hard to pack  
*Shallow excavations:* Severe—depth to bedrock  
*Local roads and streets:* Severe—depth to bedrock, low strength, shrink-swell  
*Roadfill:* Poor—depth to bedrock, low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Susie Creek soil—VIs, nonirrigated; Millerlux soil—VIIs, nonirrigated  
*Range site:* Susie Creek soil—024X014N; Millerlux soil—024X018N

## 1031—Teman silt loam

### Map Unit Setting

*Position on landscape:* Inset fans and fan skirts  
*Elevation:* 4,500 to 4,700 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

*Major components:*  
 • Teman silt loam, 0 to 2 percent slopes—Durixerollic Calciorthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—4 percent
- Inclusion 2: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—4 percent
- Inclusion 3: Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—4 percent
- Inclusion 4: Yipor silt loam, saline-sodic, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty, mixed (calcareous), mesic—3 percent

**Characteristics of the Teman Soil**

*Position on landscape:* Fan skirts and inset fans

*Parent material:* Kind—silty alluvium high in pyroclastic materials; source—mostly volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, black greasewood, rubber rabbitbrush, basin wildrye

**Typical Profile**

0 to 8 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

8 to 63 inches or more—silt loam, silty clay loam; massive; hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Upper areas on fan skirts

*Contrasting features:* Coarse-silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Sand sheets overplacing parts of fan skirts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Basin big sagebrush, Indian ricegrass

**Inclusion 3**

*Position on landscape:* Adjacent alluvial flats remnants

*Contrasting features:* Clayey substratum

*Distinctive present vegetation:* Saltbush, alkali sacaton

**Inclusion 4**

*Position on landscape:* Lower margins of fan skirts adjacent to alluvial flat remnants

*Contrasting features:* Well drained; saline-sodic surface layer

*Distinctive present vegetation:* Black greasewood, shadscale

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X006N

**1032—Teman silt loam, clayey substratum****Map Unit Setting**

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 4,500 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Teman silt loam, clayey substratum, 0 to 2 percent slopes—Durixerollic Calciorthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Goldrun fine sand, 0 to 4 percent slopes—Xeric Torripsamments, mixed, mesic—10 percent
- Inclusion 2: Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—3 percent
- Inclusion 3: Duffer very fine sandy loam, 0 to 2 percent slopes—Aquic Calciorthids, fine-silty, carbonatic, mesic—2 percent

**Characteristics of the Teman Soil**

*Position on landscape:* Fan skirts and inset fans

*Parent material:* Kind—silty alluvium high in pyroclastic materials; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, mustards, basin wildrye

**Typical Profile**

0 to 8 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.9); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

8 to 40 inches—silt loam, silty clay loam; massive; hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

40 to 60 inches or more—silty clay; massive; hard, friable; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—MH; estimated AASHTO classification—A-7

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Sand sheets and dunes overplacing fan skirts

*Contrasting features:* Sandy throughout the profile

*Distinctive present vegetation:* Basin big sagebrush, Indian ricegrass

**Inclusion 2**

*Position on landscape:* Alluvial flat remnants adjacent to fan skirts

*Contrasting features:* Clayey substratum at a depth of 20 to 40 inches

*Distinctive present vegetation:* Saltbush

**Inclusion 3**

*Position on landscape:* Adjacent alluvial flats

*Contrasting features:* Seasonal high water table in spring months

*Distinctive present vegetation:* Iodinebush, alkali sacaton

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Fair—thin layer

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Percs slowly, erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X006N

## **1033—Teman silt loam, strongly saline**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 4,200 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Teman silt loam, strongly saline, 0 to 2 percent slopes—Durixerollic Calciorthids, fine-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durothidic Torriorthents, fine-silty, mixed (calcareous), mesic—10 percent
- Inclusion 2: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—3 percent
- Inclusion 3: Landco silt loam, 0 to 2 percent slopes—Typic Torriorthents, coarse-silty over clayey, mixed (calcareous), mesic—2 percent

### **Characteristics of the Teman Soil**

*Position on landscape:* Fan skirts

*Parent material:* Kind—silty alluvium high in pyroclastics; source—volcanic rock

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, inland saltgrass, basin wildrye

### **Typical Profile**

- 0 to 8 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6
- 8 to 63 inches or more—silt loam, silty clay loam; massive; hard, friable; strongly alkaline (pH 8.8); strongly saline (16 to 25 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML; estimated AASHTO classification—A-4, A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Alluvial flat remnants adjacent to fan skirts

*Contrasting features:* Lacks layer of lime accumulation

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 2**

*Position on landscape:* Upper parts of fan skirts

*Contrasting features:* Surface layer not saline-sodic

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Alluvial flat remnants adjacent to lower margins of fan skirts

*Contrasting features:* Clayey substratum

*Distinctive present vegetation:* Saltbush, alkali sacaton

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—very poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—piping, excess salt

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* VIs, irrigated, and VIIs, nonirrigated

*Range site:* 024X006N

## **1040—Tenabo, gravelly-Allor-Tenabo association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,700 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Tenabo gravelly very fine sandy loam, 8 to 15 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—40 percent

- Allor very cobbly loam, 15 to 30 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—25 percent

- Tenabo very cobbly loam, 4 to 15 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Haplargids, 15 to 30 percent slopes—Typic Haplargids, fine, montmorillonitic, mesic—8 percent

- Inclusion 2: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—7 percent

### **Characteristics of the Tenabo, Gravelly, Soil**

*Position on landscape:* South-facing side slopes of fan piedmont remnants

*Parent material:* Thin loess mantle influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, spiny hopsage, Indian ricegrass

### **Typical Profile**

0 to 6 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2

6 to 18 inches—clay loam, gravelly clay loam, silty clay loam; 10 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

18 to 40 inches—indurated duripan; massive; extremely hard, extremely firm

40 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; very strongly alkaline (pH 9.2); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 15 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.2 to 3.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Allor Soil**

*Position on landscape:* North-facing side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bluegrass

### **Typical Profile**

0 to 12 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 30 to 55 percent pebbles

(by weight); subangular blocky structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-2, A-4

12 to 34 inches—gravelly clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); angular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-6, A-7

34 to 60 inches or more—gravelly loamy sand, very gravelly loamy sand; 0 to 10 percent cobbles and stones and 35 to 55 percent pebbles (by weight); massive; very hard, firm; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.7 to 6.0 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Tenabo Soil**

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Thin loess mantle influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, spiny hopsage, bud sagebrush, bluegrass

#### **Typical Profile**

0 to 6 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 18 inches—clay loam, sandy clay loam; 5 to 15 percent pebbles (by weight); prismatic structure;

slightly hard, friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6

18 to 40 inches—indurated duripan; massive; extremely hard, extremely firm

40 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 10 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; very strongly alkaline (pH 9.2); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to hardpan:* 15 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.3 to 2.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Convex, north-facing side slopes of fan piedmont remnants

*Contrasting features:* Clayey subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

##### **Inclusion 2**

*Position on landscape:* Inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, pine bluegrass

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

##### **Wildlife habitat elements:**

*Suitability of the Tenabo, gravelly, soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Allor soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Tenabo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Tenabo, Gravelly, Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones, area reclaim

*Pond reservoir areas:* Severe—cemented pan, seepage, slope

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Allor Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—cutbanks cave, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Fair—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Tenabo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, seepage, slope

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Tenabo, gravelly, soil—IVe, irrigated, and VIIs, nonirrigated; Allor soil—VIIs, nonirrigated; Tenabo soil—VIIs, nonirrigated

*Range site:* Tenabo, gravelly, soil—024X002N; Allor soil—024X005N; Tenabo soil—024X002N

### **1041—Tenabo-Ricert association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,800 to 6,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Tenabo silt loam, 0 to 4 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—60 percent
- Ricert gravelly silt loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Whirlo gravelly loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 2: Durorthidic Torriorthents, 4 to 8 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 3: Creemon silt loam, 2 to 4 percent slope—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

#### **Characteristics of the Tenabo Soil**

*Position on landscape:* Higher summits of fan piedmont remnants

*Parent material:* Thin loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush

#### **Typical Profile**

0 to 13 inches—silt loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 20 inches—clay loam, gravelly clay loam, silty clay loam; 5 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

20 to 39 inches—indurated duripan; massive; extremely hard, extremely firm

39 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 35 to 65 percent pebbles (by weight); single grained; loose; very

strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 9 to 20 inches  
*Depth to seasonal high water table:* More than 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.8 to 4.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Characteristics of the Ricert Soil

*Position on landscape:* Lower summits of fan piedmont remnants  
*Parent material:* Thin loess deposits over mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush

### Typical Profile

0 to 6 inches—gravelly silt loam; 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4  
 6 to 18 inches—loam, clay loam; 0 to 15 percent pebbles (by weight); prismatic structure; slightly hard, friable; strongly alkaline (pH 8.5); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7  
 18 to 60 inches or more—very gravelly sandy loam, very gravelly loamy sand, extremely gravelly loamy sand; 0 to 15 percent cobbles and stones and 50 to 80 percent pebbles (by weight); massive; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* In the upper 18 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 4.4 to 6.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fan aprons overlaping fan piedmont remnants  
*Contrasting features:* Very gravelly throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Inset fans  
*Contrasting features:* Lacks layer of clay accumulation  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Adjacent fan skirts  
*Contrasting features:* Silty throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, homesites

#### Wildlife habitat elements:

*Suitability of the Tenabo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Ricert soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Tenabo Soil for Selected Uses

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, seepage  
*Embankments, dikes, and levees:* Severe—excess sodium, excess salt, seepage

#### **Ratings of the Ricert Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Interpretive Groups**

*Capability classification:* Tenabo soil—IVe, irrigated, and VIIs, nonirrigated; Ricert soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Tenabo soil—024X002N; Ricert soil—024X002N

### **1042—Tenabo very gravelly loam, 2 to 8 percent slopes**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,400 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Tenabo very gravelly loam, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—85 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids, 15 to 30 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 2: Golconda very gravelly silt loam, 2 to 8 percent slopes—Haplic Nadurargids, fine-loamy, mixed, mesic—5 percent
- Inclusion 3: Doowak very loamy sand, 2 to 4 percent slopes—Xeric Torriorthents, sandy-skeletal, mixed, mesic—3 percent
- Inclusion 4: Cumulic Haploxerolls, 0 to 4 percent

slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, mesic—2 percent

#### **Characteristics of the Tenabo Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Thin loess mantle high in volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Bud sagebrush, shadscale, bottlebrush squirreltail

#### **Typical Profile**

- 0 to 6 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1
- 6 to 18 inches—clay loam, gravelly clay loam, silty clay loam; 10 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 18 to 40 inches—indurated duripan; massive; extremely hard, extremely firm
- 40 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to hardpan:* 15 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.2 to 3.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Side slopes of fan piedmont remnants

*Contrasting features:* Very deep soil that lacks a duripan

*Distinctive present vegetation:* Big sagebrush, Thurber needlegrass

#### Inclusion 2

*Position on landscape:* Lower summits of fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Inset fans

*Contrasting features:* Very deep soil that receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 4

*Position on landscape:* Adjacent to channels of inset fans, near the mountain front

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings for Selected Uses

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones, area reclaim

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—excess sodium, seepage, excess salt

### Interpretive Groups

*Capability classification:* IVe, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

### 1062—Tomera-Snapp-Whirlo association

#### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,600 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### Composition

##### Major components:

- Tomera gravelly loam, 8 to 15 percent slopes—Xerollic Natrargids, fine, montmorillonitic, mesic—50 percent
- Snapp gravelly very fine sandy loam, 4 to 8 percent slopes—Durixerollic Natrargids, clayey over sandy or sandy-skeletal, montmorillonitic, mesic—20 percent
- Whirlo gravelly sandy loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—15 percent

##### Contrasting inclusions:

- Inclusion 1: Aridic Haploxerolls, 4 to 8 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, mesic—10 percent
- Inclusion 2: Xeric Torriorthents, 4 to 8 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

#### Characteristics of the Tomera Soil

*Position on landscape:* Upper fan piedmont remnants

*Parent material:* Kind—alluvium high in pyroclastic materials; source—mixed sedimentary rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass

#### Typical Profile

0 to 8 inches—gravelly loam; 25 to 50 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, GM, SM-SC, GM-GC; estimated AASHTO classification—A-2, A-4

8 to 33 inches—gravelly sandy clay, gravelly clay; 25 to 45 percent pebbles (by weight); prismatic structure; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 15 to 30); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7

33 to 60 inches or more—extremely gravelly sandy loam, very gravelly loamy sand, very cobbly loam; 1 to 40 percent cobbles and stones and 55 to 70 percent pebbles (by weight); massive; soft, very

friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic to moderately sodic (SAR 13 to 30); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 33 inches—slow; below this depth—moderately rapid  
*Available water capacity:* 5.6 to 7.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Moderate

### Characteristics of the Snapp Soil

*Position on landscape:* Lower fan piedmont remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass  
*Surface cover:* 45 percent pebbles

### Typical Profile

0 to 10 inches—gravelly very fine sandy loam; 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2  
 10 to 30 inches—clay, gravelly clay, gravelly clay loam; 10 to 50 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 9.0); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GC, CH; estimated AASHTO classification—A-7  
 30 to 60 inches or more—extremely gravelly loamy sand, very gravelly loamy sand; 50 to 85 percent pebbles (by weight); massive; hard, brittle; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM, SP-SM, GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* In the upper 30 inches—slow; below this depth—moderate  
*Available water capacity:* 5.2 to 7.1 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Moderate

### Characteristics of the Whirlo Soil

*Position on landscape:* Inset fans  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush

### Typical Profile

0 to 7 inches—gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4  
 7 to 13 inches—gravelly sandy loam, gravelly loam, fine sandy loam; 0 to 10 percent cobbles and stones and 15 to 45 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4  
 13 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 5 to 30 percent cobbles and stones and 50 to 75 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.9 to 5.3 inches  
*Water-supplying capacity:* 6 inches  
*Runoff:* Slow  
*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Fan aprons on the upper parts of fan piedmont remnants  
*Contrasting features:* Very stony, thick, dark colored surface layer  
*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Upper part of inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Tomera soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Snapp soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Tomera Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—hard to pack

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—shrink-swell, low strength

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—too clayey, small stones, area reclaim

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Ratings of the Snapp Soil for Selected Uses**

*Range seeding:* Poor—excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Tomera soil—VIs, nonirrigated;

Snapp soil—IIIe, irrigated, and VIs, nonirrigated;

Whirlo soil—IIIe, irrigated, and VIIc, nonirrigated

*Range site:* Tomera soil—024X005N; Snapp soil—024X005N; Whirlo soil—024X002N

## **1080—Trunk-Burrita association**

### **Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 4,800 to 5,600 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Trunk very cobbly loam, 30 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—60 percent

- Burrita very cobbly loam, 4 to 15 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Natrargids, 15 to 30 percent slopes—Typic Natrargids, fine, montmorillonitic, mesic—5 percent

- Inclusion 2: Rock outcrop—5 percent

- Inclusion 3: Xerollic Haplargids, 4 to 8 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Trunk Soil**

*Position on landscape:* Side slopes of foothills

*Parent material:* Kind—colluvium over residuum;  
source—metasedimentary rocks

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush,  
small rabbitbrush, Indian ricegrass, pine bluegrass

### Typical Profile

0 to 5 inches—very cobbly loam; 30 to 45 percent  
cobbles and stones and 25 to 50 percent pebbles  
(by weight); granular structure; slightly hard, friable;  
mildly alkaline (pH 7.6); nonsaline (less than 2  
mmhos/cm); nonsodic (SAR less than 2); estimated  
Unified classification—SC, GC, SM-SC, GM-GC;  
estimated AASHTO classification—A-4, A-6

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to  
10 percent cobbles and stones and 20 to 50  
percent pebbles (by weight); prismatic structure;  
hard, firm; moderately alkaline (pH 8.2); nonsaline  
(less than 2 mmhos/cm); nonsodic (SAR less than  
2); estimated Unified classification—CL, GC, CH;  
estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—  
2; wind erodibility group—8

*Hazard of erosion:* By water—Moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Burríta Soil

*Position on landscape:* Crest and shoulder slopes of  
foothills

*Parent material:* Kind—residuum; source—metamorphic  
rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush,  
small rabbitbrush, pine bluegrass, Indian ricegrass,  
spiny hopsage

### Typical Profile

0 to 3 inches—very cobbly loam; 25 to 40 percent  
cobbles and stones and 35 to 45 percent pebbles  
(by weight); platy structure; slightly hard, very  
friable; moderately alkaline (pH 8.0); nonsaline (less

than 2 mmhos/cm); nonsodic (SAR less than 2);  
estimated Unified classification—GM-GC; estimated  
AASHTO classification—A-4

3 to 18 inches—very cobbly clay, very stony clay loam,  
very gravelly clay loam; 10 to 55 percent cobbles  
and stones and 45 to 70 percent pebbles (by  
weight); angular blocky structure; hard, firm;  
moderately alkaline (pH 8.2); nonsaline (less than 2  
mmhos/cm); nonsodic (SAR less than 2); estimated  
Unified classification—GC, SC; estimated AASHTO  
classification—A-2, A-7

18 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.0 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—  
1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave foot slopes of  
foothills

*Contrasting features:* 40 to 60 inches deep to bedrock

*Distinctive present vegetation:* Shadscale, bud  
sagebrush

#### Inclusion 2

*Position on landscape:* Scattered peaks of foothills

*Contrasting features:* Bedrock exposed at the soil  
surface

*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Toe slopes of foothills

*Contrasting features:* Receives additional moisture from  
runoff

*Distinctive present vegetation:* Wyoming big sagebrush,  
spiny hopsage

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Trunk soil for named elements:* Wild  
herbaceous plants (nonirrigated)—fair; shrubs  
(nonirrigated)—fair

*Suitability of the Burrita soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Trunk Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Burrita Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Interpretive Groups**

*Capability classification:* Trunk soil—VIIIs, nonirrigated; Burrita soil—VIIIs, nonirrigated

*Range site:* Trunk soil—024X005N; Burrita soil—024X005N

### **1082—Trunk-Reina association**

#### **Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,000 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Trunk loam, 8 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—50 percent
- Reina loam, 4 to 15 percent slopes—Xerollic Durargids, clayey-skeletal, montmorillonitic, mesic, shallow—35 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—10 percent
- Inclusion 2: Rubble land—5 percent

#### **Characteristics of the Trunk Soil**

*Position on landscape:* Lower side slopes of foothills

*Parent material:* Kind—residuum and colluvium;

source—sedimentary and metasedimentary rocks

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, rabbitbrush, bottlebrush squirreltail, Sandberg bluegrass

#### **Typical Profile**

0 to 5 inches—loam; 0 to 20 percent pebbles (by weight); granular structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Reina Soil**

*Position on landscape:* Upper side slopes of foothills

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—andesite, basalt, tuff, and quartzite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush,

rabbitbrush, bluebunch wheatgrass, Thurber  
needlegrass

*Surface cover:* 15 percent pebbles

### Typical Profile

0 to 7 inches—loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

7 to 18 inches—very gravelly clay, very gravelly clay loam; 10 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); prismatic structure; very hard, firm; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM; estimated AASHTO classification—A-2, A-7

18 to 26 inches—indurated duripan; massive; very hard, firm

26 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 14 to 20 inches

*Depth to bedrock:* 22 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.0 to 2.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Rimrock and exposed bedrock on severely eroded side slopes of foothills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Rock stringers below rock outcrop

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Reina soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Trunk Soil for Selected Uses

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Reina Soil for Selected Uses

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—cemented pan, depth to bedrock

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Trunk soil—VIIe, nonirrigated; Reina soil—VIIs, nonirrigated

*Range site:* Trunk soil—024X005N; Reina soil—024X005N

### 1084—Trunk-Burrita-Rock outcrop association

#### Map Unit Setting

*Position on landscape:* Foothills

*Elevation:* 4,800 to 5,600 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Trunk cobbly loam, 30 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—40 percent
- Burrita very cobbly loam, 4 to 15 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—25 percent
- Rock outcrop—20 percent

#### Contrasting inclusions:

- Inclusion 1: Xerollic Haplargids, 4 to 15 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—5 percent
- Inclusion 2: Xerollic Durargids, 15 to 30 percent slopes—Xerollic Durargids, clayey-skeletal, montmorillonitic, mesic—5 percent
- Inclusion 3: Xeric Torriorthents, 15 to 30 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—4 percent
- Inclusion 4: Typic Torriorthents, 30 to 50 percent slopes—Typic Torriorthents, clayey-skeletal, montmorillonitic (calcareous), mesic—1 percent

### Characteristics of the Trunk Soil

*Position on landscape:* Side slopes of foothills

*Parent material:* Kind—colluvium and residuum;  
source—metasedimentary rocks

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush,  
small rabbitbrush, Indian ricegrass, pine bluegrass

#### Typical Profile

0 to 5 inches—cobbly loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); very gravelly; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

#### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Burrita Soil

*Position on landscape:* Crests and shoulder slopes of foothills

*Parent material:* Kind—residuum; source—metamorphic rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush,  
small rabbitbrush, pine bluegrass, Indian ricegrass,  
spiny hopsage

#### Typical Profile

0 to 3 inches—very cobbly loam; 25 to 40 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4

3 to 18 inches—very cobbly clay, very stony clay loam, very gravelly clay loam; 10 to 55 percent cobbles and stones and 45 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-7

18 inches—unweathered bedrock

#### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.5 to 2.0 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Rock Outcrop**

*Position on landscape:* Rimrock and eroded side slopes of foothills

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Convex upper crests of foothills

*Contrasting features:* Abrupt textural boundary

*Distinctive present vegetation:* Low sagebrush, bluegrass, Thurber needlegrass

#### **Inclusion 2**

*Position on landscape:* Concave to slightly convex foot slopes of foothills

*Contrasting features:* A duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Wyoming big sagebrush, pine bluegrass

#### **Inclusion 3**

*Position on landscape:* Side slopes of drainageway

*Contrasting features:* Soil is more than 40 inches deep

*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

#### **Inclusion 4**

*Position on landscape:* Eroded side slopes of foothills

*Contrasting features:* Surface layer eroded

*Distinctive present vegetation:* Wyoming big sagebrush, shadscale

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Burrita soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Trunk Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Burrita Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Trunk soil—VIIIs, nonirrigated;

Burrita soil—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Trunk soil—024X005N; Burrita soil—024X005N

## **1085—Trunk-Dewar-Stingdorn association**

### **Map Unit Setting**

*Position on landscape:* Foothills and interhill fan piedmont remnants

*Elevation:* 5,500 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Trunk gravelly loam, 15 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—35 percent
- Dewar very cobbly loam, 15 to 50 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—30 percent

- Stingdorn very cobbly loam, 8 to 15 percent slopes—Typic Durargids, loamy-skeletal, mixed, mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Abruptic Xerollic Durargids, 15 to 30 percent slopes—Abruptic Xerollic Durargids, fine, montmorillonitic, mesic—6 percent

- Inclusion 2: Xerollic Durorthids, 8 to 30 percent slopes—Xerollic Durorthids, loamy-skeletal, mixed, mesic, shallow—5 percent

- Inclusion 3: Veta very gravelly fine sandy loam, 4 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—3 percent

- Inclusion 4: Rock outcrop—1 percent

### **Characteristics of the Trunk Soil**

*Position on landscape:* North- and east-facing crests and side slopes of foothills

*Parent material:* Kind—residuum and colluvium;  
source—various sedimentary rocks

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush,  
Indian ricegrass, bottlebrush squirreltail

*Surface cover:* 15 percent pebbles, 10 percent cobbles

### Typical Profile

0 to 5 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); granular structure; slightly hard; friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GC, SM-SC, GM, SM; estimated AASHTO classification—A-4

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—moderate

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Dewar Soil

*Position on landscape:* Interhill fan piedmont remnants

*Parent material:* Silty mixed alluvium

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass, bottlebrush squirreltail

### Typical Profile

0 to 4 inches—very cobbly loam; 40 to 50 percent cobbles and stones and 20 to 35 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than

2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

4 to 14 inches—cobbly silty clay loam; 25 to 30 percent cobbles and stones and 10 to 20 percent pebbles (by weight); subangular blocky structure; slightly hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

14 to 19 inches—very cobbly silty loam; 30 to 40 percent cobbles and stones and 45 to 55 percent pebbles (by weight); subangular blocky structure; slightly hard, firm; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6

19 to 32 inches—indurated duripan; massive; extremely hard, extremely firm

32 to 60 inches or more—gravelly sandy loam; 40 to 50 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 13 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.0 to 2.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Stingdorn Soil

*Position on landscape:* South- and west-facing summits and shoulder slopes of foothills

*Parent material:* Kind—residuum; source—rhyolitic bedrock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 7 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 30 to 45 percent pebbles

(by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SC; estimated AASHTO classification—A-2, A-4

- 7 to 15 inches—very cobbly loam, clay loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GC; estimated AASHTO classification—A-6
- 15 to 20 inches—indurated duripan; massive; extremely hard, extremely firm
- 20 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 8 to 20 inches  
*Depth to bedrock:* 8 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.5 to 1.9 inches  
*Water-supplying capacity:* 6 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—moderate  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Highest part of interhill fan piedmont remnants  
*Contrasting features:* Abrupt textural boundary at top of clayey subsoil  
*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

#### Inclusion 2

*Position on landscape:* Lower south-facing side slopes of foothills  
*Contrasting features:* Very gravelly sandy loam subsoil  
*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

#### Inclusion 3

*Position on landscape:* Adjacent to drainageways and channels of foothills and fan piedmont remnants  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 4

*Position on landscape:* Scattered peaks of foothills  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Dewar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Stingdorn soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings of the Trunk Soil for Selected Uses

*Range seeding:* Poor—erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—low strength, shrink-swell, slope  
*Roadfill:* Poor—depth to bedrock, low strength, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Dewar Soil for Selected Uses

*Range seeding:* Poor—large stones, droughty  
*Daily cover for landfill:* Poor—cemented pan, slope  
*Shallow excavations:* Severe—cemented pan, slope  
*Local roads and streets:* Severe—cemented pan, slope  
*Roadfill:* Poor—cemented pan  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, cemented pan, slope  
*Pond reservoir areas:* Severe—seepage, cemented pan, slope  
*Embankments, dikes, and levees:* Severe—seepage

#### Ratings of the Stingdorn Soil for Selected Uses

*Range seeding:* Poor—too arid, droughty, large stones  
*Daily cover for landfill:* Poor—depth to bedrock, large stones  
*Shallow excavations:* Severe—depth to bedrock, cemented pan  
*Local roads and streets:* Severe—depth to bedrock  
*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, depth to bedrock, large stones

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Trunk soil—VIIe, nonirrigated; Dewar soil—VIIs, nonirrigated; Stingdorn soil—VIIs, nonirrigated

*Range site:* Trunk soil—024X005N; Dewar soil—024X005N; Stingdorn soil—024X002N

## **1086—Trunk-Malpais-Minat association**

### **Map Unit Setting**

*Position on landscape:* Hills

*Elevation:* 5,500 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 100 days

### **Composition**

*Major components:*

- Trunk cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—45 percent
- Malpais gravelly loam, 30 to 50 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—25 percent
- Minat gravelly loam, 30 to 50 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Oxcorel very fine sandy loam, 4 to 15 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—7 percent
- Inclusion 2: Puett very gravelly loam, 30 to 50 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—6 percent
- Inclusion 3: Durixerollic Haplargids, 8 to 15 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—2 percent

### **Characteristics of the Trunk Soil**

*Position on landscape:* Crest and shoulder slopes of hills

*Parent material:* Kind—colluvium over residuum; source—various sedimentary rocks

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, bluegrass, Indian ricegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—cobbly loam; 15 to 30 percent cobbles

and stones and 10 to 30 percent pebbles (by weight); granular structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, CL-ML; estimated AASHTO classification—A-4

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 3.0 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Malpais Soil**

*Position on landscape:* South- and west-facing side slopes of hills

*Parent material:* Kind—colluvium influenced by loess and volcanic ash; source—basalt and andesite

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, shadscale

*Surface cover:* 15 percent pebbles, 10 percent cobbles and stones

### **Typical Profile**

0 to 3 inches—gravelly loam; 5 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-4

3 to 15 inches—very gravelly loam, very cobbly sandy loam, very gravelly sandy loam; 5 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly

hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

15 to 60 inches or more—stratified extremely cobbly loam to extremely cobbly sandy loam; 40 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.6 to 5.4 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Minat Soil**

*Position on landscape:* North- and east-facing side slopes of hills  
*Parent material:* Kind—colluvium influenced by volcanic ash; source—chert, shale, and volcanic rock  
*Slope features:* Length—long; shape—slightly concave to convex  
*Dominant present vegetation:* Wyoming big sagebrush, bluegrass, Indian ricegrass, phlox, ephedra, small rabbitbrush

### **Typical Profile**

0 to 9 inches—gravelly loam; 5 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-4, A-6  
 9 to 27 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

27 to 60 inches or more—very gravelly fine sandy loam, very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 5.8 to 7.0 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth and slightly convex fan piedmont remnants adjacent to hills  
*Contrasting features:* Clayey, sodium-affected subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Slightly concave to convex back slopes of severely eroded parts of hills  
*Contrasting features:* Soft bedrock within a depth of 20 inches  
*Distinctive present vegetation:* Small rabbitbrush, black sagebrush

#### **Inclusion 3**

*Position on landscape:* Concave to smooth foot slopes adjacent to drainageways  
*Contrasting features:* Very gravelly clay loam subsoil  
*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass, bluegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Malpais soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Minat soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Trunk Soil for Selected Uses**

*Range seeding:* Fair—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Malpais Soil for Selected Uses**

*Range seeding:* Poor—too arid, erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Minat Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Slight

#### **Interpretive Groups**

*Capability classification:* Trunk soil—VII, nonirrigated; Malpais soil—VIIe, nonirrigated; Minat soil—VIIe, nonirrigated

*Range site:* Trunk soil—024X005N; Malpais soil—024X026N; Minat soil—024X005N

### **1087—Trunk-Burrita-Colbar association**

#### **Map Unit Setting**

*Position on landscape:* Low hills

*Elevation:* 5,400 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Trunk very cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—45 percent

- Burrita very cobbly loam, 8 to 15 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—25 percent

- Colbar very cobbly loam, 15 to 50 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—15 percent

##### *Contrasting inclusions:*

- Inclusion 1: Duric Natrargids, 15 to 30 percent slopes—Duric Natrargids, loamy-skeletal, mixed, mesic—5 percent

- Inclusion 2: Lithic Xerollic Haplargids, 8 to 30 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—5 percent

- Inclusion 3: Xerollic Haplargids, 4 to 15 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—3 percent

- Inclusion 4: Rock outcrop—2 percent

#### **Characteristics of the Trunk Soil**

*Position on landscape:* East-, west-, and south-facing side slopes of low hills

*Parent material:* Kind—residuum and colluvium; source—metasedimentary rocks

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail, Sandberg bluegrass

#### **Typical Profile**

0 to 5 inches—very cobbly loam; 30 to 45 percent cobbles and stones and 25 to 50 percent pebbles (by weight); granular structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC, SC, GC; estimated AASHTO classification—A-4, A-6

5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7

28 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Very slow  
*Available water capacity:* 2.9 to 3.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Characteristics of the Burrita Soil**

*Position on landscape:* Crest and shoulder slopes of low hills  
*Parent material:* Kind—residuum; source—metamorphic rocks  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail

**Typical Profile**

0 to 3 inches—very cobbly loam; 25 to 40 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4  
 3 to 18 inches—very cobbly clay, very stony clay loam, very gravelly clay loam; 10 to 55 percent cobbles and stones and 45 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-7  
 18 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.5 to 2.0 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Characteristics of the Colbar Soil**

*Position on landscape:* North-facing side slopes of low hills  
*Parent material:* Kind—residuum and colluvium; source—andesite and dacite  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail, pine bluegrass

**Typical Profile**

0 to 3 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4  
 3 to 22 inches—cobbly loam, gravelly clay loam, cobbly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 22 to 26 inches—gravelly loam, cobbly loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4  
 26 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.3 to 3.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth, lower, south-facing side slopes of low hills

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Convex, north-facing crests and shoulder slopes of low hills

*Contrasting features:* Calcareous subsoil

*Distinctive present vegetation:* Black sagebrush, small rabbitbrush

#### **Inclusion 3**

*Position on landscape:* Concave side slopes adjacent to incipient drainageways

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 4**

*Position on landscape:* Occurs randomly as small peaks

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Burrita soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Trunk Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Poor—depth to bedrock, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Burrita Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Colbar Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, slope, large stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope, large stones

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Trunk soil—VIIIs, nonirrigated; Burrita soil—VIIIs, nonirrigated; Colbar soil—VIIIs, nonirrigated

*Range site:* Trunk soil—024X005N; Burrita soil—024X005N; Colbar soil—024X005N

## **1091—Tulase silt loam, 2 to 8 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 5,600 to 5,900 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

### **Composition**

*Major components:*

- Tulase silt loam, 2 to 8 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 2 to 8 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—10 percent

- Inclusion 2: Xeric Torriorthents, 2 to 8 percent slopes—Xeric Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Tulase Soil**

*Position on landscape:* Slightly dissected fan skirts

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

6 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.0 to 12.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent inset fans

*Contrasting features:* Fine sandy loam layers in the substratum

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silty clay loam throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* IIIe, irrigated, and VIc, nonirrigated

*Range site:* 025X019N

## **1092—Tulase-Bubus-McConnel association**

### **Map Unit Setting**

*Position on landscape:* Basin floor and piedmont slopes

*Elevation:* 5,000 to 5,800 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

### **Composition**

*Major components:*

- Tulase silt loam, 2 to 8 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—40 percent
  - Bubus very fine sandy loam, slightly saline, 2 to 4 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—30 percent
  - McConnel loam, 0 to 4 percent slopes—Xerollic Camborthids, sandy-skeletal, mixed, mesic—15 percent
- Contrasting inclusions:*

- Inclusion 1: Duric Camborthids, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 2: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—5 percent
- Inclusion 3: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Tulase Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—slightly concave to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass, bottlebrush squirreltail, small rabbitbrush

### Typical Profile

0 to 6 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

6 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.0 to 12.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Bubus Soil

*Position on landscape:* Alluvial flat remnants

*Parent material:* Mixed alluvium high in pyroclastics

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 6 inches—very fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 60 inches or more—stratified sandy loam to silt loam; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); strongly saline (more than 16 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified

classification—ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 9.0 to 10.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Characteristics of the McConnel Soil

*Position on landscape:* Offshore bars

*Parent material:* Mixed alluvium influenced by loess and volcanic ash over lacustrine beach sediments

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, Indian ricegrass, small rabbitbrush, pine bluegrass

*Surface cover:* 20 percent pebbles

### Typical Profile

0 to 2 inches—loam; 5 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

2 to 12 inches—loam, sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.9); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

12 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 0 to 15 percent cobbles and stones and 65 to 90 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 12 inches—moderately rapid; below this depth—very rapid  
*Available water capacity:* 3.1 to 4.4 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.37; T value—2; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth inset fans dissecting beach plains  
*Contrasting features:* Layer of weak silica accumulation  
*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 2**

*Position on landscape:* Concave inset fans dissecting beach plains  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Smooth to slightly convex remnants of offshore bars  
*Contrasting features:* Loamy and very gravelly throughout the profile  
*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### **Wildlife habitat elements:**

*Suitability of the Tulase soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bubus soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the McConnel soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Tulase Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Bubus Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### **Ratings of the McConnel Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—too arid, area reclaim, small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Tulase soil—IIIe, irrigated, and VIc, nonirrigated; Bubus soil—IIc, irrigated, and VIIc, nonirrigated; McConnel soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Tulase soil—024X005N; Bubus soil—024X002N; McConnel soil—024X005N

## **1102—Tweba very fine sandy loam, drained, 0 to 4 percent slopes**

### **Map Unit Setting**

*Position on landscape:* Flood plains

*Elevation:* 4,800 to 5,100 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Tweba very fine sandy loam, drained, 0 to 4 percent

slopes—Aeric Fluvaquents, coarse-loamy, mixed (calcareous), mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Orovida fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 2: Wendane silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

**Characteristics of the Tweba Soil**

*Position on landscape:* Channeled and gullied flood plain remnants

*Parent material:* Loamy mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Basin big sagebrush, black greasewood, basin wildrye, rubber rabbitbrush

**Typical Profile**

- 0 to 11 inches—very fine sandy loam; platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4
- 11 to 21 inches—fine sandy loam, very fine sandy loam, loam; massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 21 to 60 inches or more—stratified very fine sandy loam to loamy sand; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

**Soil and Water Features**

*Depth to seasonal high water table:* February through June—36 to 42 inches; rest of year—below 42 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 5.6 to 9.2 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

**Contrasting Inclusions**

**Inclusion 1**

*Position on landscape:* Fanlettes from adjacent fan piedmont remnants

*Contrasting features:* Well drained

*Distinctive present vegetation:* Wyoming big sagebrush

**Inclusion 2**

*Position on landscape:* Adjacent alluvial flats

*Contrasting features:* Strongly salt and sodium affected

*Distinctive present vegetation:* Black greasewood, halogeton

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland, irrigated cropland

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—fair; domestic grasses and legumes (irrigated)—fair; wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—good; shallow water areas—good

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Fair—too sandy, wetness

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding, frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily

*Terraces and diversions:* Erodes easily, too sandy

**Interpretive Groups**

*Capability classification:* Illw, irrigated, and Vlw, nonirrigated

*Range site:* 024X006N

**1110—Umlerland silty clay loam, ponded**

**Map Unit Setting**

*Position on landscape:* Lake plains

*Elevation:* About 5,100 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Umberland silty clay loam, ponded, 0 to 2 percent slopes—Aeric Halaquepts, fine, montmorillonitic (calcareous), mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Playas—10 percent
- Inclusion 2: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, fine-silty, mixed, mesic—5 percent

### Characteristics of the Umberland Soil

*Position on landscape:* Lake plains

*Parent material:* Silty mixed lacustrine sediments

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Inland saltgrass

### Typical Profile

- 0 to 4 inches—silty clay loam; platy structure; hard, friable; strongly alkaline (pH 9.2); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 30 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-7
- 4 to 60 inches or more—silty clay, silty clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

### Soil and Water Features

*Depth to seasonal high water table:* June through December—12 to 30 inches; rest of year—below 30 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 9.0 to 12.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Ponded

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Sink areas on lake plains

*Contrasting features:* Ponded too long to support vegetation

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Fanlettes from adjacent fan piedmont remnants

*Contrasting features:* Well drained

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, inland saltgrass, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

#### Ratings for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium, too crusty

*Daily cover for landfill:* Poor—too clayey, hard to pack, ponding

*Shallow excavations:* Severe—ponding

*Local roads and streets:* Severe—low strength, shrink-swell, ponding

*Roadfill:* Poor—low strength, wetness, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, too clayey, wetness

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—ponding, excess sodium, excess salt

### Interpretive Groups

*Capability classification:* VIIw, nonirrigated

*Range site:* 026X002N

## 1140—Wendane silt loam, frequently flooded

### Map Unit Setting

*Position on landscape:* Alluvial flats

*Elevation:* 4,600 to 5,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—85 percent

#### Contrasting inclusions:

- Inclusion 1: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 3: Sonoma silty clay loam, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—5 percent

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, basin wildrye, alkali rabbitbrush, inland saltgrass

### **Typical Profile**

- 0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 27 to 65 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth adjacent fan skirts

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 2**

*Position on landscape:* Slightly higher alluvial flats

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Black greasewood

#### **Inclusion 3**

*Position on landscape:* Adjacent flood plain remnants

*Contrasting features:* Occasionally flooded

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland, homesites

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Flooding, frost action, excess salt

*Irrigation:* Wetness, erodes easily, flooding

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X007N

## **1141—Wendane silt loam, sandy substratum**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats

*Elevation:* 4,400 to 4,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Wendane silt loam, sandy substratum, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—85 percent

#### *Contrasting inclusions:*

- Inclusion 1: Argenta very fine sandy loam, 0 to 2 percent slopes—Aeric Halaquepts, coarse-loamy, mixed (calcareous), mesic—5 percent

- Inclusion 2: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Bubus very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent

- Inclusion 4: Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—2 percent

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash capping sandy sediments

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, alkali sacaton, basin wildrye

### **Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 40 inches—silt loam, silty clay loam; subangular blocky structure; hard, firm; strongly alkaline (pH 8.8); strongly saline (40 to 60 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

40 to 60 inches or more—stratified sand to gravelly sand; 15 to 35 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SP-SM, SM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* February through

July—30 to 48 inches; rest of year—below 47 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* In the upper 40 inches—moderately slow; below this depth—very rapid

*Available water capacity:* 8.4 to 9.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—4; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper margins of alluvial flats

*Contrasting features:* Coarser textured throughout the profile

*Distinctive present vegetation:* Black greasewood

#### **Inclusion 2**

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Black greasewood, shadscale

#### **Inclusion 3**

*Position on landscape:* Alluvial flat remnants adjacent to fan skirts

*Contrasting features:* Well drained

#### **Inclusion 4**

*Position on landscape:* Lower margins of alluvial flats

*Contrasting features:* Water table at a depth of 12 to 18 inches

*Distinctive present vegetation:* Black greasewood

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

**Potential uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland, homesites

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Fair—wetness

*Sand:* Probable source

*Gravel:* Improbable source—too sandy

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

*Drainage:* Flooding, frost action, excess salt

*Irrigation:* Wetness, erodes easily, flooding

*Terraces and diversions:* Erodes easily, wetness

### **Interpretive Groups**

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X007N

## **1142—Wendane-Tweba association**

### **Map Unit Setting**

*Position on landscape:* Alluvial flats and flood plains

*Elevation:* 4,800 to 5,100 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Wendane very fine sandy loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—55 percent

- Tweba very fine sandy loam, drained, 0 to 4 percent slopes—Aeric Fluvaquents, coarse-loamy, mixed (calcareous), mesic—35 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—10 percent

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush

### **Typical Profile**

0 to 13 inches—very fine sandy loam; platy structure;

slightly hard, very friable; strongly alkaline (pH 9.0); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (25 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 40); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through July—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 10.8 to 12.0 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Characteristics of the Tweba Soil**

*Position on landscape:* Channeled and gullied areas of flood plains

*Parent material:* Loamy mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Basin big sagebrush, rubber rabbitbrush, basin wildrye, streambank wheatgrass

### **Typical Profile**

0 to 11 inches—very fine sandy loam; platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4

11 to 21 inches—fine sandy loam, very fine sandy loam, loam; massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified

classification—ML; estimated AASHTO classification—A-4

- 21 to 60 inches or more—stratified very fine sandy loam to loamy sand; 0 to 10 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

### Soil and Water Features

*Depth to seasonal high water table:* February through June—36 to 42 inches; rest of year—below 42 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 5.6 to 9.2 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fanlettes from adjacent fan skirts

*Contrasting features:* Silt loam throughout the profile

*Distinctive present vegetation:* Black greasewood, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Tweba soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair; wetland plants—poor; shallow water areas—very poor

#### Ratings of the Wendane Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt, excess sodium

#### Ratings of the Tweba Soil for Selected Uses

*Range seeding:* Fair—excess salt

*Daily cover for landfill:* Fair—too sandy, wetness

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding, frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

### Interpretive Groups

*Capability classification:* Wendane soil—VIIw, nonirrigated; Tweba soil—IIIw, irrigated, and VIw, nonirrigated

*Range site:* Wendane soil—024X011N; Tweba soil—024X006N

## 1143—Wendane silt loam, occasionally flooded

### Map Unit Setting

*Position on landscape:* Alluvial flats

*Elevation:* 4,500 to 5,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Wendane silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—10 percent
- Inclusion 2: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-silty, mixed (calcareous), mesic—3 percent
- Inclusion 3: Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—2 percent

### Characteristics of the Wendane Soil

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, seepweed

### Typical Profile

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); strongly saline (25 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* February through May—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasionally; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Lower areas of alluvial flats

*Contrasting features:* Frequently flooded

*Distinctive present vegetation:* Black greasewood, basin wildrye

#### Inclusion 2

*Position on landscape:* Alluvial flat remnants

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Torrey quailbush, black greasewood

### Inclusion 3

*Position on landscape:* Slightly convex higher parts of alluvial flat remnants

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Shadscale, black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated native pasture and hayland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—poor; domestic grasses and legumes (irrigated)—poor; wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—excess salt, excess sodium, too crusty

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

*Drainage:* Flooding, frost action, excess salt

*Irrigation:* Wetness, erodes easily, flooding

*Terraces and diversions:* Erodes easily, wetness

### Interpretive Groups

*Capability classification:* VIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X011N

## 1144—Wendane-Batan-Broyles association

### Map Unit Setting

*Position on landscape:* Alluvial flats and fan skirts

*Elevation:* 4,600 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Wendane silt loam, 0 to 2 percent slopes, frequently

flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—30 percent

- Batan silt loam, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—30 percent

- Broyles silt loam, moderately saline, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—10 percent

- Inclusion 2: Reese silt loam, 0 to 2 percent slopes—Aeric Halaquepts, fine-loamy, mixed (calcareous), mesic—5 percent

### **Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, basin wildrye, rubber rabbitbrush, inland saltgrass

### **Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through May—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—frequent; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

### **Characteristics of the Batan Soil**

*Position on landscape:* Alluvial flat remnants

*Parent material:* Kind—silty alluvium influenced by loess; source—volcanic rock high in pyroclastics

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood

### **Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 25 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 68 inches or more—stratified silt loam to silty clay loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, black greasewood, inland saltgrass, spiny horsebrush

### **Typical Profile**

0 to 5 inches—silt loam; subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly

sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4

- 5 to 11 inches—silt loam, very fine sandy loam, fine sandy loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4
- 11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; slightly hard, very friable; very strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 6.3 to 7.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Adjacent smooth inset fans  
*Contrasting features:* Silty loam throughout the profile  
*Distinctive present vegetation:* Shadscale, black greasewood

#### Inclusion 2

*Position on landscape:* Margins of alluvial flats  
*Contrasting features:* A seasonal water table within a depth of 40 inches  
*Distinctive present vegetation:* Black greasewood, shadscale, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Batan soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

### Ratings of the Wendane Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Ratings of the Batan Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Severe—low strength

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### Ratings of the Broyles Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

### Interpretive Groups

*Capability classification:* Wendane soil—VIIw, nonirrigated; Batan soil—IIIs, irrigated, and VIIs, nonirrigated; Broyles soil—IIs, irrigated, and VIIs, nonirrigated

*Range site:* Wendane soil—024X007N; Batan soil—024X003N; Broyles soil—024X003N

**1145—Wendane-Playas association****Map Unit Setting**

*Position on landscape:* Basin floors

*Elevation:* 4,500 to 4,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 120 days

**Composition**

*Major components:*

- Wendane silt loam, 0 to 2 percent slopes, occasionally flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—70 percent

- Playas—15 percent

*Contrasting inclusions:*

- Inclusion 1: Aquic Durorthidic Torriorthents, 0 to 2 percent slopes—Aquic Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 2: Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—5 percent

- Inclusion 3: Isolde fine sand, 4 to 30 percent slopes—Typic Torripsamments, mixed, mesic—5 percent

**Characteristics of the Wendane Soil**

*Position on landscape:* Alluvial flats

*Slope features:* Length—short; shape—slightly concave to slightly convex

*Dominant present vegetation:* Black greasewood, alkali rabbitbrush, seepweed

**Typical Profile**

0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—ML; estimated AASHTO classification—A-4

13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (25 to 40 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4

27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* February through May—30 to 48 inches; rest of year—below 48 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—February through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* High

**Characteristics of the Playas**

*Position on landscape:* Dry lake and sink areas on basin floors

*Slope features:* Length—long; shape—smooth or slightly concave

*Dominant present vegetation:* None

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Concave channels of alluvial flats

*Contrasting features:* Less sodium affected

*Distinctive present vegetation:* Iodinebush, alkali sacaton, inland saltgrass

**Inclusion 2**

*Position on landscape:* Lower part of alluvial flats

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Black greasewood, basin wildrye, alkali rabbitbrush

**Inclusion 3**

*Position on landscape:* Convex, partially stabilized sand dunes adjacent to playas

*Contrasting features:* Sandy throughout the profile, excessively drained

*Distinctive present vegetation:* Black greasewood, spiny hopsage

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

**Ratings of the Wendane Soil for Selected Uses**

*Range seeding:* Poor—excess salt, excess sodium, too crusty

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness  
*Local roads and streets:* Severe—flooding, frost action  
*Roadfill:* Poor—low strength  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—excess salt, excess sodium  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Interpretive Groups**

*Capability classification:* Wendane soil—VIIw, nonirrigated; Playas—VIIIw  
*Range site:* Wendane soil—024X011N

## **1146—Wendane-Sonoma-Valmy association**

### **Map Unit Setting**

*Position on landscape:* Flood plains, alluvial flats, and fan skirts  
*Elevation:* 5,200 to 5,400 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Wendane silt loam, 0 to 2 percent slopes, frequently flooded—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—35 percent
- Sonoma silt loam, drained, 0 to 2 percent slopes, occasionally flooded—Aeric Fluvaquents, fine-silty, mixed (calcareous), mesic—30 percent
- Valmy very fine sandy loam, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Parana silt loam, 0 to 2 percent slopes—Fluvaquentic Haplaquolls, fine-silty, mixed (calcareous), mesic—6 percent
- Inclusion 2: Aeric Halaquepts, 0 to 2 percent slopes—Aeric Halaquepts, fine-silty, mixed (calcareous), mesic—6 percent
- Inclusion 3: Durorthidic Torriorthents, 2 to 8 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent

### **Characteristics of the Wendane Soil**

*Position on landscape:* Broad alluvial flats adjacent to flood plains  
*Parent material:* Mixed silty alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Black greasewood, rubber rabbitbrush, inland saltgrass, basin wildrye

### **Typical Profile**

- 0 to 13 inches—silt loam; platy structure; slightly hard, very friable; very strongly alkaline (pH 9.6); strongly saline (30 to 50 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 13 to 27 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 27 to 60 inches or more—stratified silt loam to clay loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); strongly saline (16 to 30 mmhos/cm); slightly to moderately sodic (SAR 20 to 35); estimated Unified classification—CL, ML; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* February through May—30 to 48 inches; rest of year—below 48 inches  
*Flooding:* Frequency—frequent; duration—brief or long; months—February through June  
*Permeability:* Moderately slow  
*Available water capacity:* 11.4 to 12.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* High

### **Characteristics of the Sonoma Soil**

*Position on landscape:* Flood plains  
*Parent material:* Silty mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Black greasewood, basin big sagebrush, basin wildrye

### **Typical Profile**

- 0 to 10 inches—silt loam; subangular blocky structure; hard, friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 10 to 60 inches or more—stratified silty clay loam to silt

loam; massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML, CL; estimated AASHTO classification—A-6, A-7

### Soil and Water Features

*Depth to seasonal high water table:* March through June—42 to 60 inches; rest of year—less than 60 inches

*Flooding:* Frequency—occasional; duration—brief or long; months—March through June

*Permeability:* Moderately slow

*Available water capacity:* 11.4 to 12.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—4L

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* High

### Characteristics of the Valmy Soil

*Position on landscape:* Fan skirts

*Parent material:* Loess mantled, loamy mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, basin big sagebrush, black greasewood

### Typical Profile

0 to 6 inches—very fine sandy loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM; estimated AASHTO classification—A-4

6 to 42 inches—stratified very fine sandy loam to gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 10 to 25 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM; estimated AASHTO classification—A-4, A-2, A-1

42 to 60 inches or more—gravelly sand, very gravelly sand; 0 to 10 percent cobbles and stones and 30 to 70 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SP-SM, SM, GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.7 to 6.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—4; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Active flood plains immediately adjacent to stream channels

*Contrasting features:* Thick, dark colored surface layer, very poorly drained

*Distinctive present vegetation:* Sedge, rush, creeping wildrye, willow

#### Inclusion 2

*Position on landscape:* Outer margins of flood plains

*Contrasting features:* Somewhat poorly drained

*Distinctive present vegetation:* Torrey quailbush, black greasewood

#### Inclusion 3

*Position on landscape:* Convex fanlettes emerging from steeper stream tributaries

*Contrasting features:* Slopes of 2 to 8 percent

*Distinctive present vegetation:* Black greasewood, shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Wendane soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor; wetland plants—poor; shallow water areas—fair

*Suitability of the Sonoma soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Valmy soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings of the Wendane Soil for Selected Uses

*Range seeding:* Poor—excess salt, excess sodium

*Daily cover for landfill:* Poor—excess salt, excess sodium

*Shallow excavations:* Moderate—flooding, wetness

*Local roads and streets:* Severe—flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, excess sodium

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

### **Ratings of the Sonoma Soil for Selected Uses**

*Range seeding:* Poor—excess salt

*Daily cover for landfill:* Fair—too clayey

*Shallow excavations:* Moderate—wetness, flooding

*Local roads and streets:* Severe—low strength, flooding, frost action

*Roadfill:* Poor—low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt

*Pond reservoir areas:* Slight

*Embankments, dikes, and levees:* Moderate—piping, wetness

### **Ratings of the Valmy Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Fair—small stones, thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Fair—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping, seepage, thin layer

### **Interpretive Groups**

*Capability classification:* Wendane soil—VIIw, nonirrigated; Sonoma soil—IIIw, irrigated, and VIIw, nonirrigated; Valmy soil—IIs, irrigated, and VIc, nonirrigated

*Range site:* Wendane soil—024X007N; Sonoma soil—024X006N; Valmy soil—024X022N

## **1150—Weso fine sandy loam**

### **Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,500 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Weso fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Blacka very fine sandy loam, 0 to 2 percent slopes—Entic Durorthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 2: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 3: Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

### **Characteristics of the Weso Soil**

*Position on landscape:* Fan skirts

*Parent material:* Mixed alluvium with a loess mantle high in volcanic ash

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.5); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

5 to 11 inches—loam, fine sandy loam, very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML, CL-ML, SM, SM-SC; estimated AASHTO classification—A-4

11 to 60 inches or more—fine sandy loam, very fine sandy loam; 5 to 5 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 7.8 to 9.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent nonburied fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Upper part of fan skirts

*Contrasting features:* Layer of weak silica accumulation not continuously cemented

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones, excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily, excess salt

*Terraces and diversions:* Erodes easily, soil blowing

### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X002N

### **1158—Whirlo very fine sandy loam, 2 to 4 percent slopes, occasionally flooded**

#### **Map Unit Setting**

*Position on landscape:* Inset fans

*Elevation:* 4,500 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Whirlo very fine sandy loam, 2 to 4 percent slopes, occasionally flooded—Typic Camborthids, loamy-skeletal, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Creemon very fine sandy loam, strongly saline-sodic, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—6 percent
- Inclusion 2: Xerollic Camborthids, 2 to 4 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 3: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—4 percent

#### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans

*Parent material:* Gravelly mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Black greasewood, shadscale, spiny hopsage

#### **Typical Profile**

- 0 to 7 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—SM; estimated AASHTO classification—A-4
- 7 to 13 inches—fine sandy loam; 0 to 15 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

13 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Flooding:* Frequency—occasional; duration—very brief; months—March through June  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.7 to 5.9 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave adjacent fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Bud sagebrush

#### Inclusion 2

*Position on landscape:* Slightly lower areas and adjacent to channels of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, Wyoming big sagebrush, basin wildrye

#### Inclusion 3

*Position on landscape:* Fanlettes from adjacent fan piedmont remnants

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Spiny hopsage, Wyoming big sagebrush, bottlebrush squirreltail

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Moderate—flooding

*Local roads and streets:* Severe—flooding

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* IIIw, irrigated, and VIIw, nonirrigated

*Range site:* 024X003N

## 1160—Whirlo gravelly loam, 2 to 8 percent slopes

### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Whirlo gravelly loam, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—90 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, fine-silty, mixed (calcareous), mesic—4 percent

- Inclusion 2: Typic Camborthids, 2 to 8 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—3 percent

- Inclusion 3: Typic Nadurargids, 2 to 8 percent slopes—Typic Nadurargids, loamy, mixed, mesic, shallow—3 percent

### Characteristics of the Whirlo Soil

*Position on landscape:* Broad inset fans

*Parent material:* Kind—alluvium influenced by loess; source—basalt, rhyolite, and tuffs

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 12 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated

Unified classification—ML, GM; estimated AASHTO classification—A-4

12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 6 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.5 to 5.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly convex adjacent fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Areas adjacent to channels

*Contrasting features:* Very gravelly sand substratum

*Distinctive present vegetation:* Shadscale

#### Inclusion 3

*Position on landscape:* Fan piedmont remnants

*Contrasting features:* Indurated duripan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* IIIe, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## 1162—Whirlo silt loam, 0 to 2 percent slopes

### Map Unit Setting

*Position on landscape:* Inset fans and fan skirts

*Elevation:* 4,400 to 4,900 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Whirlo silt loam, 0 to 2 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles very fine sandy loam, 4 to 8 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent

- Inclusion 2: Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

- Inclusion 3: Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### Characteristics of the Whirlo Soil

*Position on landscape:* Inset fans and fan skirts

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass, bottlebrush squirreltail

### Typical Profile

- 0 to 12 inches—silt loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.9 to 6.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper margins of fan skirts  
*Contrasting features:* Fine sandy loam throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Lower margins of fan skirts  
*Contrasting features:* Silt loam throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Outer margins of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Winterfat

### Major Uses

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### Wildlife habitat elements:

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### Ratings and Restrictive Features for Selected Uses and Practices

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Poor—seepage, small stones  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim, excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage  
*Drainage:* Deep to water  
*Irrigation:* Droughty  
*Terraces and diversions:* Erodes easily, droughty

### Interpretive Groups

*Capability classification:* IIs, irrigated, and VIIs, nonirrigated  
*Range site:* 024X002N

### 1163—Whirlo silt loam, 2 to 4 percent slopes

#### Map Unit Setting

*Position on landscape:* Inset fans  
*Elevation:* 4,600 to 5,600 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### Composition

#### Major components:

- Whirlo silt loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—85 percent
- Contrasting inclusions:*
  - Inclusion 1: Broyles very fine sandy loam, 2 to 4

percent slopes—Duric Camborthids, coarse-loamy, mixed mesic—5 percent

• Inclusion 2: Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

• Inclusion 3: Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 12 inches—silt loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

12 to 24 inches—stratified very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.9 to 6.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth lower part of inset fans

*Contrasting features:* Less than 35 percent rock fragments in the substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Smooth fan skirts at the terminus of inset fans

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Outer margins of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Winterfat

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

*Drainage:* Deep to water

*Irrigation:* Droughty, slope

*Terraces and diversions:* Erodes easily

### **Interpretive Groups**

*Capability classification:* IIe, irrigated, and VIIs, nonirrigated

*Range site:* 024X002N

## 1165—Whirlo-Creemon association

### Map Unit Setting

*Position on landscape:* Inset fans

*Elevation:* 4,500 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Whirlo gravelly loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—45 percent
- Creemon silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 0 to 2 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Durixerollic Camborthids, 0 to 2 percent slopes, occasionally flooded—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 3: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### Characteristics of the Whirlo Soil

*Position on landscape:* Inset fan remnants

*Parent material:* Very gravelly mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 12 inches—gravelly loam; 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam, fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—stratified very gravelly loam, extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline

(4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.5 to 5.0 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Creemon Soil

*Position on landscape:* Irregularly channeled and overwashed parts of inset fans

*Parent material:* Silty mixed alluvium; influenced by volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 10 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 10 to 15 inches—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 15 to 45 inches—stratified very fine sandy loam to silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—stratified gravelly very fine sandy loam to fine sandy loam; 15 to 30 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-4

## Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 9.8 to 12.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

## Contrasting Inclusions

### Inclusion 1

*Position on landscape:* Smooth to slightly concave lower portions of inset fans

*Contrasting features:* Strongly saline surface layer

*Distinctive present vegetation:* Black greasewood, shadscale

### Inclusion 2

*Position on landscape:* Areas adjacent to stream channels on the lower part of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, bluegrass

### Inclusion 3

*Position on landscape:* Areas adjacent to stream channels on the upper part of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

## Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available, homesites

## Wildlife habitat elements:

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Creemon soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

## Ratings of the Whirlo Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

## Ratings of the Creemon Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—thin layer

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping, excess salt

## Interpretive Groups

*Capability classification:* Whirlo soil—Ile, irrigated, and VIIs, nonirrigated; Creemon soil—Ilc, irrigated, and VIIc, nonirrigated

*Range site:* Whirlo soil—024X002N; Creemon soil—024X002N

## 1166—Whirlo-Pumper silt loams

### Map Unit Setting

*Position on landscape:* Fan skirts

*Elevation:* 4,350 to 4,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

## Composition

*Major components:*

- Whirlo silt loam, 0 to 2 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—50 percent
- Pumper silt loam, 0 to 2 percent slopes—Typic Camborthids, sandy-skeletal, mixed, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Orovada fine sandy loam, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—10 percent

## Characteristics of the Whirlo Soil

*Position on landscape:* Upper and middle part of fan skirts

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 12 inches—silt loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—very gravelly sandy loam, extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.4); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 20 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.9 to 6.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Pumper Soil

*Position on landscape:* Lower fan skirts, adjacent to channels, and outwash areas  
*Parent material:* Loess high in volcanic ash over gravelly and sandy mixed alluvium  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 12 inches—silt loam; 0 to 15 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated

Unified classification—ML; estimated AASHTO classification—A-4

- 12 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sand; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); massive; hard, friable; moderately alkaline (pH 8.3); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 3.1 to 4.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—2; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper parts of inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Pumper soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings of the Whirlo Soil for Selected Uses

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Poor—seepage, small stones  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim, excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage

**Ratings of the Pumper Soil for Selected Uses***Range seeding:* Poor—too arid*Daily cover for landfill:* Poor—too sandy, small stones, seepage*Shallow excavations:* Severe—cutbanks cave*Local roads and streets:* Slight*Roadfill:* Good*Sand:* Probable source*Gravel:* Probable source*Topsoil:* Poor—too sandy, small stones, area reclaim*Pond reservoir areas:* Severe—seepage*Embankments, dikes, and levees:* Severe—seepage**Interpretive Groups***Capability classification:* Whirlo soil—VIIIs, nonirrigated; Pumper soil—IVs, irrigated, and VIIIs, nonirrigated*Range site:* Whirlo soil—024X002N; Pumper soil—024X002N**1168—Whirlo-Oxcorel association****Map Unit Setting***Position on landscape:* Piedmont slopes*Elevation:* 4,600 to 5,500 feet*Average annual precipitation:* About 7 inches*Average annual air temperature:* About 48 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

- Whirlo gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—50 percent
- Oxcorel very fine sandy loam, 4 to 15 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—35 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 2 to 15 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—10 percent
- Inclusion 2: Durorthidic Torriorthents, 2 to 8 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

**Characteristics of the Whirlo Soil***Position on landscape:* Inset fans and fan skirts*Parent material:* Mixed alluvium influenced by loess*Slope features:* Length—short; shape—smooth*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail**Typical Profile**

0 to 12 inches—gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); platy structure; slightly

hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4

12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features***Depth to seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* Moderately rapid*Available water capacity:* 4.0 to 5.4 inches*Water-supplying capacity:* 6 inches*Runoff:* Slow*Hydrologic group:* B*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Low*Corrosivity:* To steel—high; to concrete—low*Potential frost action:* Low**Characteristics of the Oxcorel Soil***Position on landscape:* Fan piedmont remnants*Parent material:* Mixed alluvium mantled by loess*Slope features:* Length—short; shape—convex*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail**Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly

alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.0 to 6.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fan drainageways and upper inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Moderately well drained

*Distinctive present vegetation:* Shadscale, black greasewood

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### Ratings of the Whirlo Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey, slope

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Interpretive Groups

*Capability classification:* Whirlo soil—IIIe, irrigated, and VIIs, nonirrigated; Oxcorel soil—VIIs, nonirrigated

*Range site:* Whirlo soil—024X002N; Oxcorel soil—024X002N

## 1169—Whirlo-Broyles association

### Map Unit Setting

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 4,700 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Whirlo gravelly very fine sandy loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—55 percent
- Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—30 percent

#### Contrasting inclusions:

- Inclusion 1: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—9 percent
- Inclusion 2: Xeric Torriorthents, 2 to 8 percent

slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—6 percent

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Upper fan skirts

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 12 inches—gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4

12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.0 to 5.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Lower fan skirts and inset fans

*Parent material:* Loess over loamy mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR 5 to 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 13 to 25); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, upper inset fans and upper margins of fan skirts

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent to shallow stream channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

**Wildlife habitat elements:**

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

**Ratings of the Broyles Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

**Interpretive Groups**

*Capability classification:* Whirlo soil—IIIe, irrigated, and VIIc, nonirrigated; Broyles soil—IIe, irrigated, and VIIc, nonirrigated

*Range site:* Whirlo soil—024X002N; Broyles soil—024X002N

**1170—Wholan silt loam****Map Unit Setting**

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 4,700 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Antel silt loam, 0 to 2 percent slopes—

Duric Camborthids, fine-silty, mixed, mesic—5 percent

- Inclusion 2: Creemon silt loam, 2 to 4 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

- Inclusion 3: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—5 percent

**Characteristics of the Wholan Soil**

*Position on landscape:* Fan skirts and inset fans

*Parent material:* Loess capped, silty mixed alluvium

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Winterfat, bud sagebrush, bottlebrush squirreltail, shadscale

**Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 60 inches or more—very fine sandy loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 9.7 to 11.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Smooth lower margins of fan skirts

*Contrasting features:* Layer of weak silica accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush, Indian ricegrass

**Inclusion 2**

*Position on landscape:* Smooth higher areas of fan skirt remnants and inset fans

*Contrasting features:* Layer of weak silica accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Convex lower margins of fan skirts

*Contrasting features:* Layer of weak silica accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

**Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

**Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

*Drainage:* Deep to water

*Irrigation:* Erodes easily

*Terraces and diversions:* Erodes easily

**Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated

*Range site:* 024X004N

**1174—Wholan silt loam, sandy substratum****Map Unit Setting**

*Position on landscape:* Fan skirts

*Elevation:* 4,700 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Wholan silt loam, sandy substratum, 0 to 2 percent

slopes—Typic Camborthids, coarse-silty, mixed, mesic—85 percent

*Contrasting inclusions:*

- Inclusion 1: Relley silt loam, 0 to 2 percent slopes—Duric Camborthids, fine-silty, mixed, mesic—10 percent
- Inclusion 2: Hessing silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Wholan Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess capped mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Winterfat, Indian ricegrass, bottlebrush squirreltail

**Typical Profile**

- 0 to 6 inches—silt loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 6 to 45 inches—very fine sandy loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 45 to 60 inches or more—stratified very gravelly loam to very gravelly sand; 0 to 10 percent cobbles and stones and 60 to 70 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 8.2 to 10.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Lower areas of fan skirts

*Contrasting features:* Layer of weak silica accumulation  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Upper margins of fan skirts  
*Contrasting features:* Fine sandy loam and gravelly sandy loam throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat, irrigated cropland

#### **Wildlife habitat elements:**

*Suitability for named elements:* Grain and seed crops (irrigated)—good; domestic grasses and legumes (irrigated)—good; wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor; wetland plants—poor; shallow water areas—very poor

#### **Ratings and Restrictive Features for Selected Uses and Practices**

*Range seeding:* Poor—too arid, excess salt  
*Daily cover for landfill:* Fair—thin layer  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Moderate—flooding  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Fair—area reclaim, excess salt  
*Pond reservoir areas:* Moderate—seepage  
*Embankments, dikes, and levees:* Severe—hard to pack, excess salt  
*Drainage:* Deep to water  
*Irrigation:* Erodes easily, excess salt  
*Terraces and diversions:* Erodes easily

#### **Interpretive Groups**

*Capability classification:* IIc, irrigated, and VIIc, nonirrigated  
*Range site:* 024X004N

### **1177—Wholan, strongly alkaline-Rasille association**

#### **Map Unit Setting**

*Position on landscape:* Fan skirts and inset fans  
*Elevation:* 5,400 to 5,800 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Wholan very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—65 percent
  - Rasille silt loam, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-silty, mixed, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Kelk silt loam, 0 to 4 percent slopes, occasionally flooded—Durixerollic Camborthids, fine-silty, mixed, mesic—5 percent
  - Inclusion 2: Xerollic Camborthids, 0 to 2 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—5 percent
  - Inclusion 3: Creemon very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—5 percent

#### **Characteristics of the Wholan Soil**

*Position on landscape:* Broad fan skirts  
*Parent material:* Silty mixed alluvium influenced by loess  
*Slope features:* Length—long; shape—slightly convex  
*Dominant present vegetation:* Saltbush

#### **Typical Profile**

0 to 5 inches—very fine sandy loam; platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 5 to 60 inches or more—very fine sandy loam, silt loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 9.7 to 11.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Rasille Soil**

*Position on landscape:* Inset fans

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth and concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 6 inches—silt loam; platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 15 inches—very fine sandy loam, silt loam; prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 26 inches or more—very fine sandy loam, silt loam; massive; soft, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 9.9 to 11.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Inset fans near lower margins of fan skirts

*Contrasting features:* Receives additional moisture from flooding

*Distinctive present vegetation:* Basin big sagebrush, black greasewood

##### **Inclusion 2**

*Position on landscape:* Concave higher areas of inset fans

*Contrasting features:* Loam and sandy loam throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

##### **Inclusion 3**

*Position on landscape:* Slightly convex higher areas of fan skirts

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### **Wildlife habitat elements:**

*Suitability of the Wholan soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Rasille soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Wholan Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Rasille Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action, flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

#### **Interpretive Groups**

*Capability classification:* Wholan soil—IIc, irrigated, and VIc, nonirrigated; Rasille soil—IIc, irrigated, and VIc, nonirrigated

*Range site:* Wholan soil—024X012N; Rasille soil—024X005N

**1178—Wholan-Rasille association****Map Unit Setting**

*Position on landscape:* Fan skirts and inset fans

*Elevation:* 5,000 to 5,400 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Wholan silt loam, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—60 percent
- Rasille silt loam, gravelly substratum, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-silty, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Camborthids, 0 to 2 percent slopes—Typic Camborthids, coarse-silty, mixed, mesic—5 percent
- Inclusion 2: Duric Camborthids, 0 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Durixerollic Camborthids, 0 to 2 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent

**Characteristics of the Wholan Soil**

*Position on landscape:* Fan skirts

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Bud sagebrush, winterfat

**Typical Profile**

0 to 5 inches—silt loam; platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 60 inches or more—very fine sandy loam, silt loam; massive; slightly hard, very friable; moderately alkaline (pH 8.2); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 9.7 to 11.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Characteristics of the Rasille Soil**

*Position on landscape:* Inset fans

*Parent material:* Silty mixed alluvium influenced by loess

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

**Typical Profile**

0 to 6 inches—silt loam; platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

6 to 15 inches—very fine sandy loam, silt loam; subangular blocky structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4

15 to 41 inches—very fine sandy loam, silt loam; massive; soft, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

41 to 60 inches or more—stratified fine sandy loam to very gravelly coarse sand; 25 to 50 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 7.6 to 9.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly convex lower margins of fan skirts

*Contrasting features:* Strongly alkaline surface layer

*Distinctive present vegetation:* Saltbush, bottlebrush squirreltail

#### **Inclusion 2**

*Position on landscape:* Slightly higher areas on fan skirts

*Contrasting features:* Loamy and coarse textured throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Inclusion 3**

*Position on landscape:* Convex upper margins of fan skirts

*Contrasting features:* Loamy and coarse textured throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush, small rabbitbrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland, wildlife habitat, irrigated cropland if irrigation water is made available

#### **Wildlife habitat elements:**

*Suitability of the Wholan soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Rasille soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Wholan Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—excess salt

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

#### **Ratings of the Rasille Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Fair—thin layer

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action, flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—area reclaim

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

### **Interpretive Groups**

*Capability classification:* Wholan soil—IIc, irrigated, and VIIc, nonirrigated; Rasille soil—IIc, irrigated, and VIc, nonirrigated

*Range site:* Wholan soil—024X004N; Rasille soil—028B010N

## **1201—Slaven-Linrose-Cleavage association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,500 to 7,200 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Slaven very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—45 percent
- Linrose gravelly loam, 50 to 75 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—30 percent
- Cleavage very gravelly loam, 4 to 15 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Loncan loam, 30 to 75 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—7 percent
- Inclusion 2: Rock outcrop—2 percent
- Inclusion 3: Aridic Argixerolls, 50 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—1 percent

### **Characteristics of the Slaven Soil**

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum influenced by loess; source—chert, shale, and quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, arrowleaf balsamroot

### **Typical Profile**

0 to 4 inches—very gravelly loam; 55 to 65 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2);

estimated Unified classification—GM; estimated AASHTO classification—A-2

- 4 to 22 inches—extremely gravelly clay, extremely gravelly sandy clay, extremely gravelly clay loam; 0 to 15 percent cobbles and stones and 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 22 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.9 to 2.5 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Linrose Soil

*Position on landscape:* North- and east-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—chert, shale, and quartzite  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Black sagebrush, Idaho fescue, bluebunch wheatgrass

### Typical Profile

- 0 to 8 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, ML; estimated AASHTO classification—A-4
- 8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2
- 26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.5 to 3.7 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Very rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Cleavage Soil

*Position on landscape:* Spurs and crests of mountains  
*Parent material:* Kind—residuum; source—extrusive volcanic rock  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Black sagebrush, low sagebrush, bluebunch wheatgrass

### Typical Profile

- 0 to 4 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6
- 4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.6 to 1.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, south-facing side slopes of mountains

*Contrasting features:* Lacks layer of clay accumulation

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue

#### **Inclusion 2**

*Position on landscape:* Random small peaks of mountains

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Convex, north-facing side slopes of mountains

*Contrasting features:* Receives additional moisture from drifted snow

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Slaven Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Linrose Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Slaven soil—VIIs, nonirrigated; Linrose soil—VIIe, nonirrigated; Cleavage soil—VIIs, nonirrigated

*Range site:* Slaven soil—024X029N; Linrose soil—024X042N; Cleavage soil—024X027N

## **1202—Slaven-Wiskan-Graley Variant association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,300 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 90 days

### **Composition**

#### **Major components:**

- Slaven very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—35 percent

- Wiskan gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—30 percent

- Graley Variant very gravelly loam, 15 to 50 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—20 percent

#### **Contrasting inclusions:**

- Inclusion 1: Glean gravelly silt loam, 30 to 50 percent

slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—8 percent

- Inclusion 2: Cleavage very gravelly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—5 percent
- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Slaven Soil**

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum influenced by loess; source—chert, shale, and quartzite

### **Typical Profile**

- 0 to 4 inches—very gravelly loam; 55 to 65 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2
- 4 to 22 inches—extremely gravelly clay, extremely gravelly sandy clay, extremely gravelly clay loam; 0 to 15 percent cobbles and stones and 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 22 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.9 to 2.5 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Wiskan Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—thin loess mantle over residuum and colluvium; source—chert and other various kinds of rock

*Slope features:* Length—long; shape—concave to slightly convex

*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass

### **Typical Profile**

- 0 to 16 inches—gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); granular structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, CL-ML, SM-SC, ML; estimated AASHTO classification—A-4
- 16 to 28 inches—very gravelly clay loam, very gravelly loam, extremely gravelly clay loam; 10 to 25 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.4 to 3.0 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Graley Variant Soil**

*Position on landscape:* Ridges and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—chert

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass

### **Typical Profile**

- 0 to 7 inches—very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than

2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

7 to 15 inches—very gravelly clay loam, very gravelly clay; 10 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.2 to 2.1 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, north-facing pockets on side slopes of mountains

*Contrasting features:* Additional moisture from drifted snow

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush

#### **Inclusion 2**

*Position on landscape:* Windswept crests of mountains

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Black sagebrush, low sagebrush

#### **Inclusion 3**

*Position on landscape:* Random small peaks, ridges, and rimrock of mountains

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Wiskan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Graley Variant soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Slaven Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Wiskan Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Capability classification:* Slaven soil—VIIs, nonirrigated; Wiskan soil—VIIe, nonirrigated; Graley Variant soil—VIIs, nonirrigated

*Range site:* Slaven soil—024X029N; Wiskan soil—024X031N; Graley Variant soil—024X028N

## 1203—Slaven-Glean-Cleavage association

### Map Unit Setting

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,500 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 80 days

### Composition

*Major components:*

- Slaven very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—35 percent
- Glean gravelly loam, 30 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—30 percent
- Cleavage very gravelly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—20 percent

*Contrasting inclusions:*

- Inclusion 1: Hapgood very gravelly loam, 50 to 75 percent slopes—Pachic Cryoborolls, loamy-skeletal, mixed—8 percent
- Inclusion 2: Cleavage extremely gravelly loam, 8 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—4 percent
- Inclusion 3: Sumine extremely gravelly loam, 30 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—3 percent

### Characteristics of the Slaven Soil

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium influenced by loess; source—chert, shale, and quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, Douglas rabbitbrush, bluebunch wheatgrass, Idaho fescue

*Surface cover:* 45 percent pebbles, 5 percent cobbles

### Typical Profile

- 0 to 4 inches—very gravelly loam; 55 to 65 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2
- 4 to 22 inches—extremely gravelly clay, extremely gravelly sandy clay, extremely gravelly clay loam; 0 to 15 percent cobbles and stones and 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.2); nonsaline

(less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.9 to 2.5 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Glean Soil

*Position on landscape:* North- and west-facing side slopes and snow pockets on mountains

*Parent material:* Kind—gravelly colluvium and residuum; source—various kinds of rock

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Mountain big sagebrush, snowberry, lanceleaf rabbitbrush, Idaho fescue, bluegrass

### Typical Profile

- 0 to 6 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4
- 6 to 49 inches—very gravelly loam, very gravelly sandy loam; 0 to 25 percent cobbles and stones and 40 to 75 percent pebbles (by weight); massive; soft, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 49 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.1 to 5.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, Douglas rabbitbrush, Sandberg bluegrass, bluebunch wheatgrass

### **Typical Profile**

0 to 4 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, higher snow pockets of mountains

*Contrasting features:* Higher water-supplying capacity

*Distinctive present vegetation:* Mountain big sagebrush, snowberry, Sandberg bluegrass

#### **Inclusion 2**

*Position on landscape:* Convex, windswept, narrow crests of mountains

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, Idaho fescue

#### **Inclusion 3**

*Position on landscape:* Convex, lower, south-facing side slopes of mountains

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Mountain big sagebrush, Douglas rabbitbrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Glean soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Slaven Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Glean Soil for Selected Uses**

*Range seeding:* Fair—droughty, small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, slope  
*Pond reservoir areas:* Severe—slope, seepage  
*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—large stones

#### **Interpretive Groups**

*Capability classification:* Slaven soil—VIIIs, nonirrigated;  
 Glean soil—VIIe, nonirrigated; Cleavage soil—VIIIs,  
 nonirrigated  
*Range site:* Slaven soil—024X029N; Glean soil—  
 024X023N; Cleavage soil—024X027N

### **1212—Wiskan-Roca-Bregar association**

#### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 6,000 to 7,300 feet  
*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 43 degrees F  
*Frost-free season:* About 90 days

#### **Composition**

##### *Major components:*

- Wiskan gravelly silt loam, 15 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—40 percent
  - Roca extremely cobbly sandy clay loam, 15 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—30 percent
  - Bregar extremely gravelly sandy loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—15 percent
- Contrasting inclusions:*
- Inclusion 1: Linrose extremely stony loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 2: Locane gravelly very fine sandy loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, clayey-

skeletal, montmorillonitic, frigid—5 percent  
 • Inclusion 3: Aridic Haploxerolls, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent

#### **Characteristics of the Wiskan Soil**

*Position on landscape:* North- and east-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium with a thin loess mantle; source—chert and various kinds of rock  
*Slope features:* Length—short; shape—smooth to slightly convex  
*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass

#### **Typical Profile**

0 to 16 inches—gravelly silt loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); granular structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SM-SC, ML, CL-ML; estimated AASHTO classification—A-4  
 16 to 28 inches—very gravelly clay loam, very gravelly loam, extremely gravelly clay loam; 10 to 25 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2  
 28 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.6 to 3.2 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

#### **Characteristics of the Roca Soil**

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—shale and chert

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, bluebunch wheatgrass

### Typical Profile

0 to 5 inches—extremely cobbly sandy clay loam; 50 to 65 percent cobbles and stones or 60 to 75 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

5 to 27 inches—very gravelly clay loam, very gravelly clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.8 to 3.5 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of the Bregar Soil

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex to smooth

*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass, low sagebrush

### Typical Profile

0 to 4 inches—extremely gravelly sandy loam; 10 to 20 percent cobbles and stones and 70 to 80 percent pebbles (by weight); platy structure; soft, very

friable; slightly acid (pH 6.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GP-GM, GP-GC, GM; estimated AASHTO classification—A-1, A-2

4 to 11 inches—very gravelly clay loam, extremely gravelly loam, very cobbly sandy clay loam; 0 to 40 percent cobbles and stones and 65 to 80 percent pebbles (by weight); angular blocky structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

11 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 5 to 12 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.0 to 1.3 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave, north-facing, colluvial back slopes of mountains

*Contrasting features:* Higher water-supplying capacity

*Distinctive present vegetation:* Black sagebrush, Idaho fescue

#### Inclusion 2

*Position on landscape:* Low elevation, south- and west-facing side slopes of mountains

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Wyoming big sagebrush, Thurber needlegrass

#### Inclusion 3

*Position on landscape:* North-facing snow pockets on concave back slopes of mountains

*Contrasting features:* Receives additional soil moisture from drifted snow

*Distinctive present vegetation:* Idaho fescue, mountain big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Wiskan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bregar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Wiskan Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Roca Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Bregar Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, rooting depth

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Wiskan soil—VIIe, nonirrigated; Roca soil—VIIs, nonirrigated; Bregar soil—VIIs, nonirrigated

*Range site:* Wiskan soil—024X031N; Roca soil—024X028N; Bregar soil—024X016N

**1215—Wiskan-Locane association****Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,300 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free season:* About 80 days

**Composition****Major components:**

- Wiskan gravelly silt loam, 30 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—60 percent
  - Locane very gravelly loam, 30 to 50 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—25 percent
- Contrasting inclusions:**
- Inclusion 1: Cleavage extremely cobbly loam, 15 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 2: Glean gravelly silt loam, 30 to 50 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 3: Xerollic Haplargids, 30 to 50 percent slopes—Xerollic Haplargids, fine, montmorillonitic, frigid—5 percent

**Characteristics of the Wiskan Soil**

*Position on landscape:* Convex side slopes of mountains

*Parent material:* Kind—residuum with a thin loess mantle; source—chert, shale, and various other rocks

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass

**Typical Profile**

- 0 to 16 inches—gravelly silt loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); granular structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML, SM-SC, CL-ML; estimated AASHTO classification—A-4
- 16 to 28 inches—very gravelly clay loam, very gravelly loam, extremely gravelly clay loam; 10 to 25 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0);

nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.6 to 3.2 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—moderate

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Locane Soil

*Position on landscape:* Concave side slopes of mountains

*Parent material:* Kind—residuum; source—shale and conglomerate

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Big sagebrush, bluebunch wheatgrass

### Typical Profile

0 to 6 inches—very gravelly loam; 5 to 15 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

6 to 14 inches—very gravelly clay loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.4 to 1.9 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—Moderate; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex, windswept crests of mountains

*Contrasting features:* Lower water-supplying capacity

*Distinctive present vegetation:* Low sagebrush, black sagebrush, bluegrass

#### Inclusion 2

*Position on landscape:* Concave, north-facing snow pockets on side slopes of mountains

*Contrasting features:* Receives additional moisture from drifted snow

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue

#### Inclusion 3

*Position on landscape:* Lower side slopes of mountains

*Contrasting features:* Clayey subsoil

*Distinctive present vegetation:* Black sagebrush, bluegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Wiskan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Locane soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Wiskan Soil for Selected Uses

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Locane Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Wiskan soil—VIIe, nonirrigated; Locane soil—VIIs, nonirrigated

*Range site:* Wiskan soil—024X031N; Locane soil—024X035N

## **1216—Wiskan-Linrose association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,400 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 42 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Wiskan very gravelly silt loam, 30 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—60 percent
- Linrose gravelly silt loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Slaven very gravelly silt loam, 50 to 75 percent slopes—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—7 percent
- Inclusion 2: Rubble land—6 percent
- Inclusion 3: Bregar extremely gravelly loam, 8 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—2 percent

### **Characteristics of the Wiskan Soil**

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—a thin loess mantle over residuum and colluvium; source—chert

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass

### **Typical Profile**

0 to 16 inches—very gravelly silt loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); granular structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-1, A-2, A-4

16 to 28 inches—very gravelly clay loam, very gravelly loam, extremely gravelly clay loam; 10 to 25 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

28 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.4 to 3.0 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Linrose Soil**

*Position on landscape:* Side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—chert, shale, and quartzite

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Black sagebrush, Idaho fescue

### **Typical Profile**

0 to 8 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, ML; estimated AASHTO classification—A-4

8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2  
26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 3.6 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex, south-facing side slopes of mountains

*Contrasting features:* Very gravelly clay subsoil

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass

#### Inclusion 2

*Position on landscape:* Rock screes on side slopes of mountains

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Crests of lower elevation parts of mountains

*Contrasting features:* Bedrock within a depth of 20 inches

*Distinctive present vegetation:* Black sagebrush, low sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Wiskan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Wiskan Soil for Selected Uses

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Linrose Soil for Selected Uses

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Wiskan soil—VIIIs, nonirrigated; Linrose soil—VIIe, nonirrigated

*Range site:* Wiskan soil—024X031N; Linrose soil—024X042N

## 1220—Boulflat-Havingdon-Dewar association

### Map Unit Setting

*Position on landscape:* Foothills

*Elevation:* 5,000 to 5,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Boulflat gravelly loam, 4 to 30 percent slopes—Haploxerollic Durargids, fine-loamy, mixed, mesic—40 percent
- Havingdon gravelly silt loam, 15 to 30 percent

slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—30 percent

- Dewar cobbly loam, 4 to 30 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Humdun silt loam, 4 to 30 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—5 percent
- Inclusion 2: Rock outcrop—5 percent

### **Characteristics of the Boulflat Soil**

*Position on landscape:* North- and east-facing side slopes of foothills

*Parent material:* Kind—residuum and colluvium influenced by loess; source—chert, shale, and quartzite

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass, bluebunch wheatgrass

### **Typical Profile**

0 to 6 inches—gravelly loam; 25 to 50 percent pebbles (by weight); granular structure; soft, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-4

6 to 23 inches—gravelly clay loam, gravelly loam, gravelly sandy clay loam; 25 to 50 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

23 to 32 inches—strongly cemented duripan; massive  
32 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 20 to 34 inches

*Depth to bedrock:* 22 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.4 to 4.1 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Havingdon Soil**

*Position on landscape:* South- and west-facing side slopes of foothills

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert and shale

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Sandberg bluegrass

### **Typical Profile**

0 to 3 inches—gravelly silt loam; 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-4

3 to 22 inches—very gravelly clay, very gravelly sandy clay, extremely gravelly clay loam; 65 to 85 percent pebbles (by weight); massive; very hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 26 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Dewar Soil**

*Position on landscape:* Interhill fan remnants

*Parent material:* Loess and silty mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, littleleaf horsebrush

### **Typical Profile**

0 to 4 inches—cobbly loam; 15 to 40 percent cobbles and stones and 10 to 20 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/

cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

4 to 14 inches—cobbly silty clay loam; 25 to 30 percent cobbles and stones and 10 to 20 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

14 to 19 inches—very cobbly silt loam; 30 to 40 percent cobbles and stones and 45 to 55 percent pebbles (by weight); subangular blocky structure; hard, firm; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GC; estimated AASHTO classification—A-6

19 to 32 inches or more—indurated duripan; massive; extremely hard, extremely firm

32 to 60 inches or more—gravelly sandy loam; 40 to 50 percent pebbles (by weight); massive; hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to hardpan:* 13 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.4 to 2.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.37; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* North-facing colluvial foot slopes of foothills

*Contrasting features:* Lacks layer of clay accumulation

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, littleleaf horsebrush

#### Inclusion 2

*Position on landscape:* Random small peaks of foothills, ridges, and rimrock

*Contrasting features:* Bedrock exposed at the surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Boulflat soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Havingdon soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Dewar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Boulflat Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope, seepage

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Havingdon Soil for Selected Uses

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Dewar Soil for Selected Uses

*Range seeding:* Fair—large stones, droughty, erodes easily

*Daily cover for landfill:* Poor—cemented pan, slope

*Shallow excavations:* Severe—cemented pan, slope

*Local roads and streets:* Severe—cemented pan, slope

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, cemented pan, slope

*Pond reservoir areas:* Severe—seepage, cemented pan, slope

*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* Boulflat soil—V1e, nonirrigated;

Havingdon soil—VIIe, nonirrigated; Dewar soil—VIIIs, nonirrigated

*Range site:* Boulflat soil—024X005N; Havingdon soil—024X035N; Dewar soil—024X005N

## 1221—Boulflat-Colbar-Old Camp association

### Map Unit Setting

*Position on landscape:* Foothills

*Elevation:* 5,300 to 5,900 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Boulflat gravelly loam, 4 to 15 percent slopes—Haploxerollic Durargids, fine-loamy, mixed, mesic—50 percent
- Colbar gravelly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—20 percent
- Old Camp very cobbly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—7 percent
- Inclusion 2: Typic Camborthids, 8 to 15 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 3: Typic Haplargids, 8 to 15 percent slopes—Typic Haplargids, fine, montmorillonitic, mesic—3 percent

### Characteristics of the Boulflat Soil

*Position on landscape:* Crests and broad side slopes of foothills

*Parent material:* Kind—residuum and colluvium influenced by loess; source—chert

*Slope features:* Length—short; shape—smooth to convex

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, Indian ricegrass, Thurber needlegrass

### Typical Profile

0 to 6 inches—gravelly loam; 25 to 50 percent pebbles (by weight); granular structure; soft, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-4

6 to 23 inches—gravelly clay loam, gravelly loam, gravelly sandy clay loam; 25 to 50 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

23 to 32 inches—strongly cemented duripan; massive

32 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 20 to 34 inches

*Depth to bedrock:* 22 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.4 to 4.1 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Colbar Soil

*Position on landscape:* North- and east-facing side slopes of foothills

*Parent material:* Kind—residuum and colluvium; source—andesite, dacite, and tuff

*Slope features:* Length—long; shape—smooth to concave

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, Indian ricegrass, Thurber needlegrass

### Typical Profile

0 to 3 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC, SM, GM; estimated AASHTO classification—A-4

3 to 22 inches—cobbly loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

22 to 26 inches—gravelly loam, cobbly loam; 5 to 30

percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4 26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.3 to 3.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Old Camp Soil

*Position on landscape:* Several dissected side slope areas of foothills  
*Parent material:* Kind—residuum influenced by volcanic ash; source—basalt and andesite  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, small rabbitbrush

### Typical Profile

0 to 2 inches—very cobbly loam; 25 to 55 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, SM, GM-GC, SM-SC; estimated AASHTO classification—A-4, A-2  
 2 to 14 inches—very stony loam, very cobbly loam, very cobbly clay loam; 35 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6  
 14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.1 to 1.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave drainageways of foothills  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Convex, lower side slopes of foothills and summits of adjacent dissected rock pediment remnants  
*Contrasting features:* Bedrock at a depth of more than 40 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Convex dissected ridges and side slopes of foothills  
*Contrasting features:* Deep soils with a clayey subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Boulflat soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Old Camp soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Boulflat Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty  
*Daily cover for landfill:* Poor—depth to bedrock  
*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Moderate—slope, depth to bedrock, frost action

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Colbar Soil for Selected Uses**

*Range seeding:* Fair—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope, large stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope, small stones

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Old Camp Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope, large stones

*Local roads and streets:* Severe—depth to bedrock, slope, large stones

*Roadfill:* Poor—depth to bedrock, large stones

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones, depth to bedrock

#### **Interpretive Groups**

*Capability classification:* Boulflat soil—IVe, irrigated, and VIs, nonirrigated; Colbar soil—Vle, nonirrigated; Old Camp soil—VIIIs, nonirrigated

*Range site:* Boulflat soil—024X005N; Colbar soil—024X005N; Old Camp soil—024X005N

### **1240—Redflame-Kingingham association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,200 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Redflame very gravelly loam, 4 to 15 percent slopes—Duric Haplargids, loamy-skeletal, mixed, mesic—55 percent

- Kingingham gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Nadurargids, fine montmorillonitic, mesic—30 percent

##### *Contrasting inclusions:*

- Inclusion 1: Duric Natrargids, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—7 percent

- Inclusion 2: Xerollic Haplargids, 2 to 8 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—4 percent

- Inclusion 3: Typic Camborthids, 15 to 30 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—4 percent

#### **Characteristics of the Redflame Soil**

*Position on landscape:* Fan aprons

*Parent material:* Gravelly mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, littleleaf horsebrush

*Surface cover:* 60 percent pebbles, 5 percent cobbles

#### **Typical Profile**

0 to 5 inches—very gravelly loam; 0 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC, GM; estimated AASHTO classification—A-2

5 to 14 inches—very gravelly clay loam, very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GC; estimated AASHTO classification—A-2

14 to 60 inches or more—very gravelly sandy loam; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* In the upper 14 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 2.7 to 4.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Kingingham Soil**

*Position on landscape:* Summits of nonburied fan piedmont remnants  
*Parent material:* Thin loess mantle over mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4  
 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7  
 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 3.5 to 4.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow to medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower fan piedmont remnants  
*Contrasting features:* Silty clay loam subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Side slopes of fan piedmont remnants adjacent to deep channels  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 3**

*Position on landscape:* Inset fans  
*Contrasting features:* Slopes of 15 to 30 percent  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Redflame soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Kingingham soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Redflame Soil for Selected Uses**

*Range seeding:* Poor—too arid, small stones  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—slope  
*Local roads and streets:* Moderate—slope  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Seepage, slope  
*Embankments, dikes, and levees:* Slight

#### **Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium  
*Daily cover for landfill:* Poor—cemented pan, hard to pack  
*Shallow excavations:* Severe—cemented pan  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Poor—cemented pan, low strength, shrink-swell  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, too clayey  
*Pond reservoir areas:* Moderate—cemented pan, slope  
*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

### **Interpretive Groups**

*Capability classification:* Redflame soil—VIIIs, nonirrigated; Kingingham soil—VIIIs, nonirrigated  
*Range site:* Redflame soil—024X002N; Kingingham soil—024X002N

## **1263—Graley-Loncan-Bregar association**

### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 6,700 to 7,400 feet  
*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free season:* About 90 days

### **Composition**

#### *Major components:*

- Graley very gravelly sandy loam, 30 to 50 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—40 percent
- Loncan gravelly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—25 percent
- Bregar extremely gravelly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Glean gravelly silt loam, 30 to 75 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—7 percent
- Inclusion 2: Wiskan very gravelly silt loam, 30 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—6 percent
- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Graley Soil**

*Position on landscape:* South- and west-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—quartzite  
*Slope features:* Length—long; shape—concave to convex  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass  
*Surface cover:* 30 percent pebbles, 5 percent cobbles

### **Typical Profile**

0 to 7 inches—very gravelly sandy loam; 0 to 5 percent cobbles and stones and 50 to 75 percent pebbles

(by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1

7 to 14 inches—very gravelly clay, very gravelly clay loam; 0 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

14 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.3 to 1.8 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—Low  
*Potential frost action:* Moderate

### **Characteristics of the Loncan Soil**

*Position on landscape:* North- and east-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—volcanic rocks and sedimentary rocks  
*Slope features:* Length—long; shape—concave to convex  
*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, snowberry

### **Typical Profile**

0 to 14 inches—gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); granular structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6

14 to 31 inches—very gravelly loam, extremely cobbly loam, very gravelly sandy clay loam; 10 to 45 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified

classification—GC; estimated AASHTO  
classification—A-2

31 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 21 to 38 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.3 to 3.8 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—  
2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Bregar Soil

*Position on landscape:* Crests of mountains

*Parent material:* Kind—residuum; source—extrusive  
volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, low  
sagebrush, bluebunch wheatgrass

### Typical Profile

0 to 4 inches—extremely gravelly loam; 10 to 20  
percent cobbles and stones and 70 to 80 percent  
pebbles (by weight); platy structure; soft, very  
friable; mildly alkaline (pH 7.4); nonsaline (less than  
2 mmhos/cm); nonsodic (SAR less than 2);  
estimated Unified classification—GM-GC, GC;  
estimated AASHTO classification—A-2

4 to 11 inches—very gravelly clay loam, very cobbly  
sandy clay loam, extremely gravelly sandy clay  
loam; 5 to 45 percent cobbles and stones and 65 to  
75 percent pebbles (by weight); angular blocky  
structure; slightly hard, very friable; mildly alkaline  
(pH 7.4); nonsaline (less than 2 mmhos/cm);  
nonsodic (SAR less than 2); estimated Unified  
classification—GC; estimated AASHTO  
classification—A-2

11 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 5 to 12 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.9 to 1.2 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—  
1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave, north-facing back  
slopes of mountains

*Contrasting features:* Higher water-supplying capacity

*Distinctive present vegetation:* Idaho fescue, mountain  
big sagebrush

#### Inclusion 2

*Position on landscape:* Convex protected crests of  
mountains

*Contrasting features:* Bedrock at a depth of 20 to 40  
inches

*Distinctive present vegetation:* Black sagebrush,  
bluebunch wheatgrass

#### Inclusion 3

*Position on landscape:* Random small peaks, ridges,  
and rimrock of mountains

*Contrasting features:* Bedrock exposed at the soil  
surface

*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Graley soil for named elements:* Wild  
herbaceous plants (nonirrigated)—fair; shrubs  
(nonirrigated)—fair

*Suitability of the Loncan soil for named elements:* Wild  
herbaceous plants (nonirrigated)—fair; shrubs  
(nonirrigated)—fair

*Suitability of the Bregar soil for named elements:* Wild  
herbaceous plants (nonirrigated)—fair; shrubs  
(nonirrigated)—fair

#### Ratings of the Graley Soil for Selected Uses

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small  
stones, too clayey

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock,  
slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, depth to bedrock, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Loncan Soil for Selected Uses**

*Range seeding:* Fair—droughty, erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer, large stones

#### **Ratings of the Bregar Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, depth to bedrock

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Graley soil—VIIe, nonirrigated;  
 Loncan soil—VIIe, nonirrigated; Bregar soil—VIIs,  
 nonirrigated

*Range site:* Graley soil—024X029N; Loncan soil—  
 024X021N; Bregar soil—024X016N

### **1280—Ricert-Oxcorel-Whirlo association**

#### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 5,000 to 5,300 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Ricert gravelly fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—55 percent
- Oxcorel gravelly fine sandy loam, 2 to 8 percent

slopes—Duric Natrargids, fine, montmorillonitic, mesic—20 percent

• Whirlo gravelly loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—15 percent  
*Contrasting inclusions:*

• Inclusion 1: Xerollic Camborthids, 0 to 2 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—7 percent

• Inclusion 2: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, fine-loamy, mixed, mesic—3 percent

#### **Characteristics of the Ricert Soil**

*Position on landscape:* Summits and side slopes of lower fan piedmont remnants

*Parent material:* Mixed alluvium with a thin loess mantle

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 6 inches—gravelly fine sandy loam; 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, SM; estimated AASHTO classification—A-4, A-2

6 to 18 inches—loam, clay loam; 0 to 15 percent pebbles (by weight); prismatic structure; slightly hard, friable; strongly alkaline (pH 8.5); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

18 to 60 inches or more—very gravelly sandy loam, very gravelly loamy sand, extremely gravelly loamy sand; 0 to 15 percent cobbles and stones and 50 to 80 percent pebbles (by weight); massive; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 18 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 4.4 to 6.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Slightly dissected summits of higher fan piedmont remnants  
*Parent material:* Loess over mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—gravelly fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4, A-2  
 5 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7  
 36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 4.8 to 6.7 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans and fan skirts  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; smooth to slightly convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, rabbitbrush

### **Typical Profile**

0 to 12 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4  
 12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1  
 24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.7 to 5.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper parts of inset fans and adjacent to channels  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, small rabbitbrush

**Inclusion 2**

*Position on landscape:* Smooth to slightly convex fan aprons

*Contrasting features:* Lacks sodium-affected layer, receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Ricert soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Ricert Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess sodium, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

**Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—excess sodium

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

**Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

**Interpretive Groups**

*Capability classification:* Ricert soil—IVe, irrigated, and VIIs, nonirrigated; Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated; Whirlo soil—IIe, irrigated, and VIIc, nonirrigated

*Range site:* Ricert soil—024X002N; Oxcorel soil—024X002N; Whirlo soil—024X002N

**1281—Ricert-Whirlo-Pineval association****Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 4,900 to 6,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition****Major components:**

- Ricert gravelly silt loam, 4 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—45 percent
- Whirlo fine sandy loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—25 percent
- Pineval gravelly fine sandy loam, 4 to 8 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—15 percent

**Contrasting inclusions:**

- Inclusion 1: Duric Natrargids, 4 to 15 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—9 percent
- Inclusion 2: Xeric Torriorthents, 15 to 30 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—4 percent
- Inclusion 3: Typic Nadurargids, 4 to 15 percent slopes—Typic Nadurargids, fine-loamy, mixed, mesic—2 percent

**Characteristics of the Ricert Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Mixed alluvium with a thin loess mantle

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, cheatgrass

*Surface cover:* 30 percent pebbles, 5 percent cobbles

**Typical Profile**

- 0 to 6 inches—gravelly silt loam; 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4
- 6 to 18 inches—loam, clay loam; 0 to 15 percent pebbles (by weight); prismatic structure; slightly hard, friable; strongly alkaline (pH 8.5); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 18 to 60 inches or more—very gravelly sandy loam, very gravelly loamy sand, extremely gravelly loamy sand; 0 to 15 percent cobbles and stones and 50 to 80 percent pebbles (by weight); massive; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 18 inches—moderately slow; below this depth—moderately rapid  
*Available water capacity:* 4.4 to 6.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

**Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fan remnants and fan skirts  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Typical Profile**

- 0 to 12 inches—fine sandy loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4

- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 15 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.8 to 6.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

**Characteristics of the Pineval Soil**

*Position on landscape:* Upper summits of fan piedmont remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

**Typical Profile**

- 0 to 5 inches—gravelly fine sandy loam; 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2
- 5 to 11 inches—very gravelly loam, very gravelly clay loam; 50 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

11 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly sand; 0 to 25 percent cobbles and stones and 50 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.0 to 4.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex upper margins of fan piedmont remnants  
*Contrasting features:* Clayey, sodium-affected subsoil  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 2

*Position on landscape:* Convex side slopes of fan piedmont remnants  
*Contrasting features:* Slopes of 15 to 30 percent  
*Distinctive present vegetation:* Wyoming big sagebrush, shadscale

#### Inclusion 3

*Position on landscape:* Shoulder slopes of upper fan piedmont remnants  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Ricert soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Whirlo soil for named elements:* Wild

herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Pineval soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Ricert Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Ratings of the Whirlo Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### Ratings of the Pineval Soil for Selected Uses

*Range seeding:* Fair—too arid, droughty, small stones

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—area reclaim, small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage

### Interpretive Groups

*Capability classification:* Ricert soil—IVe, irrigated, and VIIs, nonirrigated; Whirlo soil—IIIe, irrigated, and VIIc, nonirrigated; Pineval soil—IVe, irrigated, and VI, nonirrigated

*Range site:* Ricert soil—024X002N; Whirlo soil—024X002N; Pineval soil—028B010N

## 1283—Ricert-Kingingham-Oxcorel association

### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 4,700 to 5,200 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 50 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Ricert very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—45 percent
  - Kingingham sandy loam, 2 to 4 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—20 percent
  - Oxcorel silt loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—6 percent
  - Inclusion 2: Duric Natrargids, 0 to 2 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—6 percent
  - Inclusion 3: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—3 percent

### Characteristics of the Ricert Soil

*Position on landscape:* Shoulders and upper side slopes of fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—short; shape—smooth to slightly concave

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 6 inches—very fine sandy loam; 0 to 10 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML, CL-ML; estimated AASHTO classification—A-4
- 6 to 18 inches—loam, clay loam; 0 to 15 percent pebbles (by weight); prismatic structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7
- 18 to 60 inches or more—very gravelly sandy loam, very gravelly loamy sand, extremely gravelly loamy sand; 0 to 15 percent cobbles and stones and 50 to

80 percent pebbles (by weight); massive; very hard, very firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 18 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 4.5 to 6.6 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Characteristics of the Kingingham Soil

*Position on landscape:* Upper summits of fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 7 inches—sandy loam; 0 to 5 percent cobbles and stones and 5 to 25 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-2
- 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 15 to 30); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7
- 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### Soil and Water Features

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.6 to 4.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow to medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.1 to 7.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Smooth inset fans and adjacent fan skirts

*Contrasting features:* Loamy, coarse textured throughout the profile

*Distinctive present vegetation:* Shadscale

#### **Inclusion 2**

*Position on landscape:* Foot slopes of fan piedmont remnants

*Contrasting features:* A strongly saline-sodic surface

*Distinctive present vegetation:* Shadscale, bud sagebrush, black greasewood

#### **Inclusion 3**

*Position on landscape:* Areas adjacent to active stream channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Ricert soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Kingingham soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Ricert Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

**Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess salt

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, too clayey

*Pond reservoir areas:* Moderate—cemented pan, slope

*Embankments, dikes, and levees:* Severe—excess sodium, thin layer

**Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

**Interpretive Groups**

*Capability classification:* Ricert soil—IVe, irrigated, and VIIs, nonirrigated; Kingingham soil—VIIs, nonirrigated; Oxcorel soil—VIIs, nonirrigated

*Range site:* Ricert soil—024X002N; Kingingham soil—024X002N; Oxcorel soil—024X002N

**1291—Kingingham-Tenabo-Sodhouse association****Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,300 to 5,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Kingingham gravelly very fine sandy loam, 2 to 4 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—40 percent
- Tenabo very fine sandy loam, 2 to 4 percent slopes—

Typic Nadurargids, loamy, mixed, mesic, shallow—30 percent

- Sodhouse gravelly very fine sandy loam, 4 to 8 percent slopes—Typic Durorthids, loamy, mixed, mesic, shallow—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Torriorthents, 15 to 30 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—7 percent

- Inclusion 2: Durixerollic Haplargids, 2 to 4 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—6 percent

- Inclusion 3: Xerollic Camborthids, 2 to 4 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—2 percent

**Characteristics of the Kingingham Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Mixed alluvium with a thin loess mantle

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Typical Profile**

0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 40 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 15 to 35); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7

22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

**Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.5 to 4.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Tenabo Soil**

*Position on landscape:* Upper summits of fan piedmont remnants  
*Parent material:* Mixed alluvium with a thin loess mantle high in volcanic ash  
*Slope features:* Length—short; shape—slightly convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 6 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4  
 6 to 18 inches—clay loam, gravelly clay loam, silty clay loam; 5 to 30 percent pebbles (by weight); prismatic structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 18 to 40 inches—indurated duripan; massive; extremely hard, extremely firm  
 40 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly coarse sand; 5 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); single grained; loose; very strongly alkaline (pH 9.2); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 9 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.8 to 4.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.55; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Sodhouse Soil**

*Position on landscape:* Upper shoulder slopes of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, small rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

0 to 3 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 5 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4, A-2  
 3 to 17 inches—fine sandy loam, loam, very fine sandy loam; 10 to 25 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4  
 17 to 29 inches—indurated duripan; massive  
 29 to 60 inches or more—extremely gravelly sandy loam, very gravelly loamy sand; 5 to 20 percent cobbles and stones and 50 to 85 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.1 to 2.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Eroded escarpments of fan piedmont remnants adjacent to inset fans

*Contrasting features:* Very deep soils, lacks duripan  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Concave side slopes of fan piedmont remnants

*Contrasting features:* Very deep soils with a very gravelly subsoil

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Kingingham soil for named elements:*

Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Tenabo soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Sodhouse soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—excess salt, too clayey, small stones

*Pond reservoir areas:* Moderate—cemented pan, slope

*Embankments, dikes, and levees:* Severe—excess sodium, thin layer

#### **Ratings of the Tenabo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, too sandy

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—too sandy, cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—excess sodium, seepage, excess salt

#### **Ratings of the Sodhouse Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, small stones

*Shallow excavations:* Severe—cemented pan, cutbanks cave

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—cemented pan, small stones, area reclaim

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Kingingham soil—VIIIs, nonirrigated; Tenabo soil—IVe, irrigated, and VIIIs, nonirrigated; Sodhouse soil—VIIIs, nonirrigated

*Range site:* Kingingham soil—024X002N; Tenabo soil—024X002N; Sodhouse soil—024X002N

## **1292—Kingingham-Golconda-Whirlo association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,900 to 5,600 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Kingingham gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—45 percent
- Golconda gravelly very fine sandy loam, 2 to 8 percent slopes—Haplic Nadurargids, fine-loamy, mixed, mesic—20 percent

- Whirlo gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Nadurargids, 8 to 15 percent slopes—Typic Nadurargids, clayey-skeletal, montmorillonitic, mesic—7 percent

- Inclusion 2: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—6 percent
- Inclusion 3: Broyles very fine sandy loam, 2 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—2 percent

### **Characteristics of the Kingingham Soil**

*Position on landscape:* Upper summits, shoulders, and side slopes of fan piedmont remnants

*Parent material:* A thin loess mantle over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

*Surface cover:* 20 percent pebbles

### **Typical Profile**

- 0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4
- 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 40); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7
- 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.5 to 4.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow to medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Golconda Soil**

*Position on landscape:* Lower summits and side slopes of fan piedmont remnants

*Parent material:* Loess influenced by volcanic ash over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 10 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4
- 10 to 23 inches—clay loam, gravelly clay loam, silty clay loam; 10 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (16 to 30 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6, A-7
- 23 to 36 inches—strongly cemented duripan; massive; very hard, very firm
- 36 to 60 inches or more—stratified very gravelly loamy coarse sand to very gravelly sandy loam; 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 4.2 to 5.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans and fan aprons

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

**Typical Profile**

0 to 12 inches—gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); platy; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.8 to 5.2 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Concave, slightly dissected side slopes of fan piedmont remnants

*Contrasting features:* Sodium-affected layer of clay accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 2**

*Position on landscape:* Concave upper inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

**Inclusion 3**

*Position on landscape:* Slightly convex adjacent fan skirts

*Contrasting features:* Fine sandy loam throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Kingingham soil for named elements:*

Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Golconda soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess salt

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, too clayey

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

**Ratings of the Golconda Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—cemented pan, seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—cemented pan, seepage

*Embankments, dikes, and levees:* Severe—excess sodium, seepage, excess salt

**Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones  
*Shallow excavations:* Slight  
*Local roads and streets:* Slight  
*Roadfill:* Good  
*Sand:* Probable source  
*Gravel:* Probable source  
*Topsoil:* Poor—small stones, area reclaim, excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Kingingham soil—VIIIs, nonirrigated; Golconda soil—IVe, irrigated, and VIIIs, nonirrigated; Whirlo soil—IIIe, irrigated, and VIIC, nonirrigated  
*Range site:* Kingingham soil—024X002N; Golconda soil—024X002N; Whirlo soil—024X002N

## **1293—Kingingham-Oxcorel association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts  
*Elevation:* 4,500 to 5,500 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Kingingham gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—55 percent
- Oxcorel gravelly fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—30 percent

#### *Contrasting inclusions:*

- Inclusion 1: Durixerollic Haplargids, 2 to 8 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—6 percent
- Inclusion 2: Xeric Torriorthents, 2 to 4 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 3: Durorthidic Torriorthents, 2 to 8 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—4 percent

### **Characteristics of the Kingingham Soil**

*Position on landscape:* Upper summits of fan piedmont remnants  
*Parent material:* Loess over mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4  
 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 40 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 15 to 30); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7  
 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 3.5 to 4.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Lower summits of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—gravelly fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, SC, GM-GC; estimated AASHTO classification—A-4, A-2  
 5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles

and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 4.8 to 6.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave fan aprons

*Contrasting features:* Lacks a duripan

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Concave inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Inset fan remnants

*Contrasting features:* Loamy and very gravelly throughout the profile

*Distinctive present vegetation:* Shadscale

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Kingingham soil for named elements:*

Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

### Ratings of the Kingingham Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess salt

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, too clayey

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Interpretive Groups

*Capability classification:* Kingingham soil—VIIIs, nonirrigated; Oxcorel soil—IVe, irrigated, and VIIIs, nonirrigated

*Range site:* Kingingham soil—024X002N; Oxcorel soil—024X002N

## 1294—Kingingham-Whirlo-Beoska association

### Map Unit Setting

*Position on landscape:* Piedmont slopes

*Elevation:* 4,500 to 5,700 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Kingingham gravelly very fine sandy loam, 2 to 4 percent slopes—Typic Nadurargids, fine, montmorillonitic, mesic—40 percent
- Whirlo fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—25 percent
- Beoska gravelly very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—20 percent

#### Contrasting inclusions:

- Inclusion 1: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—9 percent
- Inclusion 2: Creemon very gravelly fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-silty, mixed, mesic—3 percent
- Inclusion 3: Durixerollic Haplargids, 2 to 4 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—3 percent

### Characteristics of the Kingingham Soil

*Position on landscape:* Upper summits of fan piedmont remnants

*Parent material:* Thin loess mantle over mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush

#### Typical Profile

- 0 to 7 inches—gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4
- 7 to 22 inches—gravelly clay loam, gravelly clay, gravelly silty clay loam; 0 to 5 percent cobbles and stones and 30 to 40 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly to moderately sodic (SAR 20 to 46); estimated Unified classification—CL, CH, GC; estimated AASHTO classification—A-7
- 22 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

#### Soil and Water Features

*Depth to hardpan:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 3.5 to 4.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### Characteristics of the Whirlo Soil

*Position on landscape:* Fan skirts and lower inset fans

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush

#### Typical Profile

- 0 to 12 inches—fine sandy loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, SM; estimated AASHTO classification—A-4
- 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

#### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.9 to 6.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess mantled mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush

#### **Typical Profile**

0 to 13 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4

13 to 24 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

24 to 55 inches—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); strongly saline (16 to 30 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

55 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 24 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.0 to 8.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper inset fans and fan aprons

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Lower margins of fan skirts

*Contrasting features:* Silty throughout the profile

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Fan drainageways

*Contrasting features:* Receives additional moisture from runoff and flash flooding

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Kingingham soil for named elements:*

Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Kingingham Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess salt

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—cemented pan, low strength, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, too clayey

*Pond reservoir areas:* Moderate—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer, excess sodium

#### **Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

#### **Interpretive Groups**

*Capability classification:* Kingingham soil—VIIIs, nonirrigated; Whirlo soil—IIc, irrigated, and VIIc, nonirrigated; Beoska soil—IIIe, irrigated, and VIIs, nonirrigated

*Range site:* Kingingham soil—024X002N; Whirlo soil—024X002N; Beoska soil—024X002N

### **1342—Doowak, cobbly-Doowak-Veta association**

#### **Map Unit Setting**

*Position on landscape:* Inset fans

*Elevation:* 4,900 to 5,500 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

##### **Major components:**

- Doowak cobbly sandy loam, 0 to 2 percent slopes, occasionally flooded—Xeric Torriorthents, sandy-skeletal, mixed, mesic—30 percent
- Doowak very gravelly loamy sand, 0 to 2 percent slopes—Xeric Torriorthents, sandy-skeletal, mixed, mesic—30 percent
- Veta gravelly sandy loam, 0 to 2 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—30 percent

##### **Contrasting inclusions:**

- Inclusion 1: Xeric Torriorthents, 8 to 30 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 2: Xerollic Camborthids, 0 to 2 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

#### **Characteristics of the Doowak, Cobbly, Soil**

*Position on landscape:* Inset fans adjacent to channels

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Typical Profile**

0 to 6 inches—cobbly sandy loam; 15 to 25 percent cobbles and stones and 15 to 30 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-2

6 to 60 inches or more—stratified extremely gravelly sand to extremely gravelly loamy sand; 0 to 5 percent cobbles and stones and 75 to 90 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Flooding:* Frequency—occasional; duration—very brief; months—February through June

*Permeability:* Very rapid

*Available water capacity:* 2.2 to 3.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* A

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Doowak Soil**

*Position on landscape:* Lower inset fan remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 6 inches—very gravelly loamy sand; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2);

estimated Unified classification—GM, GP-GM;  
estimated AASHTO classification—A-1

6 to 60 inches or more—stratified extremely gravelly sand to extremely gravelly loamy sand; 5 to 10 percent cobbles and stones and 75 to 90 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very rapid  
*Available water capacity:* 1.9 to 3.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

#### **Characteristics of the Veta Soil**

*Position on landscape:* Upper inset fan remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

#### **Typical Profile**

0 to 4 inches—gravelly sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-1, A-2  
4 to 20 inches—very gravelly sandy loam, extremely gravelly loam; 10 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
20 to 60 inches or more—stratified extremely gravelly loamy sand to very gravelly loam; 10 to 25 percent cobbles and stones and 50 to 80 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/

cm); nonsodic (SAR less than 5); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderately rapid  
*Available water capacity:* 2.5 to 5.0 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Side slopes of inset fan remnants  
*Contrasting features:* Slopes of 8 to 30 percent  
*Distinctive present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass

##### **Inclusion 2**

*Position on landscape:* Fanlettes from adjacent fan piedmonts  
*Contrasting features:* Subject to flash flooding  
*Distinctive present vegetation:* Wyoming big sagebrush

#### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Doowak, cobbly, soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Doowak soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Veta soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Doowak, Cobbly, Soil for Selected Uses**

*Range seeding:* Poor—droughty  
*Daily cover for landfill:* Poor—seepage, too sandy, small stones  
*Shallow excavations:* Severe—cutbanks cave  
*Local roads and streets:* Severe—flooding  
*Roadfill:* Good  
*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Doowak Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Veta Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding, frost action

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Doowak, cobbly, soil—VIIw, nonirrigated; Doowak soil—VIIs, nonirrigated; Veta soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Doowak, cobbly, soil—024X041N; Doowak soil—024X020N; Veta soil—024X005N

### **1392—Rock outcrop-Loncan Variant-Glean association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,500 to 8,000 feet

*Average annual precipitation:* About 13 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 80 days

#### **Composition**

*Major components:*

- Rock outcrop—40 percent
- Loncan Variant gravelly silt loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—25 percent
- Glean gravelly sandy loam, 30 to 50 percent slopes—

Pachic Haploxerolls, loamy-skeletal, mixed, frigid—20 percent

*Contrasting inclusions:*

• Inclusion 1: Lithic Haploxerolls, 30 to 50 percent slopes—Lithic Haploxerolls, sandy-skeletal, mixed, frigid—10 percent

• Inclusion 2: Lithic Haploxerolls, 50 to 75 percent slopes—Lithic Haploxerolls, loamy-skeletal, mixed, frigid—3 percent

• Inclusion 3: Cleavage extremely gravelly silt loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—2 percent

#### **Characteristics of Rock Outcrop**

*Position on landscape:* Rimrock on crests and peaks of mountains

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* None

#### **Characteristics of the Loncan Variant Soil**

*Position on landscape:* Side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—chert

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Singleleaf pinyon, Utah juniper, black sagebrush

#### **Typical Profile**

0 to 12 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, SM, ML; estimated AASHTO classification—A-4

12 to 32 inches—very gravelly loam, extremely gravelly sandy loam; 10 to 15 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2

32 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 3.1 to 5.0 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Glean Soil**

*Position on landscape:* Back slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—various kinds of rock  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Idaho fescue, mountain big sagebrush

### **Typical Profile**

0 to 6 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4  
 6 to 49 inches—very gravelly loam, very gravelly sandy loam; 0 to 25 percent cobbles and stones and 40 to 75 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
 49 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.1 to 5.0 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.15; T value—3; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Shoulders below peaks of mountains  
*Contrasting features:* Shallow to bedrock

*Distinctive present vegetation:* Singleleaf pinyon, mountain big sagebrush, bluegrass

#### **Inclusion 2**

*Position on landscape:* Shoulders below rimrock of mountains  
*Contrasting features:* Slopes of 50 to 75 percent  
*Distinctive present vegetation:* Black sagebrush, Idaho fescue

#### **Inclusion 3**

*Position on landscape:* Crests of mountains  
*Contrasting features:* Bedrock within a depth of 20 inches  
*Distinctive present vegetation:* Low sagebrush, black sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat  
*Site index for common trees on the Loncan Variant Soil:* Singleleaf pinyon—40; Utah Juniper—40  
*Most important native understory plants:* Black sagebrush, bluegrass

#### **Wildlife habitat elements:**

*Suitability of the Loncan Variant soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair;  
 coniferous plants (nonirrigated)—poor; shrubs (nonirrigated)—fair  
*Suitability of the Glean soil for named elements:* Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

#### **Ratings of the Loncan Variant Soil for Selected Uses**

*Range seeding:* Poor—small stones, erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Glean Soil for Selected Uses**

*Range seeding:* Fair—droughty, erodes easily  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, slope  
*Pond reservoir areas:* Severe—slope, seepage  
*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Rock outcrop—VIIIs; Loncan Variant soil—VIIIs, nonirrigated; Glean soil—VIIe, nonirrigated

*Range site:* Loncan Variant soil—025X063; Glean soil—024X023N

*Woodland suitability group:* Loncan Variant soil—1r

## **1400—Koyunik, steep-Koyunik-Rock outcrop association**

### **Map Unit Setting**

*Position on landscape:* Low mountains and foothills

*Elevation:* 4,900 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Koyunik very cobbly very fine sandy loam, 30 to 50 percent slopes—Lithic Torriorthents, loamy-skeletal, carbonatic, mesic—40 percent
- Koyunik very gravelly very fine sandy loam, 15 to 30 percent slopes—Lithic Torriorthents, loamy-skeletal, carbonatic, mesic—30 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 8 to 30 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—8 percent
- Inclusion 2: Lithic Haplargids, 15 to 50 percent slopes—Lithic Haplargids, loamy, mixed, mesic—4 percent
- Inclusion 3: Typic Durorthids, 15 to 30 percent slopes—Typic Durorthids, loamy-skeletal, mixed, mesic—3 percent

### **Characteristics of the Koyunik, Steep, Soil**

*Position on landscape:* Side slopes of low mountains and foothills

*Parent material:* Kind—residuum; source—limestone and dolomite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, ephedra, little rabbitbrush, Sandberg bluegrass

*Surface cover:* 40 percent pebbles, 10 percent cobbles

### **Typical Profile**

0 to 6 inches—very cobbly very fine sandy loam; 45 to 60 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly

hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, SM; estimated AASHTO classification—A-2  
6 to 8 inches—very gravelly loam, very gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC, GC, SC; estimated AASHTO classification—A-2  
8 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 0.6 to 0.7 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Koyunik Soil**

*Position on landscape:* Crests and shoulder slopes of low mountains and foothills

*Parent material:* Kind—residuum; source—limestone and dolomite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, Sandberg bluegrass

### **Typical Profile**

0 to 6 inches—very gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, SM, GM-GC, GM; estimated AASHTO classification—A-1, A-2

6 to 8 inches—very gravelly loam, very gravelly very fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm);

nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC, GC, SC; estimated AASHTO classification—A-2  
8 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 8 to 14 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.6 to 0.7 inches  
*Water-supplying capacity:* 6 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of Rock Outcrop

*Position on landscape:* Multiple ledges and locally exposed broad bedding planes on low mountains and foothills  
*Slope features:* Length—short; shape—concave to convex  
*Dominant present vegetation:* None

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Irregular to concave, north-facing side slopes and foot slopes of foothills  
*Contrasting features:* Bedrock at a depth of more than 20 inches  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Convex, shale bedrock side slope areas of foothills  
*Contrasting features:* Thin layer of clay accumulation above the bedrock  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### Inclusion 3

*Position on landscape:* Stable random areas on foothills  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Koynik, steep, soil for named elements:*  
Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Koynik soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings of the Koynik, Steep, Soil for Selected Uses

*Range seeding:* Poor—too arid, droughty, large stones  
*Daily cover for landfill:* Poor—depth to bedrock, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—large stones, thin layer

### Ratings of the Koynik Soil for Selected Uses

*Range seeding:* Poor—too arid, droughty, small stones  
*Daily cover for landfill:* Poor—depth to bedrock, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Koynik, steep, soil—VIIIs, nonirrigated; Koynik soil—VIIIs, nonirrigated; Rock outcrop—VIIIs  
*Range site:* Koynik, steep, soil—024X002N; Koynik soil—024X002N

## 1410—Bojo-Stingdorn association

### Map Unit Setting

*Position on landscape:* Foothills  
*Elevation:* 5,000 to 6,000 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 90 days

### Composition

*Major components:*

- Bojo fine sandy loam, 8 to 30 percent slopes,

extremely stony—Lithic Haplargids, loamy, mixed, mesic—55 percent

- Stingdorn gravelly loam, 4 to 15 percent slopes—Typic Durargids, loamy-skeletal, mixed, mesic, shallow—30 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—7 percent
- Inclusion 2: Typic Durorthids, 2 to 8 percent slopes—Typic Durorthids, loamy, mixed, mesic, shallow—4 percent
- Inclusion 3: Durixerollic Camborthids, 4 to 15 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—4 percent

### **Characteristics of the Bojo Soil**

*Position on landscape:* Higher elevation crests and side slopes of foothills

*Parent material:* Kind—residuum; source—volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, little rabbitbrush, littleleaf horsebrush, bottlebrush squirreltail

*Rock fragments on surface:* Kind—stones; percentage of surface covered—5

### **Typical Profile**

0 to 4 inches—fine sandy loam; 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-2, A-4

4 to 10 inches—sandy clay loam, clay loam; 0 to 5 percent cobbles and stones and 10 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-6

10 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 7 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.3 to 1.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium to rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Stingdorn Soil**

*Position on landscape:* Broad, stable crests and lower elevation side slopes of foothills

*Parent material:* Kind—residuum; source—rhyolitic tuffs

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—gravelly loam; 5 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2, A-4

7 to 15 inches—very cobbly clay loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC; estimated AASHTO classification—A-6

15 to 20 inches—indurated duripan

20 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 8 to 20 inches

*Depth to bedrock:* 8 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Broad, locally exposed bedrock rims of foothills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

**Inclusion 2**

*Position on landscape:* Smooth summits of foothills

*Contrasting features:* Lacks a layer of clay accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

**Inclusion 3**

*Position on landscape:* Concave drainageways of foothills

*Contrasting features:* Very deep soils, receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Bojo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Stingdorn soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Bojo Soil for Selected Uses**

*Range seeding:* Too arid, droughty, rooting depth

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Stingdorn Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, large stones

*Shallow excavations:* Severe—depth to bedrock, cemented pan

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, large stones, cemented pan

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Bojo soil—VIIs, nonirrigated; Stingdorn soil—VIIs, nonirrigated

*Range site:* Bojo soil—024X020N; Stingdorn soil—024X002N

**1411—Bojo-Rock outcrop-Osoll association****Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,000 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Bojo gravelly sandy loam, 15 to 75 percent slopes, rubbly—Lithic Haplargids, loamy, mixed, mesic—50 percent

- Rock outcrop—20 percent

- Osoll gravelly loam, 15 to 30 percent slopes—Typic Durorthids, loamy-skeletal, mixed, mesic, shallow—15 percent

*Contrasting inclusions:*

- Inclusion 1: Duric Natrargids, 8 to 15 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—6 percent

- Inclusion 2: Duric Camborthids, 15 to 30 percent slopes—Duric Camborthids, loamy-skeletal, mixed, mesic—6 percent

- Inclusion 3: Colbar very gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—3 percent

**Characteristics of the Bojo Soil**

*Position on landscape:* Side slopes of foothills

*Parent material:* Kind—residuum; source—volcanic rock

*Slope features:* Length—long; shape—irregularly shaped

*Dominant present vegetation:* Wyoming big sagebrush, little rabbitbrush, bottlebrush squirreltail, Sandberg bluegrass

*Rock fragments on surface:* Kind—stones; percentage of surface covered—5

**Typical Profile**

0 to 4 inches—gravelly sandy loam; 25 to 40 percent cobbles and stones and 20 to 35 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

4 to 10 inches—sandy clay loam, clay loam; 0 to 5 percent cobbles and stones and 10 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH

8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-6

10 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 7 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—4

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of Rock Outcrop**

*Position on landscape:* Steep cliffs on upper side slopes of foothills

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* None

### **Characteristics of the Osoll Soil**

*Position on landscape:* Predominantly south- and west-facing, lower, colluvial side slopes of foothills

*Parent material:* Kind—residuum and colluvium; source—tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, CL-ML; estimated AASHTO classification—A-4

5 to 12 inches—very gravelly loam, very gravelly fine sandy loam; 10 to 25 percent cobbles and stones and 50 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

12 to 35 inches—indurated duripan; platy structure; extremely hard, extremely firm

35 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 8 to 14 inches

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 0.9 to 1.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly convex, lower side slopes and foot slopes of foothills

*Contrasting features:* Deep soil that has a sodium-affected subsoil layer

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Slightly convex, south-facing, lower side slopes and foot slopes of foothills

*Contrasting features:* Very deep

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 3**

*Position on landscape:* Convex, north-facing, lower side slopes of foothills

*Contrasting features:* Bedrock at a depth of 20 to 40 inches

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Bojo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Osoll soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Bojo Soil for Selected Uses**

*Range seeding:* Too arid, droughty, rooting depth

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Osoll Soil for Selected Uses**

*Range seeding:* Poor—too arid, erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, cemented pan, slope  
*Local roads and streets:* Severe—slope, cemented pan  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope, cemented pan  
*Pond reservoir areas:* Severe—slope, cemented pan  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Bojo soil—VIIIs, nonirrigated;  
 Rock outcrop VIIIs; Osoll soil—VIIe, nonirrigated  
*Range site:* Bojo soil—024X020N; Osoll soil—024X002N

### **1412—Bojo-Humdun-Boulflat association**

#### **Map Unit Setting**

*Position on landscape:* Foothills  
*Elevation:* 4,800 to 5,500 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

- Bojo very gravelly loam, 30 to 50 percent slopes—Lithic Haplargids, loamy, mixed, mesic—40 percent
- Humdun silt loam, gravelly substratum, 15 to 50 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, frigid—30 percent
- Boulflat gravelly loam, 15 to 30 percent slopes—Haploxerollic Durargids, fine-loamy, mixed, mesic—20 percent

##### *Contrasting inclusions:*

- Inclusion 1: Havingdon gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—5 percent
- Inclusion 2: Xeric Torriorthents, 15 to 30 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent
- Inclusion 3: Xerollic Haplargids, 2 to 8 percent

slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—1 percent

#### **Characteristics of the Bojo Soil**

*Position on landscape:* South-facing side slopes of foothills

*Parent material:* Kind—residuum; source—volcanic rock

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, Wyoming big sagebrush, bottlebrush squirreltail

*Rock fragments on surface:* Kind—stones; percentage of surface covered—5

#### **Typical Profile**

0 to 5 inches—very gravelly loam; 10 to 25 percent cobbles and stones and 45 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

5 to 8 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 15 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GC, CL; estimated AASHTO classification—A-7

8 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 5 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.3 to 1.5 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

#### **Characteristics of the Humdun Soil**

*Position on landscape:* North-facing side slopes of foothills

*Parent material:* Kind—loess influenced by volcanic ash over residuum; source—volcanic rock

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass, Sandberg bluegrass

### Typical Profile

- 0 to 6 inches—silt loam; platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 6 to 24 inches—loam, very fine sandy loam, silt loam; massive; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 24 to 41 inches—loam, very fine sandy loam, silt loam; massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 41 to 60 inches or more—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 10.3 to 12.1 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Boulflat Soil

*Position on landscape:* Crest and shoulder slopes of foothills  
*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert, shale, and quartzite  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Wyoming big sagebrush, bluebunch wheatgrass, Sandberg bluegrass

### Typical Profile

- 0 to 6 inches—gravelly loam; 25 to 50 percent pebbles (by weight); granular structure; soft, very friable;

mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-4

- 6 to 23 inches—gravelly clay loam, gravelly loam, gravelly sandy clay loam; 25 to 50 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

- 23 to 32 inches—strongly cemented duripan  
 32 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 20 to 34 inches  
*Depth to bedrock:* 22 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.4 to 4.1 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Slow  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper, south-facing side slopes of foothills

*Contrasting features:* Clayey layer of clay accumulation  
*Distinctive present vegetation:* Wyoming big sagebrush, Thurber needlegrass

#### Inclusion 2

*Position on landscape:* Incipient drainageways on north-facing side slopes of foothills

*Contrasting features:* Very deep soils that have gravelly sandy loam throughout the profile  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Canyon foot slopes between foothills

*Contrasting features:* Very deep soils, receives additional moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Bojo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Humdun soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Boulflat soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Bojo Soil for Selected Uses**

*Range seeding:* Too arid, droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Humdun Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—seepage

**Ratings of the Boulflat Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope, seepage

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Bojo soil—VIIs, nonirrigated; Humdun soil—VIIe, nonirrigated; Boulflat soil—VIe, nonirrigated

*Range site:* Bojo soil—024X026N; Humdun soil—024X005N; Boulflat soil—024X005N

**1420—Sumine-Reluctan-Cleavage association****Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,200 to 7,400 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 80 days

**Composition**

*Major components:*

- Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—40 percent
  - Reluctan very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, fine-loamy, mixed, frigid—30 percent
  - Cleavage very cobbly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—15 percent
- Contrasting inclusions:*
- Inclusion 1: Softscrabble cobbly loam, 4 to 15 percent slopes—Pachic Argixerolls, loamy-skeletal, mixed, frigid—9 percent
  - Inclusion 2: Lithic Xerollic Haplargids, 2 to 8 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—3 percent
  - Inclusion 3: Rock outcrop—2 percent
  - Inclusion 4: Rubble land—1 percent

**Characteristics of the Sumine Soil**

*Position on landscape:* Predominantly south-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, pine bluegrass, bottlebrush squirreltail

**Typical Profile**

0 to 10 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8);

nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7  
30 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.8 to 4.1 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Reluctant Soil

*Position on landscape:* Predominantly north-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—rhyolitic rock  
*Slope features:* Length—long; shape—smooth to slightly concave  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, bottlebrush squirreltail

### Typical Profile

0 to 8 inches—very gravelly loam; 10 to 25 percent cobbles and stones and 45 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4, A-2  
8 to 33 inches—gravelly clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7  
33 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 4.0 to 5.2 inches

*Water-supplying capacity:* 12 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Cleavage Soil

*Position on landscape:* Crests, shoulders, and upper side slopes of mountains  
*Parent material:* Kind—residuum; source—extrusive volcanic rock  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, bottlebrush squirreltail, phlox

### Typical Profile

0 to 4 inches—very cobbly loam; 30 to 45 percent cobbles and stones and 35 to 55 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6  
4 to 15 inches—extremely cobbly sandy clay loam, very gravelly clay loam, very cobbly clay loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2  
15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.6 to 1.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, incipient drainageways of mountains

*Contrasting features:* Thick, dark colored surface layer, higher water-supplying capacity

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 2**

*Position on landscape:* Smooth to slightly convex, lower crests of mountains

*Contrasting features:* Shallow soils that have a thin surface layer

*Distinctive present vegetation:* Black sagebrush, pine bluegrass

#### **Inclusion 3**

*Position on landscape:* Random small peaks of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 4**

*Position on landscape:* Rock stripes on mountain side slopes below rock outcrop

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Reluctan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Reluctan Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated; Reluctan soil—VIIIs, nonirrigated; Cleavage soil—VIIIs, nonirrigated

*Range site:* Sumine soil—024X029N; Reluctan soil—024X021N; Cleavage soil—024X016N

## **1421—Sumine-Softscrabble-Walti association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,400 to 7,200 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Sumine very cobbly loam, 50 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—35 percent

- Softscrabble cobbly loam, 30 to 50 percent slopes—Pachic Argixerolls, loamy-skeletal, mixed, frigid—25 percent

- Walti very cobbly loam, 8 to 15 percent slopes—Aridic Argixerolls, fine, montmorillonitic, frigid—25 percent

*Contrasting inclusions:*

- Inclusion 1: Rubble land—6 percent
- Inclusion 2: Lithic Xerollic Haplargids, 4 to 15 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—5 percent
- Inclusion 3: Rock outcrop—4 percent

**Characteristics of the Sumine Soil**

*Position on landscape:* North- and west-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—quartzite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, Sandberg bluegrass, bluebunch wheatgrass

**Typical Profile**

0 to 10 inches—very cobbly loam; 30 to 55 percent cobbles and stones and 40 to 50 percent pebbles (by weight); platy structure; soft, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

**Characteristics of the Softscrabble Soil**

*Position on landscape:* East-facing side slopes and snow pockets on mountains

*Parent material:* Kind—colluvium and residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, Sandberg bluegrass, Idaho fescue, Thurber needlegrass

**Typical Profile**

0 to 16 inches—cobbly loam; 25 to 40 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

16 to 30 inches—very cobbly clay loam; 30 to 45 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

30 to 60 inches or more—very gravelly clay loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

**Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.3 to 8.4 inches

*Water-supplying capacity:* 14 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

**Characteristics of the Walti Soil**

*Position on landscape:* Crest and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—rhyolite, tuffs, and quartzite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, Idaho fescue

**Typical Profile**

- 0 to 4 inches—very cobbly loam; 30 to 40 percent cobbles and stones and 20 to 35 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 4 to 10 inches—gravelly clay loam, clay loam; 0 to 10 percent cobbles and stones and 10 to 35 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 6.9); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6
- 10 to 30 inches—clay; gravelly clay; 0 to 10 percent cobbles and stones and 10 to 35 percent pebbles (by weight); prismatic structure; very hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CH, MH; estimated AASHTO classification—A-7
- 30 inches—unweathered bedrock

**Soil and Water Features**

- Depth to bedrock:* 20 to 30 inches
- Depth to seasonal high water table:* More than 60 inches
- Frequency of flooding:* None
- Permeability:* Very slow
- Available water capacity:* 3.7 to 4.8 inches
- Water-supplying capacity:* 12 inches
- Runoff:* Rapid
- Hydrologic group:* D
- Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8
- Hazard of erosion:* By water—slight; by wind—slight
- Shrink-swell potential:* High
- Corrosivity:* To steel—moderate; to concrete—low
- Potential frost action:* Low

**Contrasting Inclusions****Inclusion 1**

- Position on landscape:* Rock stripes on side slopes of mountains
- Contrasting features:* More than 90 percent stones on the surface
- Distinctive present vegetation:* Barren

**Inclusion 2**

- Position on landscape:* Convex, lower crests and shoulder slopes of mountains
- Contrasting features:* Bedrock at a depth of 14 to 20 inches

*Distinctive present vegetation:* Low sagebrush, black sagebrush, small rabbitbrush

**Inclusion 3**

- Position on landscape:* Ridges, spurs, and cliffs of mountains
- Contrasting features:* Bedrock exposed at the soil surface
- Distinctive present vegetation:* Barren

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

- Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair
- Suitability of the Softscrabble soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair
- Suitability of the Walti soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Sumine Soil for Selected Uses**

- Range seeding:* Poor—large stones, erodes easily
- Daily cover for landfill:* Poor—depth to bedrock, small stones, slope
- Shallow excavations:* Severe—depth to bedrock, slope
- Local roads and streets:* Severe—slope
- Roadfill:* Poor—depth to bedrock, slope
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—small stones, slope
- Pond reservoir areas:* Severe—slope
- Embankments, dikes, and levees:* Severe—large stones

**Ratings of the Softscrabble Soil for Selected Uses**

- Range seeding:* Fair—erodes easily, large stones
- Daily cover for landfill:* Poor—small stones, slope
- Shallow excavations:* Severe—slope
- Local roads and streets:* Severe—slope
- Roadfill:* Poor—slope
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—area reclaim, small stones, slope
- Pond reservoir areas:* Severe—slope
- Embankments, dikes, and levees:* Moderate—large stones

**Ratings of the Walti Soil for Selected Uses**

- Range seeding:* Poor—large stones
- Daily cover for landfill:* Poor—depth to bedrock, hard to pack
- Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Poor—low strength, depth to bedrock, shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated; Softscrabble soil—VIIIs, nonirrigated; Walti soil—VIIIs, nonirrigated

*Range site:* Sumine soil—024X029N; Softscrabble soil—024X021N; Walti soil—024X027N

## **1422—Sumine-Hapgood-Cleavage association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,300 to 8,500 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 80 days

### **Composition**

*Major components:*

- Sumine very cobbly loam, 50 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—35 percent
  - Hapgood very gravelly loam, 50 to 75 percent slopes—Pachic Cryoborolls, loamy-skeletal, mixed—30 percent
  - Cleavage extremely gravelly loam, 15 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—20 percent
- Contrasting inclusions:*
- Inclusion 1: Glean gravelly silt loam, 50 to 75 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 2: Loncan extremely stony loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 3: Rock outcrop—4 percent
  - Inclusion 4: Cumulic Haploxerolls, 2 to 15 percent slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, frigid—1 percent

### **Characteristics of the Sumine Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—quartzite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, Douglas rabbitbrush, bluebunch wheatgrass, Idaho fescue, arrowleaf balsamroot

### **Typical Profile**

0 to 10 inches—very cobbly loam; 30 to 55 percent cobbles and stones and 40 to 50 percent pebbles (by weight); platy structure; soft, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Hapgood Soil**

*Position on landscape:* Snow pockets and north-facing side slopes of mountains

*Parent material:* Kind—colluvium influenced by volcanic ash; source—extrusive volcanic rock

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Mountain big sagebrush, snowberry, Sandberg bluegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 17 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles

(by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

17 to 40 inches—very gravelly loam; 5 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

40 to 60 inches or more—very cobbly loam, very gravelly loam; 15 to 40 percent cobbles and stones and 40 to 50 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 4.8 to 6.0 inches

*Water-supplying capacity:* 16 inches

*Runoff:* Very rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, Sandberg bluegrass, Idaho fescue

#### **Typical Profile**

0 to 4 inches—extremely gravelly loam; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 0 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

#### **Contrasting Inclusions**

##### **Inclusion 1**

*Position on landscape:* Slightly concave, lower snow pockets of mountains

*Contrasting features:* Thick, dark colored surface layer

*Distinctive present vegetation:* Mountain big sagebrush, snowberry, lanceleaf rabbitbrush

##### **Inclusion 2**

*Position on landscape:* Lower, north-facing side slopes of mountains

*Contrasting features:* Soils do not have layer of clay accumulation, bedrock at a depth of 20 to 40 inches

*Distinctive present vegetation:* Mountain big sagebrush, Douglas rabbitbrush, bluebunch wheatgrass

##### **Inclusion 3**

*Position on landscape:* Random small peaks and ridges of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

##### **Inclusion 4**

*Position on landscape:* Drainageways of mountains

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, Idaho fescue, bluebunch wheatgrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Hapgood soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Sumine Soil for Selected Uses

*Range seeding:* Poor—large stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

#### Ratings of the Hapgood Soil for Selected Uses

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

#### Ratings of the Cleavage Soil for Selected Uses

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

### Interpretive Groups

*Capability classification:* Sumine soil—VIIIs, nonirrigated;

Hapgood soil—VIIIs, nonirrigated; Cleavage soil—VIIe, nonirrigated

*Range site:* Sumine soil—024X029N; Hapgood soil—024X032N; Cleavage soil—024X016N

### 1423—Sumine-Chen-Rock outcrop association

#### Map Unit Setting

*Position on landscape:* Mountains

*Elevation:* 5,700 to 7,000 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 85 days

#### Composition

##### Major components:

- Sumine very cobbly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—35 percent
  - Chen very gravelly loam, 2 to 8 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—25 percent
  - Rock outcrop—25 percent
- Contrasting inclusions:*
- Inclusion 1: Rubble land—5 percent
  - Inclusion 2: Pachic Haploxerolls, 30 to 50 percent slopes—Pachic Haploxerolls, fine-loamy, mixed, frigid—5 percent
  - Inclusion 3: Aridic Haploxerolls, 8 to 15 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent

#### Characteristics of the Sumine Soil

*Position on landscape:* Side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—quartzite, breccia, and sandstone

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye

#### Typical Profile

- 0 to 10 inches—very cobbly loam; 30 to 55 percent cobbles and stones and 40 to 50 percent pebbles (by weight); platy structure; soft, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4
- 10 to 30 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles

(by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.1 to 3.2 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Chen Soil**

*Position on landscape:* Crests of mountains

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—andesite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass

### **Typical Profile**

0 to 7 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 6.9); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

7 to 15 inches—very cobbly clay, very gravelly clay, extremely gravelly clay; 0 to 45 percent cobbles and stones and 55 to 75 percent pebbles (by weight); angular blocky structure; hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-7

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 1.1 to 1.7 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of Rock Outcrop**

*Position on landscape:* Shoulders, cliffs on canyon walls, and scattered peaks of mountains

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* None

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Screes below rock outcrops on side slopes of mountains

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Concave snow pockets on side slopes of mountains

*Contrasting features:* Thick, dark colored surface layer

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue, bluebunch wheatgrass

#### **Inclusion 3**

*Position on landscape:* Toe slopes and canyon bottoms of mountains

*Contrasting features:* Very deep

*Distinctive present vegetation:* Mountain big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Chen soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

### **Ratings of the Chen Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, too clayey

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock

*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated; Chen soil—VIIIs, nonirrigated; Rock outcrop—VIIIIs

*Range site:* Sumine soil—024X029N; Chen soil—024X027N

## **1425—Sumine-Loncan association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 7,000 to 7,900 feet

*Average annual precipitation:* About 13 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 70 days

### **Composition**

*Major components:*

- Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—45 percent

- Loncan very gravelly very fine sandy loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—40 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids, 8 to 15 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—10 percent

- Inclusion 2: Rubble land—3 percent

- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Sumine Soil**

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—quartzite and sandstone

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass

### **Typical Profile**

0 to 10 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.8 to 4.1 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Loncan Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope feature:* Length—short; shape—convex

*Dominant present vegetation:* Idaho fescue, mountain big sagebrush, antelope bitterbrush

### **Typical Profile**

0 to 14 inches—very gravelly very fine sandy loam; 0 to 15 percent cobbles and stones and 55 to 70 percent pebbles (by weight); granular structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GM; estimated AASHTO classification—A-1, A-2

14 to 31 inches—very gravelly loam, extremely cobbly

loam, very gravelly sandy clay loam; 10 to 45 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

31 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 21 to 38 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.1 to 3.6 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests of mountains

*Contrasting features:* Bedrock within a depth of 20 inches

*Distinctive present vegetation:* Low sagebrush, black sagebrush

#### **Inclusion 2**

*Position on landscape:* Rock stringers below rock outcrop and on side slopes of mountains

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Rimrock and scattered peaks of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Loncan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Loncan Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer, large stones

### **Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated; Loncan soil—VIIs, nonirrigated

*Range site:* Sumine soil—025X009N; Loncan soil—025X012N

## **1426—Sumine-Cleavage-Loncan association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,200 to 7,400 feet

*Average annual precipitation:* About 13 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 90 days

### **Composition**

*Major components:*

- Sumine gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—35 percent
  - Cleavage extremely gravelly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—30 percent
  - Loncan gravelly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—20 percent
- Contrasting inclusions:*
- Inclusion 1: Cleavage extremely gravelly loam, 30 to

50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed frigid—6 percent

- Inclusion 2: Rock outcrop—4 percent
- Inclusion 3: Aridic Haploxerolls, 30 to 50 percent slopes—Aridic Haploxerolls, coarse-loamy, mixed, frigid—3 percent
- Inclusion 4: Cumulic Haploxerolls, 4 to 8 percent slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent

### **Characteristics of the Sumine Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—quartzite and breccia

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, antelope bitterbrush

### **Typical Profile**

0 to 10 inches—gravelly loam; 25 to 50 percent pebbles (by weight); platy structure; soft, friable; neutral (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-SM; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.5 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crest and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, bluegrass, Idaho fescue

### **Typical Profile**

0 to 4 inches—extremely gravelly loam; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 0 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Loncan Soil**

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—chert

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, Idaho fescue, antelope bitterbrush

### **Typical Profile**

0 to 14 inches—gravelly loam; 0 to 15 percent cobbles

and stones and 25 to 40 percent pebbles (by weight); granular structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6

14 to 31 inches—very gravelly loam, extremely cobbly loam, very gravelly sandy clay loam; 10 to 55 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; soft, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

31 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 21 to 38 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.3 to 3.8 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Upper side slopes of mountains

*Contrasting features:* Slopes of 30 to 50 percent

*Distinctive present vegetation:* Low sagebrush, bluegrass

#### **Inclusion 2**

*Position on landscape:* Random small peaks and ridges of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Concave, north-facing snow pockets on side slopes of mountains

*Contrasting features:* Receives additional soil moisture from snow drifts

*Distinctive present vegetation:* Antelope bitterbrush, mountain big sagebrush

#### **Inclusion 4**

*Position on landscape:* Small catch basins and canyon bottoms of mountains

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Alpine timothy, Nevada bluegrass

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Loncan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Loncan Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer, large stones

### ***Interpretive Groups***

*Capability classification:* Sumine soil—VIIe, nonirrigated; Cleavage soil—VIIs, nonirrigated; Loncan soil—VIIe, nonirrigated

*Range site:* Sumine soil—025X009N; Cleavage soil—025X024N; Loncan soil—025X012N

## **1427—Sumine-Itca-Softscrabble association**

### ***Map Unit Setting***

*Position on landscape:* Mountains

*Elevation:* 6,800 to 8,000 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 70 days

### ***Composition***

*Major components:*

- Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—50 percent

- Itca very cobbly loam, 30 to 50 percent slopes—Lithic Argixerolls, clayey-skeletal, montmorillonitic, frigid—20 percent

- Softscrabble gravelly loam, 15 to 50 percent slopes—Pachic Argixerolls, loamy-skeletal, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent

- Inclusion 2: Lithic Xerollic Haplargids, 15 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—4 percent

- Inclusion 3: Welch loam, drained, 2 to 8 percent slopes—Cumulic Haplaquolls, fine-loamy, mixed, frigid—3 percent

- Inclusion 4: Rubble land—2 percent

### ***Characteristics of the Sumine Soil***

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—tuffs and breccia

*Slope features:* Length—long; shape—smooth to convex

*Dominant present vegetation:* Mountain big sagebrush, Thurber needlegrass, bluebunch wheatgrass, oceanspray, invading singleleaf pinyon, and Utah juniper

### ***Typical Profile***

0 to 10 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### ***Soil and Water Features***

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.8 to 4.1 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### ***Characteristics of the Itca Soil***

*Position on landscape:* Shoulders and upper side slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Idaho fescue, singleleaf pinyon, mountain big sagebrush

### ***Typical Profile***

0 to 9 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-4, A-6

9 to 17 inches—very gravelly clay, very cobbly clay loam; 0 to 55 percent cobbles and stones and 25 to

70 percent pebbles (by weight); prismatic structure; hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, GC; estimated AASHTO classification—A-7, A-2

17 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.8 to 2.3 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Softscrabble Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—extrusive volcanic rock

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, pine bluegrass, currant, basin wildrye, Idaho fescue, bottlebrush squirreltail

### **Typical Profile**

0 to 16 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

16 to 30 inches—very cobbly clay loam; 30 to 45 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

30 to 60 inches or more—gravelly clay loam; 5 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated

Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.1 to 8.2 inches

*Water-supplying capacity:* 14 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Random small peaks and ridges of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Convex, broad crests and shoulders of mountains

*Contrasting features:* Bedrock at a depth of 10 to 20 inches, loamy subsoil

*Distinctive present vegetation:* Low sagebrush, bluegrass

#### **Inclusion 3**

*Position on landscape:* Concave drainageways along canyon bottoms of mountains

*Contrasting features:* Very deep and somewhat poorly drained

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye, rose

#### **Inclusion 4**

*Position on landscape:* Rock screes on side slopes of mountains

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

*Site index for common trees on the Itca Soil:* Singleleaf pinyon—65; Utah juniper—65

*Most important native understory plants:* Thurber needlegrass, bluebunch wheatgrass, Idaho fescue, bluegrass, mountain big sagebrush, snowberry, lupine, curlleaf mountainmahogany

**Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Itca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; coniferous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Softscrabble soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Itca Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope, large stones

*Local roads and streets:* Severe—depth to bedrock, slope, large stones

*Roadfill:* Poor—depth to bedrock, large stones, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—depth to bedrock, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

**Ratings of the Softscrabble Soil for Selected Uses**

*Range seeding:* Poor—erodes easily

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim, small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—large stones

**Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated;

Itca soil—VIIIs, nonirrigated; Softscrabble soil—VIIe, nonirrigated

*Range site:* Sumine soil—024X029N; Itca soil—025X061N; Softscrabble soil—024X021N

*Woodland suitability group:* Itca soil—2R

**1428—Sumine-Rubble land-Cleavage association****Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,400 to 8,200 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 80 days

**Composition**

*Major components:*

- Sumine very gravelly loam, 50 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—40 percent

- Rubble land—30 percent

- Cleavage extremely gravelly loam, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Aridic Argixerolls, 30 to 50 percent slopes—Aridic Argixerolls, fine-loamy, mixed, frigid—8 percent

- Inclusion 2: Rock outcrop—5 percent

- Inclusion 3: Aridic Haploxerolls, 50 to 75 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent

**Characteristics of the Sumine Soil**

*Position on landscape:* Predominantly south- and west-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—breccias

*Slope features:* Length—long; shape—smooth to convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, basin wildrye, Idaho fescue

**Typical Profile**

0 to 10 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

10 to 30 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35

to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

30 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.8 to 4.1 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of Rubble Land**

*Position on landscape:* Screes on side slopes of mountains

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* None

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Windswept crests and shoulder slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Low sagebrush, black sagebrush, bluegrass, low rabbitbrush

### **Typical Profile**

0 to 4 inches—extremely gravelly loam; 0 to 10 percent cobbles and stones and 75 to 85 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 0 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than

2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave, north-facing side slopes of mountains

*Contrasting features:* Deep soils that have a clay loam layer of clay accumulation

*Distinctive present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Idaho fescue

#### **Inclusion 2**

*Position on landscape:* Rimrock on side slopes of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 3**

*Position on landscape:* Smooth to concave areas below rock outcrop and scree slopes of mountains

*Contrasting features:* Deep soils that are gravelly loam throughout the profile

*Distinctive present vegetation:* Common chokecherry, currant, snowberry

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—large stones

#### **Interpretive Groups**

*Capability classification:* Sumine soil—VIIIs, nonirrigated; Rubble land—VIIIIs; Cleavage soil—VIIIs, nonirrigated  
*Range site:* Sumine soil—024X029N; Cleavage soil—024X016N

### **1429—Sumine-Winada Variant-Pernty association**

#### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 6,500 to 9,200 feet  
*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 43 degrees F  
*Frost-free season:* About 70 days

#### **Composition**

##### *Major components:*

- Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—40 percent
- Winada Variant very gravelly fine sandy loam, 30 to 50 percent slopes—Argic Cryoborolls, loamy-skeletal, mixed—25 percent
- Pernty very gravelly sandy loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—25 percent

##### *Contrasting inclusions:*

- Inclusion 1: Cleavage extremely gravelly sandy loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—5 percent
- Inclusion 2: Rock outcrop—5 percent

#### **Characteristics of the Sumine Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—quartzite

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Mountain big sagebrush, rabbitbrush, bluebunch wheatgrass

#### **Typical Profile**

0 to 10 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4  
 10 to 30 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7  
 30 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.8 to 4.1 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

#### **Characteristics of the Winada Variant Soil**

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Kind—residuum and colluvium; source—chert

*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Idaho fescue, mountain big sagebrush, mountain brome, serviceberry

### Typical Profile

0 to 7 inches—very gravelly fine sandy loam; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); granular structure; soft, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

7 to 24 inches—very gravelly sandy clay loam; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

24 to 45 inches—extremely gravelly loam; 5 to 15 percent cobbles and stones and 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

45 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 40 to 60 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.2 to 4.6 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—3; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Pernty Soil

*Position on landscape:* Shoulders and upper side slopes of mountains  
*Parent material:* Kind—residuum; source—chert and quartzite  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Mountain big sagebrush, snowberry, rabbitbrush, bluebunch wheatgrass  
*Surface cover:* 25 percent pebbles

### Typical Profile

0 to 3 inches—very gravelly sandy loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); granular structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC; estimated AASHTO classification—A-1, A-2

3 to 14 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 10 to 30 percent cobbles and stones and 45 to 55 percent pebbles (by weight); subangular blocky structure; hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-7, A-6

14 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.1 to 1.4 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex ridges and crests of mountains  
*Contrasting features:* Extremely gravelly surface layer  
*Distinctive present vegetation:* Low sagebrush, Idaho fescue, Sandberg bluegrass

#### Inclusion 2

*Position on landscape:* Rimrock and extremely eroded side slopes of mountains  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Sumine soil for named elements:* Wild

herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Winada Variant soil for named elements:*

Wild herbaceous plants (nonirrigated)—good; shrubs (nonirrigated)—good

*Suitability of the Pernty soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Sumine Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Winada Variant Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Moderate—thin layer

**Ratings of the Pernty Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope, depth to bedrock

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—slope, depth to bedrock

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Sumine soil—VIIs, nonirrigated; Winada Variant soil—VIIs, nonirrigated; Pernty soil—VIIs, nonirrigated

*Range site:* Sumine soil—024X029N; Winada Variant soil—024X032N; Pernty soil—024X021N

**1450—Atlow, steep-Atlow-Stingdorn association**

**Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,200 to 6,100 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Atlow very gravelly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—45 percent

- Atlow very gravelly loam, 8 to 15 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—20 percent

- Stingdorn cobbly loam, 15 to 30 percent slopes—Typic Durargids, loamy-skeletal, mixed, mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Colbar gravelly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—5 percent

- Inclusion 2: Xerollic Haplargids, 15 to 30 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—5 percent

- Inclusion 3: Xeric Torriorthents, 4 to 15 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

**Characteristics of the Atlow, Steep, Soil**

*Position on landscape:* Predominantly north- and east-facing side slopes of foothills

*Parent material:* Kind—residuum; source—chert, shale, and rhyolitic tuffs

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, Douglas rabbitbrush, ephedra, Utah juniper

**Typical Profile**

0 to 3 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6

3 to 14 inches—very gravelly clay loam, very cobbly clay loam; 0 to 45 percent cobbles and stones and 50 to 75 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline

(pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Atlow Soil**

*Position on landscape:* Crests and shoulder slopes of foothills

*Parent material:* Kind—residuum; source—cherts, shales, and rhyolitic tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, Douglas rabbitbrush, bottlebrush squirreltail, ephedra, Utah juniper

#### **Typical Profile**

0 to 3 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6

3 to 14 inches—very gravelly clay loam, very cobbly clay loam; 0 to 45 percent cobbles and stones and 50 to 75 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Moderately rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Stingdorn Soil**

*Position on landscape:* South- and west-facing, lower side slopes of foothills

*Parent material:* Kind—residuum; source—rhyolitic tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 7 inches—cobbly loam; 25 to 40 percent cobbles and stones and 10 to 25 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

7 to 15 inches—very cobbly clay loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC; estimated AASHTO classification—A-6

15 to 20 inches—indurated duripan; massive; extremely hard, extremely firm

20 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to hardpan:* 8 to 20 inches

*Depth to bedrock:* 8 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave, north-facing side slopes and foot slopes of foothills

*Contrasting features:* Bedrock at a depth of 20 to 40 inches

*Distinctive present vegetation:* Wyoming big sagebrush, bluegrass

#### **Inclusion 2**

*Position on landscape:* Convex, upper, south-facing side slopes of foothills

*Contrasting features:* Duripan at a depth of 20 to 40 inches

*Distinctive present vegetation:* Black sagebrush, bluegrass

#### **Inclusion 3**

*Position on landscape:* Concave drainageways of foothills

*Contrasting features:* Receives additional soil moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Atlow, steep, soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Atlow soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Stingdorn soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Atlow, Steep, Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Atlow Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, cemented pan

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Stingdorn Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope, cemented pan

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, large stones

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—large stones

### **Interpretive Groups**

*Capability classification:* Atlow, steep, soil—VIIe, nonirrigated; Atlow soil—VIIs, nonirrigated; Stingdorn soil—VIIe, nonirrigated

*Range site:* Atlow, steep, soil—024X030N; Atlow soil—024X030N; Stingdorn soil—024X002N

## **1451—Atlow-Reluctan-Trunk association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 5,800 to 6,600 feet

*Average annual precipitation:* About 10 inches

*Average annual air temperature:* About 46 degrees F

*Frost-free season:* About 90 days

### **Composition**

#### **Major components:**

- Atlow very gravelly loam, 30 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—35 percent

- Reluctan cobbly loam, 30 to 50 percent slopes—Aridic Argixerolls, fine-loamy, mixed, frigid—30 percent

- Trunk very cobbly loam, 15 to 30 percent slopes—

Xerollic Haplargids, fine, montmorillonitic, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Perwick very gravelly loam, 50 to 75 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—8 percent
- Inclusion 2: Aridic Haploxerolls, 15 to 30 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
- Inclusion 3: Rock outcrop—2 percent

### **Characteristics of the Atlow Soil**

*Position on landscape:* Shoulders and upper side slopes of mountains

*Parent material:* Kind—residuum; source—chert and rhyolitic tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, phlox, Sandberg bluegrass, small rabbitbrush

### **Typical Profile**

0 to 3 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6

3 to 14 inches—very gravelly clay loam, very cobbly clay loam; 0 to 45 percent cobbles and stones and 50 to 75 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Reluctant Soil**

*Position on landscape:* North-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—rhyolitic rocks

*Slope features:* Length—short; shape—concave to slightly convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, bluegrass

### **Typical Profile**

0 to 8 inches—cobbly loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

8 to 33 inches—gravelly clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

33 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.0 to 5.2 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Trunk Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—colluvium and residuum; source—chert, andesite, and rhyolite

*Slope features:* Length—long; shape—convex to slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, bottlebrush squirreltail, small rabbitbrush, horsebrush

## Typical Profile

- 0 to 5 inches—very cobbly loam; 30 to 45 percent cobbles and stones and 25 to 50 percent pebbles (by weight); granular structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4, A-6
- 5 to 28 inches—gravelly clay loam, gravelly clay; 0 to 10 percent cobbles and stones and 20 to 50 percent pebbles (by weight); prismatic structure; hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, GC, CH; estimated AASHTO classification—A-7
- 28 inches—unweathered bedrock

## Soil and Water Features

- Depth to bedrock:* 20 to 40 inches
- Depth to seasonal high water table:* More than 60 inches
- Frequency of flooding:* None
- Permeability:* Very slow
- Available water capacity:* 3.1 to 4.0 inches
- Water-supplying capacity:* 9 inches
- Runoff:* Rapid
- Hydrologic group:* D
- Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8
- Hazard of erosion:* By water—slight; by wind—slight
- Shrink-swell potential:* High
- Corrosivity:* To steel—high; to concrete—low
- Potential frost action:* Low

## Contrasting Inclusions

### Inclusion 1

- Position on landscape:* Convex, south-facing, eroded side slopes of mountains
- Contrasting features:* Eroded surface layer
- Distinctive present vegetation:* Utah juniper, black sagebrush, bluegrass

### Inclusion 2

- Position on landscape:* Concave, high elevation, south-facing back slopes of mountains
- Contrasting features:* Deep soils that have a dark colored surface layer
- Distinctive present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, bluebunch wheatgrass

### Inclusion 3

- Position on landscape:* Random small peaks, ridges, and severely eroded side slopes of mountains
- Contrasting features:* Bedrock exposed at the soil surface
- Distinctive present vegetation:* Barren

## Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

- Suitability of the Atlow soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair
- Suitability of the Reluctan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair
- Suitability of the Trunk soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Atlow Soil for Selected Uses

- Range seeding:* Poor—droughty, small stones
- Daily cover for landfill:* Poor—depth to bedrock, small stones, slope
- Shallow excavations:* Severe—depth to bedrock, slope
- Local roads and streets:* Severe—depth to bedrock, slope
- Roadfill:* Poor—depth to bedrock, slope
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—depth to bedrock, small stones, slope
- Pond reservoir areas:* Severe—depth to bedrock, slope
- Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Reluctan Soil for Selected Uses

- Range seeding:* Poor—erodes easily
- Daily cover for landfill:* Poor—depth to bedrock, small stones, slope
- Shallow excavations:* Severe—depth to bedrock, slope
- Local roads and streets:* Severe—slope
- Roadfill:* Poor—depth to bedrock, slope
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—small stones, slope
- Pond reservoir areas:* Severe—slope
- Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Trunk Soil for Selected Uses

- Range seeding:* Poor—large stones
- Daily cover for landfill:* Poor—depth to bedrock, hard to pack, small stones
- Shallow excavations:* Severe—depth to bedrock, slope
- Local roads and streets:* Severe—low strength, shrink-swell, slope
- Roadfill:* Poor—low strength, slope
- Sand:* Improbable source—excess fines
- Gravel:* Improbable source—excess fines
- Topsoil:* Poor—small stones, slope
- Pond reservoir areas:* Severe—slope
- Embankments, dikes, and levees:* Severe—thin layer

### ***Interpretive Groups***

*Capability classification:* Atlow soil—VIIe, nonirrigated; Reluctan soil—VIIs, nonirrigated; Trunk soil—VIIs, nonirrigated

*Range site:* Atlow soil—024X030N; Reluctan soil—024X021N; Trunk soil—024X005N

## **1452—Atlow-Minat-Old Camp association**

### ***Map Unit Setting***

*Position on landscape:* Mountains

*Elevation:* 5,200 to 6,200 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

### ***Composition***

*Major components:*

- Atlow gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—45 percent
  - Minat very gravelly loam, 15 to 30 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—30 percent
  - Old Camp very cobbly loam, 8 to 15 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—15 percent
- Contrasting inclusions:*
- Inclusion 1: Aridic Argixerolls, 15 to 30 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—8 percent
  - Inclusion 2: Rock outcrop—2 percent

### ***Characteristics of the Atlow Soil***

*Position on landscape:* South- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert, shale, greenstone, and altered rhyolitic tuff

### ***Typical Profile***

- 0 to 3 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC, CL; estimated AASHTO classification—A-6
- 3 to 14 inches—very gravelly clay loam, very cobbly clay loam; 0 to 45 percent cobbles and stones and 50 to 75 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified

classification—GC; estimated AASHTO

classification—A-2, A-6, A-7

14 inches—unweathered bedrock

### ***Soil and Water Features***

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.2 to 1.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### ***Characteristics of the Minat Soil***

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—colluvium influenced by volcanic ash; source—chert and shale

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass, bluebunch wheatgrass

### ***Typical Profile***

- 0 to 9 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2
- 9 to 27 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2
- 27 to 60 inches or more—very gravelly fine sandy loam, very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 5.6 to 6.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.15; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Old Camp Soil

*Position on landscape:* Summits of mountain plateaus  
*Parent material:* Kind—residuum; source—ash flow tuffs  
*Slope features:* Length—long; shape—slightly concave to slightly convex  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, small rabbitbrush, green ephedra

### Typical Profile

0 to 3 inches—very cobbly loam; 35 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC, SM-SC, SC; estimated AASHTO classification—A-2, A-4, A-6  
 3 to 15 inches—very cobbly clay loam; 35 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); subangular blocky structure; hard, firm; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6  
 15 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.5 to 1.9 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8  
*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave, north-facing side slopes of mountains  
*Contrasting features:* Bedrock at a depth of 20 to 40 inches; thick, dark colored surface layer  
*Distinctive present vegetation:* Mountain big sagebrush, western wheatgrass

#### Inclusion 2

*Position on landscape:* Rimrock on shoulder slopes of mountains  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Atlow soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Minat soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Old Camp soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Atlow Soil for Selected Uses

*Range seeding:* Poor—droughty  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Minat Soil for Selected Uses

*Range seeding:* Poor—small stones  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Slight

#### **Ratings of the Old Camp Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, large stones

*Shallow excavations:* Severe—depth to bedrock

*Local roads and streets:* Severe—depth to bedrock

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Interpretive Groups**

*Capability classification:* Atlow soil—VIIe, nonirrigated;  
Minat soil—VIIs, nonirrigated; Old Camp soil—VIIs,  
nonirrigated

*Range site:* Atlow soil—024X030N; Minat soil—  
024X005N; Old Camp soil—024X047N

### **1453—Atlow-Colbar-Rock outcrop association**

#### **Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,200 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Atlow very gravelly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—60 percent
- Colbar gravelly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—15 percent
- Rock outcrop—10 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Haplargids, 30 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—6 percent
- Inclusion 2: Typic Natrargids, 15 to 50 percent slopes—Typic Natrargids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 3: Durixerollic Camborthids, 4 to 15 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—4 percent

#### **Characteristics of the Atlow Soil**

*Position on landscape:* Crests and side slopes of foothills

*Parent material:* Kind—residuum; source—altered rhyolitic ash flow tuff

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, small rabbitbrush, bottlebrush squirreltail, Sandberg bluegrass

#### **Typical Profile**

0 to 3 inches—very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2, A-6

3 to 14 inches—very gravelly clay loam, very cobbly clay loam; 0 to 45 percent cobbles and stones and 50 to 75 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.3 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Colbar Soil**

*Position on landscape:* North-facing side slopes of foothills

*Parent material:* Kind—residuum and colluvium; source—rhyolitic tuffs

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail, Sandberg bluegrass

### Typical Profile

0 to 3 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, SM, GM-GC, GM; estimated AASHTO classification—A-4

3 to 22 inches—cobble loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

22 to 26 inches—gravelly loam, cobble loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.4 to 3.9 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of Rock Outcrop

*Position on landscape:* Scattered peaks of foothills

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* None

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave, colluvial back slopes of foothills

*Contrasting features:* Deep

*Distinctive present vegetation:* Black sagebrush, bottlebrush squirreltail

#### Inclusion 2

*Position on landscape:* Convex, lower side slopes of foothills

*Contrasting features:* Sodium-affected layer of clay accumulation

*Distinctive present vegetation:* Shadscale, small rabbitbrush, bud sagebrush

#### Inclusion 3

*Position on landscape:* Concave foot slopes of foothills

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, Nevada bluegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Atlow soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Atlow Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Colbar Soil for Selected Uses

*Range seeding:* Fair—droughty

*Daily cover for landfill:* Poor—depth to bedrock, slope, large stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope, small stones

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Atlow soil—VIIIs, nonirrigated; Colbar soil—VIe, nonirrigated; Rock outcrop—VIIIs

*Range site:* Atlow soil—024X030N; Colbar soil—024X005N

## **1532—Cleavage-Rubble land-Bregar association**

### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,200 to 7,200 feet

*Average annual precipitation:* About 14 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 90 days

### **Composition**

*Major components:*

- Cleavage very gravelly fine sandy loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—45 percent
- Rubble land—25 percent
- Bregar very gravelly fine sandy loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—8 percent
- Inclusion 2: Locane extremely gravelly sandy loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—7 percent

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Side slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Idaho fescue, bluebunch wheatgrass, low sagebrush

### **Typical Profile**

0 to 4 inches—very gravelly fine sandy loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of Rubble Land**

*Position on landscape:* Screens on side slopes of mountains

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* None

### **Characteristics of the Bregar Soil**

*Position on landscape:* Crests and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Idaho fescue, low sagebrush, bluegrass, black sagebrush

### **Typical Profile**

0 to 4 inches—very gravelly fine sandy loam; 10 to 20 percent cobbles and stones and 45 to 60 percent pebbles (by weight); platy structure; soft, very friable; slightly acid (pH 6.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GM; estimated AASHTO classification—A-1, A-2

4 to 11 inches—very gravelly clay loam, extremely gravelly loam, very cobbly sandy clay loam; 0 to 40 percent cobbles and stones and 65 to 80 percent pebbles (by weight); angular blocky structure; slightly hard, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

11 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 5 to 12 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow  
*Available water capacity:* 0.9 to 1.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Random small peaks of mountains  
*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* South-facing, lower side slopes of mountains  
*Contrasting features:* Very gravelly clay loam or very gravelly clay layer of clay accumulation  
*Distinctive present vegetation:* Black sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Bregar soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Cleavage Soil for Selected Uses**

*Range seeding:* Poor—small stones, droughty  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—slope, depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Bregar Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones, rooting depth  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Cleavage soil—VIIIs, nonirrigated; Rubble land—VIIIIs; Bregar soil—VIIIs, nonirrigated  
*Range site:* Cleavage soil—025X017N; Bregar soil—024X016N

## **1542—Linrose-Cleavage-Pernty association**

### **Map Unit Setting**

*Position on landscape:* Mountains  
*Elevation:* 6,600 to 8,000 feet  
*Average annual precipitation:* About 12 inches  
*Average annual air temperature:* About 44 degrees F  
*Frost-free season:* About 80 days

### **Composition**

#### *Major components:*

- Linrose gravelly loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—30 percent
  - Cleavage very gravelly loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—30 percent
  - Pernty very gravelly loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—25 percent
- Contrasting inclusions:*
- Inclusion 1: Rubble land—6 percent
  - Inclusion 2: Bregar extremely cobbly loam, 30 to 75 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 3: Glean silt loam, 50 to 75 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—3 percent
  - Inclusion 4: Aridic Haploxerolls, 30 to 50 percent slopes—Aridic Haploxerolls, fine-loamy, mixed, frigid—1 percent

### **Characteristics of the Linrose Soil**

*Position on landscape:* North-facing side slopes of mountains  
*Parent material:* Kind—residuum and colluvium; source—chert and quartzite  
*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Idaho fescue, black sagebrush, bluegrass

*Surface cover:* 30 percent pebbles, 10 percent cobbles

### **Typical Profile**

0 to 8 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, ML; estimated AASHTO classification—A-4

8 to 26 inches—very gravelly loam, very gravelly sandy loam; 0 to 15 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM-GC; estimated AASHTO classification—A-2

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 2.4 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.28; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Cleavage Soil**

*Position on landscape:* Crest and shoulder slopes of mountains

*Parent material:* Kind—residuum; source—extrusive volcanic rock

*Dominant present vegetation:* Low sagebrush, bluebunch wheatgrass, Idaho fescue

### **Typical Profile**

0 to 4 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2, A-4, A-6

4 to 15 inches—very cobbly clay loam, extremely gravelly clay loam, very gravelly loam; 25 to 45 percent cobbles and stones and 55 to 70 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

15 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.8 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Pernty Soil**

*Position on landscape:* West-, east-, and upper south-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and quartzite

*Slope features:* Length—long; shape—smooth to slightly concave

*Dominant present vegetation:* Idaho fescue, bluebunch wheatgrass, basin wildrye

### **Typical Profile**

0 to 3 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); granular structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

3 to 14 inches—very gravelly clay loam, very gravelly loam, very cobbly clay loam; 10 to 30 percent cobbles and stones and 45 to 55 percent pebbles (by weight); subangular blocky structure; hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-7, A-6

14 inches—unweathered bedrock

**Soil and Water Features***Depth to bedrock:* 14 to 20 inches*Depth to seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* Moderately slow*Available water capacity:* 1.1 to 1.4 inches*Water-supplying capacity:* 10 inches*Runoff:* Rapid*Hydrologic group:* D*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7*Hazard of erosion:* By water—moderate; by wind—slight*Shrink-swell potential:* Moderate*Corrosivity:* To steel—moderate; to concrete—low*Potential frost action:* Moderate**Contrasting Inclusions****Inclusion 1***Position on landscape:* Rock screes on south-facing side slopes of mountains*Contrasting features:* More than 90 percent stones on the surface*Distinctive present vegetation:* Barren**Inclusion 2***Position on landscape:* Convex lower side slopes of mountains*Contrasting features:* Thin, light colored surface layer*Distinctive present vegetation:* Black sagebrush, low sagebrush**Inclusion 3***Position on landscape:* Concave, north-facing side slopes of mountains*Contrasting features:* Deep soil that receives extra moisture from drifted snow*Distinctive present vegetation:* Idaho fescue**Inclusion 4***Position on landscape:* Lower, south-facing side slopes of mountains*Contrasting features:* Deep soils*Distinctive present vegetation:* Bluebunch wheatgrass, mountain big sagebrush**Major Uses****Current uses:** Rangeland, wildlife habitat**Wildlife habitat elements:***Suitability of the Linrose soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair*Suitability of the Cleavage soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair*Suitability of the Pernty soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair**Ratings of the Linrose Soil for Selected Uses***Range seeding:* Poor—erodes easily*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope*Shallow excavations:* Severe—depth to bedrock, slope*Local roads and streets:* Severe—slope*Roadfill:* Poor—depth to bedrock, slope*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—small stones, slope*Pond reservoir areas:* Severe—slope*Embankments, dikes, and levees:* Severe—thin layer**Ratings of the Cleavage Soil for Selected Uses***Range seeding:* Poor—small stones, droughty*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope*Shallow excavations:* Severe—depth to bedrock, slope*Local roads and streets:* Severe—depth to bedrock, slope*Roadfill:* Poor—slope, depth to bedrock*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—depth to bedrock, small stones, slope*Pond reservoir areas:* Severe—depth to bedrock, slope*Embankments, dikes, and levees:* Severe—large stones**Ratings of the Pernty Soil for Selected Uses***Range seeding:* Poor—droughty, small stones*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope*Shallow excavations:* Severe—slope, depth to bedrock*Local roads and streets:* Severe—slope, depth to bedrock*Roadfill:* Poor—slope, depth to bedrock*Sand:* Improbable source—excess fines*Gravel:* Improbable source—excess fines*Topsoil:* Poor—depth to bedrock, small stones, slope*Pond reservoir areas:* Severe—slope, depth to bedrock*Embankments, dikes, and levees:* Severe—thin layer**Interpretive Groups***Capability classification:* Linrose soil—VIIe, nonirrigated; Cleavage soil—VIIs, nonirrigated; Pernty soil—VIIs, nonirrigated*Range site:* Linrose soil—024X042N; Cleavage soil—024X027N; Pernty soil—024X021N**1570—Koynik Variant-Oxcurel-Whirlo association****Map Unit Setting***Position on landscape:* Volcanic cones and associated fan piedmonts

*Elevation:* 4,800 to 5,200 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Koyunik Variant very gravelly sandy loam, 15 to 50 percent slopes, rubbly—Lithic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—35 percent
- Oxcorel cobbly very fine sandy loam, 2 to 8 percent slopes—Durorthic Natrargids, fine, montmorillonitic, mesic—30 percent
- Whirlo cobbly very fine sandy loam, 4 to 15 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Camborthids, 50 to 75 percent slopes—Lithic Xerollic Camborthids, loamy-skeletal, mixed, mesic—9 percent
- Inclusion 2: Durorthic Torriorthents, 2 to 8 percent slopes—Durorthic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—4 percent
- Inclusion 3: Rock outcrop—1 percent
- Inclusion 4: Rubble land—1 percent

### **Characteristics of the Koyunik Variant Soil**

*Position on landscape:* Side slopes of volcanic cones

*Parent material:* Kind—ash capped residuum; source—basalt

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, ephedra

*Surface cover:* 50 percent pebbles, 20 percent cobbles, 15 percent stones

### **Typical Profile**

0 to 5 inches—very gravelly sandy loam; 25 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

5 to 13 inches—very gravelly fine sandy loam, very gravelly sandy loam; 0 to 25 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-1

13 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 0.6 to 1.1 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.05; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 8 inches—cobbly very fine sandy loam; 15 to 30 percent cobbles and stones and 20 to 40 percent pebbles (by weight); platy structure; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4

8 to 34 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

34 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.8); nonsaline to slightly saline (2 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 34 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.1 to 7.0 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans and alluvial fans below hills

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—irregular

### **Typical Profile**

0 to 7 inches—cobbly very fine sandy loam; 15 to 25 percent cobbles and stones and 10 to 35 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

7 to 13 inches—gravelly sandy loam, gravelly loam, fine sandy loam; 0 to 10 percent cobbles and stones and 15 to 45 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM, GM, ML; estimated AASHTO classification—A-2, A-4

13 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 5 to 30 percent cobbles and stones and 50 to 75 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 3.9 to 5.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* North-facing side slopes of volcanic cones

*Contrasting features:* Slopes of more than 50 percent

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Areas adjacent to concave drainageways of fan piedmont remnants

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Shoulder slopes of volcanic cones

*Contrasting features:* Bedrock exposed at the soil surface of volcanic cones

*Distinctive present vegetation:* Barren

#### **Inclusion 4**

*Position on landscape:* Rock stringers on side slopes of volcanic cones

*Contrasting features:* More than 90 percent stones on the surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Koynik Variant soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Koynik Variant Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, slope, small stones

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope, depth to bedrock

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—slope, depth to bedrock

*Embankments, dikes, and levees:* Severe—seepage

**Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones, excess sodium

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

**Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—large stones, slope

*Local roads and streets:* Moderate—large stones, slope

*Roadfill:* Fair—large stones

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

**Interpretive Groups**

*Capability classification:* Koynik Variant soil—VIIs, nonirrigated; Oxcorel soil—VIIs, nonirrigated; Whirlo soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Koynik Variant soil—024X002N; Oxcorel soil—024X002N; Whirlo soil—024X002N

**1600—Dumps and Pits, mine****Map Unit Setting**

*Position on landscape:* Hills and fan piedmonts

*Elevation:* 4,800 to 7,900 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Dumps and Pits, mine—100 percent

**Characteristics of Pits and Dumps**

*Position on landscape:* Side slopes of hills and adjacent fan piedmonts

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Barren or annual grasses, forbs, and rabbitbrush

**1601—Pits, gravel****Map Unit Setting**

*Position on landscape:* Fan piedmonts or beach plains

*Elevation:* 4,400 to 6,800 feet

*Average annual precipitation:* About 7 to 12 inches

*Average annual air temperature:* About 42 to 48 degrees F

*Frost-free season:* About 80 to 120 days

**Composition**

*Major components:*

- Pits, gravel—100 percent

**Characteristics of Pits, Gravel**

*Position on landscape:* Fan piedmonts or beach plains

*Parent material:* Mixed alluvium or lacustrine beach deposits

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* None

**1662—Floer-Slaven-Roca association****Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,000 to 7,000 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 43 degrees F

*Frost-free season:* About 80 days

**Composition**

*Major components:*

- Floer gravelly silt loam, 8 to 15 percent slopes—Aridic Palexerolls, clayey-skeletal, montmorillonitic, frigid—45 percent
- Slaven loam, 15 to 30 percent slopes, very stony—Aridic Argixerolls, clayey-skeletal, montmorillonitic, frigid—20 percent
- Roca very gravelly loam, 30 to 50 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—20 percent

*Contrasting inclusions:*

- Inclusion 1: Glean gravelly silt loam, 30 to 75 percent slopes—Pachic Haploxerolls, loamy-skeletal, mixed, frigid—10 percent
- Inclusion 2: Linrose gravelly silt loam, 30 to 50 percent slopes—Aridic Haploxerolls, loamy-skeletal, mixed, frigid—3 percent
- Inclusion 3: Durixerollic Haplargids, 15 to 30 percent

slopes—Durixerollic Haplargids, loamy-skeletal, mixed, frigid—2 percent

### **Characteristics of the Floer Soil**

*Position on landscape:* East- and west-facing side slopes of mountains

*Parent material:* Kind—residuum influenced by loess; source—chert

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Low sagebrush, Idaho fescue

*Surface cover:* 30 percent pebbles, 5 percent cobbles and stones

### **Typical Profile**

0 to 12 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-4

12 to 50 inches—very cobbly clay, extremely stony clay; 45 to 55 percent cobbles and stones and 45 to 65 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

50 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 40 to 60 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 5.5 to 7.4 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.32; T value—3; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Moderate

### **Characteristics of the Slaven Soil**

*Position on landscape:* Upper, south-facing side slopes of mountains

*Parent material:* Kind—residuum influenced by loess and volcanic ash; source—chert and shale

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Thurber needlegrass

*Rock fragments on surface:* Kind—stones; percentage of surface covered—2

### **Typical Profile**

0 to 5 inches—loam; 10 to 25 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 22 inches—extremely gravelly clay, extremely gravelly sandy clay, extremely gravelly clay loam; 75 to 85 percent pebbles (by weight); subangular blocky structure; hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

22 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 2.0 to 2.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Roca Soil**

*Position on landscape:* Lower, south-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—concave to convex

*Dominant present vegetation:* Wyoming and mountain big sagebrush, bluegrass, bluebunch wheatgrass

### **Typical Profile**

0 to 5 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2

5 to 27 inches—very gravelly clay loam, very gravelly

clay; 0 to 15 percent cobbles and stones and 50 to 60 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper, concave, north-facing side slopes of mountains

*Contrasting features:* Thick, dark colored surface layer; higher water-supplying capacity from drifted snow

*Distinctive present vegetation:* Idaho fescue

#### Inclusion 2

*Position on landscape:* Upper, convex, north-facing side slopes of mountains

*Contrasting features:* Deep soils; very gravelly loam throughout the profile

*Distinctive present vegetation:* Idaho fescue

#### Inclusion 3

*Position on landscape:* Lower, north-facing side slopes of mountains

*Contrasting features:* Layer of weak silica accumulation

*Distinctive present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Floer soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Slaven soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Roca soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Floer Soil for Selected Uses

*Range seeding:* Fair—too arid, rooting depth

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—depth to bedrock, too clayey, slope

*Local roads and streets:* Severe—shrink-swell

*Roadfill:* Poor—shrink-swell

*Sand:* Improbable source—large stones, excess fines

*Gravel:* Improbable source—large stones, excess fines

*Topsoil:* Poor—small stones, area reclaim, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

### Ratings of the Slaven Soil for Selected Uses

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, too clayey, small stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Roca Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, too clayey

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Floer soil—VIIIs, nonirrigated; Slaven soil—VIIIs, nonirrigated; Roca soil—VIIIs, nonirrigated

*Range site:* Floer soil—024X027N; Slaven soil—025X014N; Roca soil—024X028N

## 1670—Wieland-Allor association

### Map Unit Setting

*Position on landscape:* Fan piedmonts

*Elevation:* 5,800 to 6,200 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Wieland loam, 2 to 8 percent slopes—Durixerollic Haplargids, fine, montmorillonitic, mesic—70 percent
- Allor very cobbly loam, 15 to 30 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Orovada fine sandy loam, 2 to 4 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—7 percent
- Inclusion 2: Xerollic Haplargids, 2 to 8 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—5 percent
- Inclusion 3: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—3 percent

### **Characteristics of the Wieland Soil**

*Position on landscape:* Broad summits of fan piedmont remnants

*Parent material:* Kind—alluvium; source—extrusive volcanic rock

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 8 inches—loam; 0 to 25 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4
- 8 to 20 inches—gravelly clay; 0 to 5 percent cobbles and stones and 25 to 45 percent pebbles (by weight); prismatic structure; hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7
- 20 to 60 inches or more—loam, gravelly loam, gravelly sandy loam; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.4); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, SM-SC; estimated AASHTO classification—A-4, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.0 to 9.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Allor Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail, spiny hopsage

### **Typical Profile**

- 0 to 12 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 30 to 55 percent pebbles (by weight); subangular blocky structure; soft, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-2, A-4
- 12 to 34 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-6, A-7
- 34 to 60 inches or more—gravelly loamy sand, very gravelly loamy sand; 0 to 10 percent cobbles and stones and 35 to 55 percent pebbles (by weight); massive; very hard, firm; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.7 to 6.0 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Inset fans

*Contrasting features:* Very gravelly sandy loam throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush, small rabbitbrush

#### **Inclusion 2**

*Position on landscape:* Foot slopes of adjacent hills

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, rubber rabbitbrush, Wyoming big sagebrush, basin wildrye

#### **Inclusion 3**

*Position on landscape:* Shoulder slopes of fan piedmont remnants

*Contrasting features:* Lacks layer of clay accumulation, gravelly sandy loam throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Wieland soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Allor soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### **Ratings of the Wieland Soil for Selected Uses**

*Range seeding:* Poor—rooting depth

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—area reclaim, small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Moderate—thin layer

### **Ratings of the Allor Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—cutbanks cave, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Fair—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Wieland soil—IIIe, irrigated, and VIs, nonirrigated; Allor soil—VIIIs, nonirrigated

*Range site:* Wieland soil—024X005N; Allor soil—024X005N

## **1671—Wieland-Oxcorel-Allor association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,500 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Wieland loam, 2 to 8 percent slopes—Durixerollic Haplargids, fine, montmorillonitic, mesic—50 percent
- Oxcorel gravelly fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—20 percent
- Allor very cobbly loam, 15 to 30 percent slopes—Durixerollic Haplargids, fine-loamy, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Durargids, 2 to 8 percent slopes—Xerollic Durargids, fine-loamy, mixed, mesic—5 percent
- Inclusion 2: Xerollic Durargids, 4 to 15 percent slopes—Xerollic Durargids, fine-loamy, mixed, mesic—4 percent
- Inclusion 3: Xeric Torriorthents, 15 to 50 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—3 percent
- Inclusion 4: Xerollic Camborthids, 0 to 4 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—3 percent

### **Characteristics of the Wieland Soil**

*Position on landscape:* Upper summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, Sandberg bluegrass

### Typical Profile

0 to 8 inches—loam; 0 to 25 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

8 to 20 inches—gravelly clay; 0 to 5 percent cobbles and stones and 25 to 45 percent pebbles (by weight); prismatic structure; hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7

20 to 60 inches or more—loam, gravelly loam, gravelly sandy loam; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); massive; hard, firm; moderately alkaline (pH 8.4); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, SM-SC; estimated AASHTO classification—A-4, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 6.0 to 9.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.49; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Oxcorel Soil

*Position on landscape:* Broad, lower summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

*Surface cover:* 25 percent pebbles, 5 percent cobbles

### Typical Profile

0 to 5 inches—gravelly fine sandy loam; 0 to 10 percent

cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4, A-2

5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 4.8 to 6.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### Characteristics of the Allor Soil

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—smooth to slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, small rabbitbrush, spiny hopsage

### Typical Profile

0 to 12 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 30 to 55 percent pebbles (by weight); subangular blocky structure; soft, very friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC;

estimated AASHTO classification—A-2, A-4  
 12 to 34 inches—gravelly clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-6, A-7  
 34 to 60 inches or more—gravelly loamy sand, very gravelly loamy sand; 0 to 10 percent cobbles and stones and 35 to 55 percent pebbles (by weight); massive; very hard, firm; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 4.7 to 6.0 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—8  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Highest summits of fan piedmont remnants  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Wyoming big sagebrush, small rabbitbrush

#### Inclusion 2

*Position on landscape:* North-facing, upper side slopes of fan piedmont remnants  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Black sagebrush, bottlebrush squirreltail

#### Inclusion 3

*Position on landscape:* Convex, eroded escarpments of fan piedmont remnants  
*Contrasting features:* Extremely gravelly throughout the profile  
*Distinctive present vegetation:* Indian ricegrass, Wyoming big sagebrush

### Inclusion 4

*Position on landscape:* Inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Basin wildrye, basin big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Wieland soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Allor soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Wieland Soil for Selected Uses

*Range seeding:* Poor—rooting depth  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—area reclaim, small stones  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Moderate—thin layer

### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, excess sodium, area reclaim  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Ratings of the Allor Soil for Selected Uses

*Range seeding:* Poor—large stones  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—cutbanks cave, slope  
*Local roads and streets:* Severe—slope

*Roadfill:* Fair—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Wieland soil—IIIe, irrigated, and VIs, nonirrigated; Oxcorel soil—IVs, irrigated, and VIIs, nonirrigated; Allor soil—VIIs, nonirrigated

*Range site:* Wieland soil—024X005N; Oxcorel soil—024X002N; Allor soil—024X005N

## **1673—Wieland-Grassval-Puett association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 6,000 to 6,400 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 105 days

### **Composition**

*Major components:*

- Wieland gravelly loam, 8 to 15 percent slopes—Durixerollic Haplargids, fine, montmorillonitic, mesic—40 percent

- Grassval gravelly loam, 2 to 8 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—25 percent

- Puett very gravelly loam, 30 to 50 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—20 percent

*Contrasting inclusions:*

- Inclusion 1: Haploxerollic Durargids, 2 to 8 percent slopes—Haploxerollic Durargids, loamy, mixed, mesic, shallow—7 percent

- Inclusion 2: Xeric Torriorthents, 30 to 50 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—4 percent

- Inclusion 3: Aridic Haploxerolls, 2 to 4 percent slopes—Aridic Haploxerolls, coarse-loamy, mixed, mesic—4 percent

### **Characteristics of the Wieland Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, pine bluegrass, Sandberg bluegrass

### **Typical Profile**

0 to 8 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL, SC; estimated AASHTO classification—A-6

8 to 20 inches—gravelly clay, clay; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); prismatic structure; hard, friable; moderately alkaline (pH 7.8); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7

20 to 60 inches or more—loam, gravelly loam, gravelly sandy loam; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.4); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, SM-SC; estimated AASHTO classification—A-4, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 5.7 to 9.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Grassval Soil**

*Position on landscape:* Summits and south-facing shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, small rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 4 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated

Unified classification—SM-SC; estimated AASHTO classification—A-2, A-4

4 to 13 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GC; estimated AASHTO classification—A-6

13 inches—indurated duripan; massive

### **Soil and Water Features**

*Depth to hardpan:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Puett Soil**

*Position on landscape:* Side slopes of fan piedmont remnants with a shallow rock core

*Parent material:* Kind—loamy residuum; source—soft, tuffaceous sedimentary formations

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, small rabbitbrush, Wyoming big sagebrush, Utah juniper

### **Typical Profile**

0 to 4 inches—very gravelly loam; 0 to 10 percent cobbles and stones and 50 to 60 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

4 to 15 inches—coarse sandy loam, gravelly sandy loam, loam; 10 to 50 percent pebbles (by weight); massive; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML, GM; estimated AASHTO classification—A-1, A-2, A-4

15 inches—weathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 1.7 to 2.1 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests of fan piedmont remnants

*Contrasting features:* Strongly cemented duripan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Wyoming big sagebrush, small rabbitbrush

#### **Inclusion 2**

*Position on landscape:* North-facing, upper elevation side slopes of fan piedmont remnants with a rock core

*Contrasting features:* Soft bedrock at a depth of 20 to 30 inches

*Distinctive present vegetation:* Singleleaf pinyon, Utah juniper, Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Inset fans

*Contrasting features:* Very deep soils, receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Wieland soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Grassval soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Puett soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Wieland Soil for Selected Uses**

*Range seeding:* Poor—rooting depth

*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey, slope  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Moderate—thin layer

#### **Ratings of the Grassval Soil for Selected Uses**

*Range seeding:* Poor—droughty, rooting depth  
*Daily cover for landfill:* Poor—cemented pan, small stones

*Shallow excavations:* Severe—cemented pan  
*Local roads and streets:* Severe—cemented pan  
*Roadfill:* Cemented pan  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—cemented pan, small stones  
*Pond reservoir areas:* Severe—cemented pan  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Puett Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones  
*Daily cover for landfill:* Poor—depth to bedrock, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock, slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—seepage, piping

#### **Interpretive Groups**

*Capability classification:* Wieland soil—VIs, nonirrigated;  
 Grassval soil—VIIIs, nonirrigated; Puett soil—VIIe, nonirrigated  
*Range site:* Wieland soil—024X005N; Grassval soil—024X030N; Puett soil—025X025N

### **1680—Zineb gravelly loam, 2 to 8 percent slopes**

#### **Map Unit Setting**

*Position on landscape:* Fan skirts  
*Elevation:* 4,800 to 5,300 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 46 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

##### *Major components:*

• Zineb gravelly loam, 2 to 8 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—85 percent

##### *Contrasting inclusions:*

• Inclusion 1: Whirlo gravelly very fine sandy loam, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—10 percent  
 • Inclusion 2: Xerollic Camborthids, 0 to 4 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

#### **Characteristics of the Zineb Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loamy mixed alluvium

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Wyoming big sagebrush, gray horsebrush, Sandberg bluegrass, bottlebrush squirreltail

*Surface cover:* 20 percent pebbles

#### **Typical Profile**

0 to 11 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4  
 11 to 20 inches—very gravelly sandy loam; 0 to 10 percent cobbles and stones and 55 to 75 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-2  
 20 to 45 inches—extremely cobbly loamy coarse sand, extremely cobbly coarse sand; 50 to 75 percent cobbles and stones or 55 to 85 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP, GP-GM; estimated AASHTO classification—A-1  
 45 to 60 inches or more—loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; hard, firm; strongly alkaline (pH 9.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.3 to 4.9 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Convex, lower margins of fan skirts

*Contrasting features:* Lacks layer of weak silica accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Concave inset fans emerging onto fan skirts

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Zineb Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action, large stones

*Roadfill:* Fair—large stones

*Sand:* Improbable source—thin layer

*Gravel:* Improbable source—thin layer

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, large stones

### **Interpretive Groups**

*Capability classification:* IVE, irrigated, and VIIs, nonirrigated

*Range site:* 024X005N

## **1682—Zineb-Doowak-Oxcurel association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,800 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Zineb gravelly loam, 0 to 2 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—60 percent
- Doowak very gravelly loamy sand, 0 to 2 percent slopes—Xeric Torriorthents, sandy-skeletal, mixed, mesic—15 percent
- Oxcurel gravelly silt loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent
- Inclusion 2: Xerollic Camborthids, 0 to 2 percent slopes—Xerollic Camborthids, coarse-loamy, mixed, mesic—3 percent
- Inclusion 3: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—2 percent

### **Characteristics of the Zineb Soil**

*Position on landscape:* Fan aprons

*Parent material:* Mixed alluvium

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass

### **Typical Profile**

0 to 11 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

11 to 20 inches—very gravelly sandy loam; 0 to 10 percent cobbles and stones and 45 to 75 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-2

- 20 to 45 inches—extremely cobbly loamy coarse sand, extremely cobbly coarse sand; 50 to 75 percent cobbles and stones or 55 to 85 percent pebbles (by weight); massive; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP, GP-GM; estimated AASHTO classification—A-1
- 45 to 60 inches or more—loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; hard, firm; strongly alkaline (pH 9.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.3 to 4.9 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Doowak Soil

*Position on landscape:* Inset fans  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### Typical Profile

- 0 to 6 inches—very gravelly loamy sand; 5 to 10 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM, GP-GM; estimated AASHTO classification—A-1
- 6 to 60 inches or more—stratified extremely gravelly sand to extremely gravelly loamy sand; 5 to 10 percent cobbles and stones and 75 to 90 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.0); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GP; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Very rapid  
*Available water capacity:* 1.9 to 3.0 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Very slow  
*Hydrologic group:* A  
*Erosion factors (surface layer):* K value—.05; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Oxcorel Soil

*Position on landscape:* Nonburied fan piedmont remnants  
*Parent material:* Mixed alluvium with a thin loess mantle  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

- 0 to 8 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4
- 8 to 34 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 15 to 30); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7
- 34 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard to soft, firm to very friable; strongly alkaline (pH 9.0); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 4.8 to 6.7 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Areas adjacent to channel banks

*Contrasting features:* Gravelly sandy loam throughout the profile; lacks layer of weak silica accumulation

*Distinctive present vegetation:* Wyoming big sagebrush, rabbitbrush

#### **Inclusion 2**

*Position on landscape:* Drainageways on fan aprons

*Contrasting features:* Gravelly loam throughout the profile

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Upper part of inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Zineb soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Doowak soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

#### **Ratings of the Zineb Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action, large stones

*Roadfill:* Fair—large stones

*Sand:* Improbable source—thin layer

*Gravel:* Improbable source—thin layer

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—seepage, large stones

#### **Ratings of the Doowak Soil for Selected Uses**

*Range seeding:* Poor—too sandy, droughty, small stones

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, too sandy

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### **Interpretive Groups**

*Capability classification:* Zineb soil—IVs, irrigated, and VIIs, nonirrigated; Doowak soil—VIIs, nonirrigated; Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated

*Range site:* Zineb soil—024X005N; Doowak soil—024X020N; Oxcorel soil—024X002N

## **2060—Oxcorel-Beoska-Whirlo association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Oxcorel very fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—40 percent

- Beoska silt loam, 0 to 4 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—30 percent

• Whirlo gravelly loam, 2 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—15 percent  
*Contrasting inclusions:*

• Inclusion 1: Xerollic Camborthids, 15 to 30 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

• Inclusion 2: Typic Torriorthents, 2 to 8 percent slopes—Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent

• Inclusion 3: Xerollic Camborthids, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Upper summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

5 to 34 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

34 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 34 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.0 to 6.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Beoska Soil**

*Position on landscape:* Lower summits of fan piedmont remnants

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 9 inches—silt loam; 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

9 to 18 inches—silt loam, silty clay loam; 0 to 25 percent pebbles (by weight); prismatic structure; hard, very friable; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

18 to 60 inches or more—stratified gravelly very fine sandy loam to gravelly sandy loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM, SM; estimated AASHTO classification—A-1, A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 18 inches—moderately slow; below this depth—moderately rapid

*Available water capacity:* 7.5 to 9.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Whirlo Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium strongly influenced by loess

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 12 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4

12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to moderately saline (2 to 8 mmhos/cm); nonsodic (SAR 5 to 13); estimated Unified classification—GM; estimated AASHTO classification—A-2, A-1

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GW-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.0 to 5.4 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave side slopes of fan piedmont remnants

*Contrasting features:* Slopes of 15 to 30 percent

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 2**

*Position on landscape:* Adjacent convex fan skirts

*Contrasting features:* Strongly saline-sodic surface layer

*Distinctive present vegetation:* Shadscale, black greasewood

#### **Inclusion 3**

*Position on landscape:* Areas adjacent to channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Beoska soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Beoska Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Fair—small stones

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess salt, excess sodium

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, excess sodium

**Ratings of the Whirlo Soil for Selected Uses***Range seeding:* Poor—too arid*Daily cover for landfill:* Poor—small stones, seepage*Shallow excavations:* Slight*Local roads and streets:* Slight*Roadfill:* Good*Sand:* Probable source*Gravel:* Probable source*Topsoil:* Poor—small stones, area reclaim*Pond reservoir areas:* Severe—seepage*Embankments, dikes, and levees:* Severe—seepage**Interpretive Groups***Capability classification:* Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated; Beoska soil—IVe, irrigated, and VIIs, nonirrigated; Whirlo soil—IVe, irrigated, and VIIs, nonirrigated*Range site:* Oxcorel soil—024X002N; Beoska soil—024X002N; Whirlo soil—024X002N**2061—Oxcorel-Whirlo-Dun Glen association****Map Unit Setting***Position on landscape:* Piedmont slopes*Elevation:* 4,600 to 5,300 feet*Average annual precipitation:* About 7 inches*Average annual air temperature:* About 49 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

- Oxcorel silt loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—40 percent
- Whirlo gravelly loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—30 percent
- Dun Glen gravelly loam, 2 to 4 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Typic Torriorthents, 2 to 4 percent slopes—Typic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—10 percent

**Characteristics of the Oxcorel Soil***Position on landscape:* Fan piedmont remnants*Parent material:* Mixed alluvium with a thin loess mantle*Slope features:* Length—long; shape—smooth*Dominant present vegetation:* Shadscale, bud sagebrush**Typical Profile**

0 to 8 inches—silt loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm);

nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

8 to 34 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

34 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

**Soil and Water Features***Depth to seasonal high water table:* More than 60 inches*Frequency of flooding:* None*Permeability:* In the upper 34 inches—very slow; below this depth—moderately rapid*Available water capacity:* 5.0 to 6.9 inches*Water-supplying capacity:* 7 inches*Runoff:* Slow*Hydrologic group:* D*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—5*Hazard of erosion:* By water—slight; by wind—slight*Shrink-swell potential:* Moderate*Corrosivity:* To steel—high; to concrete—moderate*Potential frost action:* Low**Characteristics of the Whirlo Soil***Position on landscape:* Fan aprons and inset fan remnants*Parent material:* Mixed alluvium influenced by loess*Slope features:* Length—short; shape—convex*Dominant present vegetation:* Shadscale, bud sagebrush**Typical Profile**

0 to 12 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4

12 to 24 inches—very gravelly loam, very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified

classification—GM; estimated AASHTO classification—A-2, A-1

24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 3.4 to 5.8 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Dun Glen Soil

*Position on landscape:* Fan skirts  
*Parent material:* Mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—long; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush  
*Surface cover:* 25 percent pebbles

### Typical Profile

0 to 4 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM; estimated AASHTO classification—A-4, A-2  
 4 to 60 inches or more—fine sandy loam, very fine sandy loam; 0 to 15 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 6.7 to 7.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Inset fans  
*Contrasting features:* Subject to flash floods  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Dun Glen soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim, too clayey

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### Ratings of the Whirlo Soil for Selected Uses

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Dun Glen Soil for Selected Uses**

*Range seeding:* Poor—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—flooding  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Fair—small stones  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

#### **Interpretive Groups**

*Capability classification:* Oxcorel soil—Ive, irrigated, and VIIs, nonirrigated; Whirlo soil—Ile, irrigated, and VIIc, nonirrigated; Dun Glen soil—Ile, irrigated, and VIIc, nonirrigated  
*Range site:* Oxcorel soil—024X002N; Whirlo soil—024X002N; Dun Glen soil—024X002N

### **2062—Oxcorel-Orovada association**

#### **Map Unit Setting**

*Position on landscape:* Fan piedmonts  
*Elevation:* 4,600 to 5,000 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Oxcorel gravelly loam, 2 to 8 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—60 percent
- Orovada gravelly very fine sandy loam, 2 to 8 percent slopes, rarely flooded—Durixerollic Camborthids, coarse-loamy, mixed, mesic—25 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Natrargids, 2 to 8 percent slopes—Durixerollic Natrargids, fine, montmorillonitic, mesic—8 percent
- Inclusion 2: Dun Glen very fine sandy loam, 2 to 4 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—7 percent

#### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—long; shape—smooth to slightly concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass, bottlebrush squirreltail

#### **Typical Profile**

- 0 to 5 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4
- 5 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7
- 36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 5.4 to 7.3 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Orovada Soil**

*Position on landscape:* Inset fans and fan drainageways  
*Parent material:* Loess influenced by volcanic ash over mixed alluvium  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Indian ricegrass, small rabbitbrush, bottlebrush squirreltail

#### **Typical Profile**

- 0 to 8 inches—gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); prismatic structure; slightly hard, very friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR

less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-2, A-4  
 8 to 20 inches—loam, fine sandy loam, very fine sandy loam; 5 to 25 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4  
 20 to 60 inches or more—stratified fine sandy loam to silt loam; 5 to 25 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderate  
*Available water capacity:* 8.4 to 9.6 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.37; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Upper margins of fan piedmont remnants  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### Inclusion 2

*Position on landscape:* Adjacent smooth fan skirts  
*Contrasting features:* Lacks layer of weak silica accumulation  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Wildlife habitat elements:

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Orovida soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, excess sodium, area reclaim  
*Pond reservoir areas:* Severe—seepage  
*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Ratings of the Orovida Soil for Selected Uses

*Range seeding:* Fair—too arid  
*Daily cover for landfill:* Good  
*Shallow excavations:* Slight  
*Local roads and streets:* Moderate—frost action, flooding  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones  
*Pond reservoir areas:* Moderate—seepage, slope  
*Embankments, dikes, and levees:* Severe—piping

### Interpretive Groups

*Capability classification:* Oxcorel soil—Ive, irrigated, and VIIs, nonirrigated; Orovida soil—IIIe, irrigated, and VIc, nonirrigated  
*Range site:* Oxcorel soil—024X002N; Orovida soil—024X020N

## 2064—Oxcorel-Misad association

### Map Unit Setting

*Position on landscape:* Fan piedmonts  
*Elevation:* 4,600 to 5,200 feet  
*Average annual precipitation:* About 7 inches  
*Average annual air temperature:* About 48 degrees F  
*Frost-free season:* About 110 days

### Composition

*Major components:*

- Oxcorel gravelly very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—60 percent
  - Misad gravelly fine sandy loam, 4 to 8 percent slopes—Durorthidic Torriorthents, loamy-skeletal, mixed (calcareous), mesic—25 percent
- Contrasting inclusions:*
- Inclusion 1: Xerollic Camborthids, 2 to 4 percent

slopes—Xerollic Camborthids, sandy-skeletal, mixed, mesic—10 percent

• Inclusion 2: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—smooth

*Dominant present vegetation:* Bud sagebrush, shadscale, Indian ricegrass

### **Typical Profile**

0 to 5 inches—gravelly fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM-GM; estimated AASHTO classification—A-4

5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; hard and soft, firm and very firm; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 4.8 to 6.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Misad Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—concave

*Dominant present vegetation:* Bud sagebrush, shadscale, Indian ricegrass

### **Typical Profile**

0 to 7 inches—gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM, SM-SC; estimated AASHTO classification—A-1, A-2

7 to 31 inches—stratified fine sandy loam to very gravelly sandy loam; 5 to 10 percent cobbles and stones and 40 to 60 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 20); estimated Unified classification—GM, GM-GC, SM, SM-SC; estimated AASHTO classification—A-1, A-2

31 to 60 inches or more—stratified very gravelly loamy sand to extremely gravelly coarse sandy loam; 5 to 10 percent cobbles and stones and 60 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.8); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 2.9 to 4.1 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Areas adjacent to channels

*Contrasting features:* Receives additional moisture from runoff and flooding

*Distinctive present vegetation:* Spiny hopsage

## **Inclusion 2**

*Position on landscape:* Fan drainageways

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

## **Major Uses**

**Current uses:** Rangeland, wildlife habitat

## **Wildlife habitat elements:**

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Misad soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

## **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

## **Ratings of the Misad Soil for Selected Uses**

*Range seeding:* Poor—too arid, small stones, excess salt

*Daily cover for landfill:* Poor—seepage, small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

## **Interpretive Groups**

*Capability classification:* Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated; Misad soil—IIIe, irrigated, and VIIs, nonirrigated

*Range site:* Oxcorel soil—024X002N; Misad soil—024X002N

## **2065—Oxcorel-Oxcorel, moderately steep-Pineval association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,000 to 5,700 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

### **Composition**

*Major components:*

- Oxcorel gravelly loam, 4 to 15 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—55 percent
- Oxcorel gravelly loam, 15 to 30 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—15 percent
- Pineval gravelly loam, 8 to 15 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durixerollic Camborthids, 4 to 15 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—9 percent
- Inclusion 2: Whirlo gravelly very fine sandy loam, 4 to 15 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—6 percent

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 5 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4

5 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight);

massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 5.3 to 7.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Oxcorel, Moderately Steep, Soil**

*Position on landscape:* South-facing side slopes of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush

### **Typical Profile**

0 to 3 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4  
 3 to 30 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7  
 30 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 30 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 5.1 to 7.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

### **Characteristics of the Pineval Soil**

*Position on landscape:* North-facing side slopes of fan piedmont remnants  
*Parent material:* Gravelly mixed alluvium  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, small rabbitbrush

### **Typical Profile**

0 to 5 inches—gravelly loam; 25 to 40 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, GM-GC; estimated AASHTO classification—A-4  
 5 to 11 inches—very gravelly loam, very gravelly clay loam; 50 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2  
 11 to 60 inches or more—stratified very gravelly sandy loam to extremely gravelly sand; 0 to 25 percent cobbles and stones and 50 to 80 percent pebbles (by weight); single grained; loose; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.0 to 4.2 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Concave upper inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail

#### **Inclusion 2**

*Position on landscape:* Concave lower inset fans

*Contrasting features:* Lacks layer of clay accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Oxcorel, moderately steep, soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Pineval soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey, slope

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Oxcorel, Moderately Steep, Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—low strength, shrink-swell, slope

*Roadfill:* Fair—slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Pineval Soil for Selected Uses**

*Range seeding:* Fair—too arid, droughty

*Daily cover for landfill:* Poor—seepage, too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action, slope

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—area reclaim, small stones

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Oxcorel soil—Ive, irrigated, and VIIs, nonirrigated; Oxcorel, moderately steep, soil—VIIe, nonirrigated; Pineval soil—Ive, irrigated, and VIIs, nonirrigated

*Range site:* Oxcorel soil—024X002N; Oxcorel, moderately steep, soil—024X002N; Pineval soil—024X005N

## **2066—Oxcorel-Broyles-Dun Glen association**

### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 4,700 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Oxcorel very fine sandy loam, 2 to 4 percent slopes—

Duric Natrargids, fine, montmorillonitic, mesic—35 percent

- Broyles very fine sandy loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—30 percent

- Dun Glen very fine sandy loam, 0 to 2 percent slopes—Typic Camborthids, coarse-loamy, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Duric Camborthids, 0 to 4 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—8 percent

- Inclusion 2: Xeric Torriorthents, 0 to 2 percent slopes—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—5 percent

- Inclusion 3: Whirlo cobbly very fine sandy loam, 4 to 8 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—2 percent

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 9 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

9 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.4 to 7.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Broyles Soil**

*Position on landscape:* Fan skirts

*Parent material:* Loess over mixed alluvium

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 11 inches—very fine sandy loam; 0 to 5 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.4); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4

11 to 60 inches or more—stratified loam to gravelly loamy sand; 5 to 40 percent pebbles (by weight); massive; hard, friable; very strongly alkaline (pH 9.2); slightly saline to moderately saline (4 to 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—SM; estimated AASHTO classification—A-2

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 6.3 to 7.5 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### **Characteristics of the Dun Glen Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—smooth to slightly concave

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### Typical Profile

0 to 4 inches—very fine sandy loam; 0 to 10 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML; estimated AASHTO classification—A-4

4 to 60 inches or more—fine sandy loam, very fine sandy loam; 0 to 15 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM; estimated AASHTO classification—A-4

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* Rare

*Permeability:* Moderate

*Available water capacity:* 6.7 to 7.9 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Very slow

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly convex lower margins of fan skirts

*Contrasting features:* Strongly saline-sodic surface layer

*Distinctive present vegetation:* Black greasewood, shadscale

#### Inclusion 2

*Position on landscape:* Areas adjacent to active channels

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Convex fan aprons

*Contrasting features:* Very gravelly substratum

*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

**Potential uses:** Rangeland; wildlife habitat; irrigated cropland, if irrigation water is made available

### Wildlife habitat elements:

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Broyles soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Dun Glen soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

### Ratings of the Broyles Soil for Selected Uses

*Range seeding:* Poor—too arid, excess salt

*Daily cover for landfill:* Fair—too sandy, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—piping

### Ratings of the Dun Glen Soil for Selected Uses

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—flooding

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Fair—small stones

*Pond reservoir areas:* Moderate—seepage

*Embankments, dikes, and levees:* Severe—piping

### ***Interpretive Groups***

*Capability classification:* Oxcorel soil—VIIIs, nonirrigated;

Broyles soil—IIs, irrigated, and VIIc, nonirrigated;

Dun Glen soil—IIC, irrigated, and VIIc, nonirrigated

*Range site:* Oxcorel soil—024X002N; Broyles soil—024X002N; Dun Glen soil—024X002N

## **2067—Oxcorel-Colbar-Stingdorn association**

### ***Map Unit Setting***

*Position on landscape:* Hills and interhill fans

*Elevation:* 5,300 to 5,800 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 105 days

### ***Composition***

*Major components:*

- Oxcorel very fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—50 percent
- Colbar cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—20 percent
- Stingdorn cobbly loam, 15 to 30 percent slopes—Typic Durargids, loamy-skeletal, mixed, mesic, shallow—15 percent

*Contrasting inclusions:*

- Inclusion 1: Malpais very cobbly loam, 15 to 30 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—8 percent
- Inclusion 2: Orovada fine sandy loam, 2 to 8 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Durixerollic Camborthids, 2 to 4 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—2 percent

### ***Characteristics of the Oxcorel Soil***

*Position on landscape:* Interhill fan remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—smooth to slightly convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### ***Typical Profile***

- 0 to 8 inches—very fine sandy loam; 0 to 5 percent cobbles and stones and 0 to 10 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—ML; estimated AASHTO classification—A-4
- 8 to 34 inches—clay, clay loam; 0 to 5 percent cobbles

and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

- 34 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

### ***Soil and Water Features***

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 34 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 5.4 to 7.3 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Slow

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.43; T value—5; wind erodibility group—3

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—moderate

*Potential frost action:* Low

### ***Characteristics of the Colbar Soil***

*Position on landscape:* East- and north-facing side slopes of hills

*Parent material:* Kind—colluvium over residuum; source—rhyolitic rocks

*Slope features:* Length—short; shape—slightly concave to convex

*Dominant present vegetation:* Wyoming big sagebrush, pine bluegrass, Indian ricegrass, bottlebrush squirreltail

### ***Typical Profile***

- 0 to 3 inches—cobbly loam; 35 to 45 percent cobbles and stones and 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4
- 3 to 22 inches—cobbly loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic

(SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6  
 22 to 26 inches—gravelly loam, cobbly loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4  
 26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.3 to 3.8 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Stingdorn Soil**

*Position on landscape:* West- and south-facing side slopes of hills  
*Parent material:* Kind—residuum; source—rhyolitic rocks  
*Slope features:* Length—short; shape—slightly concave to convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

0 to 7 inches—cobbly loam; 25 to 40 percent cobbles and stones and 10 to 25 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4  
 7 to 15 inches—very cobbly clay loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC; estimated AASHTO classification—A-6  
 15 to 20 inches—indurated duripan; massive  
 20 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 8 to 20 inches  
*Depth to bedrock:* 8 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.6 to 2.0 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* South-facing side slopes of adjacent fan skirt remnants

*Contrasting features:* Deep soils that have a very gravelly loam subsoil

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Slightly concave to smooth, lower inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 3**

*Position on landscape:* Concave to smooth, narrow, upper inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Oxcurel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor

*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Stingdorn soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Oxcurel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium

*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, too clayey, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Colbar Soil for Selected Uses**

*Range seeding:* Fair—droughty, large stones, too arid

*Daily cover for landfill:* Poor—depth to bedrock, slope, large stones

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—slope, large stones

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Moderate—large stones, piping

#### **Ratings of the Stingdorn Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

*Shallow excavations:* Severe—depth to bedrock, cemented pan, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, large stones, cemented pan

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Interpretive Groups**

*Capability classification:* Oxcorel soil—VIIIs, nonirrigated; Colbar soil—VIe, nonirrigated; Stingdorn soil—VIIe, nonirrigated

*Range site:* Oxcorel soil—024X002N; Colbar soil—024X005N; Stingdorn soil—024X002N

### **2068—Oxcorel-Golconda-Whirlo association**

#### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 4,700 to 5,500 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Oxcorel gravelly very fine sandy loam, 2 to 4 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—50 percent

- Golconda gravelly very fine sandy loam, 2 to 4 percent slopes—Haplic Nadurargids, fine-loamy, mixed, mesic—20 percent

- Whirlo very gravelly very fine sandy loam, 2 to 4 percent slopes—Typic Camborthids, loamy-skeletal, mixed, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Broyles silt loam, 0 to 2 percent slopes—Duric Camborthids, coarse-loamy, mixed, mesic—6 percent

- Inclusion 2: Xerollic Camborthids, 2 to 4 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent

- Inclusion 3: Durixerollic Haplargids, 0 to 2 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—4 percent

#### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Summits of lower fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass

#### **Typical Profile**

0 to 5 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, GM; estimated AASHTO classification—A-4

5 to 36 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); moderately sodic (SAR 30 to 40); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

36 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH

8.8); slightly saline (4 to 8 mmhos/cm); strongly sodic (SAR 46 to 60); estimated Unified classification—GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 36 inches—very slow; below this depth—moderately rapid  
*Available water capacity:* 4.4 to 7.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—high  
*Potential frost action:* Low

#### **Characteristics of the Golconda Soil**

*Position on landscape:* Summits of upper fan piedmont remnants  
*Parent material:* Loess influenced by volcanic ash over mixed alluvium  
*Slope features:* Length—long; shape—smooth to convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 10 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 35 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4  
 10 to 23 inches—clay loam, gravelly clay loam, silty clay loam; 10 to 45 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 9.0); strongly saline (more than 16 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—CL, GC; estimated AASHTO classification—A-6, A-7  
 23 to 36 inches—strongly cemented duripan  
 36 to 60 inches or more—very gravelly loamy coarse sand, very gravelly sandy loam; 50 to 75 percent pebbles (by weight); massive; hard, firm; strongly alkaline (pH 8.6); moderately saline (8 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to hardpan:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 4.2 to 5.1 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—moderate  
*Potential frost action:* Low

#### **Characteristics of the Whirlo Soil**

*Position on landscape:* Fan skirts  
*Parent material:* Mixed alluvium influenced by loess  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 12 inches—very gravelly very fine sandy loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.1); nonsaline (2 to 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—ML, GM; estimated AASHTO classification—A-4  
 12 to 24 inches—very gravelly fine sandy loam, very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); massive; slightly hard, very friable; strongly alkaline (pH 8.6); slightly saline (4 to 8 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
 24 to 60 inches or more—stratified very gravelly loam to extremely gravelly coarse sandy loam; 0 to 5 percent cobbles and stones and 65 to 80 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); slightly saline to moderately saline (4 to 16 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GW-GM, GP-GM; estimated AASHTO classification—A-1

#### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 4.7 to 5.9 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.28; T value—5; wind erodibility group—4  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower part of inset fan remnants  
*Contrasting features:* Coarse-loamy throughout the profile  
*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Concave, active inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 3**

*Position on landscape:* Inset fans remnants  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Golconda soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Whirlo soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Oxcorel Soil for Selected Uses**

*Range seeding:* Poor—too arid, rooting depth, excess sodium  
*Daily cover for landfill:* Poor—small stones, cemented pan, seepage  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, excess sodium, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Golconda Soil for Selected Uses**

*Range seeding:* Poor—too arid, excess salt, excess sodium

*Daily cover for landfill:* Poor—area reclaim, seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—excess salt, seepage

#### **Ratings of the Whirlo Soil for Selected Uses**

*Range seeding:* Poor—too arid

*Daily cover for landfill:* Poor—small stones, seepage

*Shallow excavations:* Slight

*Local roads and streets:* Slight

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim, excess salt

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

### **Interpretive Groups**

*Capability classification:* Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated; Golconda soil—IVe, irrigated, and VIIs, nonirrigated; Whirlo soil—Ile, irrigated, and VIIc, nonirrigated

*Range site:* Oxcorel soil—024X002N; Golconda soil—024X002N; Whirlo soil—024X002N

## **2069—Oxcorel-Rednik-Veta association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 4,600 to 5,000 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### **Composition**

*Major components:*

- Oxcorel gravelly silt loam, 4 to 8 percent slopes—

Duric Natrargids, fine, montmorillonitic, mesic—40 percent

- Rednik very gravelly sandy loam, 8 to 15 percent slopes—Typic Haplargids, loamy-skeletal, mixed, mesic—25 percent
- Veta very gravelly fine sandy loam, 2 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—20 percent

*Contrasting inclusions:*

- Inclusion 1: Xeric Torriorthents, 4 to 15 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 2: Xerollic Haplargids, 8 to 15 percent slopes—Xerollic Haplargids, clayey-skeletal, mixed, mesic—5 percent
- Inclusion 3: Typic Haplargids, 4 to 15 percent slopes—Typic Haplargids, fine-loamy, mixed, mesic—5 percent

### **Characteristics of the Oxcorel Soil**

*Position on landscape:* Summits of fan piedmont remnants

*Parent material:* Mixed alluvium influenced by loess

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 5 inches—gravelly silt loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4
- 5 to 20 inches—clay, clay loam; 0 to 5 percent cobbles and stones and 10 to 20 percent pebbles (by weight); prismatic structure; hard, firm; strongly alkaline (pH 8.8); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7
- 20 to 60 inches or more—very gravelly sandy loam, very gravelly loam; 0 to 15 percent cobbles and stones and 50 to 75 percent pebbles (by weight); massive; hard and soft, firm and very friable; strongly alkaline (pH 8.8); slightly saline (4 to 8 mmhos/cm); moderately sodic (SAR 25 to 46); estimated Unified classification—GM; estimated AASHTO classification—A-1

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* In the upper 20 inches—very slow; below this depth—moderately rapid

*Available water capacity:* 4.8 to 6.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—high

*Potential frost action:* Low

### **Characteristics of the Rednik Soil**

*Position on landscape:* Side slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail

### **Typical Profile**

- 0 to 5 inches—very gravelly sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-1
- 5 to 16 inches—very gravelly sandy loam, extremely gravelly loam, very gravelly sandy clay loam; 5 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; hard, friable; strongly alkaline (pH 8.9); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GC; estimated AASHTO classification—A-2
- 16 to 47 inches—very gravelly sandy loam; very gravelly fine sandy loam; 5 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); massive; soft, very friable; strongly alkaline (pH 9.0); slightly saline (4 to 8 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GM; estimated AASHTO classification—A-1
- 47 to 60 inches or more—very gravelly sand, extremely gravelly loamy sand; 5 to 30 percent cobbles and stones and 40 to 75 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 9.0); nonsaline (less than 4 mmhos/cm); slightly sodic (SAR 13 to 25); estimated Unified classification—GP, GP-GM, SP-SM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* In the upper 16 inches—moderately slow; below this depth—very rapid  
*Available water capacity:* 2.0 to 3.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Slow  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.20; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Veta Soil

*Position on landscape:* Inset fans  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—smooth  
*Dominant present vegetation:* Wyoming big sagebrush, Thurber needlegrass, bottlebrush squirreltail  
*Surface cover:* 25 percent pebbles, 5 percent cobbles

### Typical Profile

0 to 4 inches—very gravelly fine sandy loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1  
 4 to 20 inches—very gravelly sandy loam, extremely gravelly loam; 10 to 30 percent cobbles and stones and 50 to 70 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
 20 to 60 inches or more—stratified extremely gravelly loamy sand to very gravelly loam; 10 to 25 percent cobbles and stones and 50 to 80 percent pebbles (by weight); massive; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* Rare  
*Permeability:* Moderately rapid

*Available water capacity:* 2.5 to 5.0 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.10; T value—5; wind erodibility group—5  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Fan aprons  
*Contrasting features:* Rapid permeability throughout the profile, receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Fan drainageways  
*Contrasting features:* Receives additional moisture from runoff, very gravelly clay loam subsoil  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Upper margins of fan piedmont remnants  
*Contrasting features:* Clay loam subsoil  
*Distinctive present vegetation:* shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Oxcorel soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Rednik soil for named elements:* Wild herbaceous plants (nonirrigated)—very poor; shrubs (nonirrigated)—very poor  
*Suitability of the Veta soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Oxcorel Soil for Selected Uses

*Range seeding:* Poor—too arid, rooting depth, excess sodium  
*Daily cover for landfill:* Poor—small stones  
*Shallow excavations:* Moderate—too clayey  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, excess sodium, area reclaim  
*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage, excess sodium

#### **Ratings of the Rednik Soil for Selected Uses**

*Range seeding:* Poor—too arid, small stones, excess sodium

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—large stones, slope

*Roadfill:* Fair—large stones

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—seepage

#### **Ratings of the Veta Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—seepage, small stones

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—flooding, frost action

*Roadfill:* Good

*Sand:* Probable source

*Gravel:* Probable source

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—seepage

*Embankments, dikes, and levees:* Severe—seepage

#### **Interpretive Groups**

*Capability classification:* Oxcorel soil—IVe, irrigated, and VIIs, nonirrigated; Rednik soil—VIIs, nonirrigated; Veta soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Oxcorel soil—024X002N; Rednik soil—024X002N; Veta soil—024X005N

### **2090—Punchbowl-Robson-Reluctan association**

#### **Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,200 to 7,400 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 90 days

#### **Composition**

*Major components:*

- Punchbowl cobbly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—50 percent
- Robson very cobbly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—20 percent
- Reluctan very cobbly loam, 30 to 50 percent slopes—

Aridic Argixerolls, fine-loamy, mixed, frigid—15 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xerollic Haplargids, 4 to 15 percent slopes—Lithic Xerollic Haplargids, clayey, montmorillonitic, frigid—6 percent
- Inclusion 2: Rock outcrop—6 percent
- Inclusion 3: Aridic Argixerolls, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—3 percent

#### **Characteristics of the Punchbowl Soil**

*Position on landscape:* South-facing summits, shoulders, and side slopes of mountains

*Parent material:* Kind—residuum; source—rhyolitic tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, Sandberg bluegrass, small rabbitbrush, bottlebrush squirreltail

#### **Typical Profile**

0 to 3 inches—cobbly loam; 25 to 40 percent cobbles and stones and 15 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

3 to 7 inches—gravelly loam, loam; 0 to 5 percent cobbles and stones and 5 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL, GC; estimated AASHTO classification—A-6

7 to 11 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

11 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.2 to 1.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Robson Soil**

*Position on landscape:* West-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, small rabbitbrush, black sagebrush

### **Typical Profile**

0 to 10 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC, SM-SC, SC; estimated AASHTO classification—A-2

10 to 14 inches—very cobbly clay loam; 30 to 45 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, firm; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-7

14 to 19 inches—very cobbly clay, extremely cobbly clay; 50 to 80 percent cobbles and stones and 35 to 50 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, GM; estimated AASHTO classification—A-7

19 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 12 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 0.9 to 1.9 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Reluctan Soil**

*Position on landscape:* North- and east-facing side slopes of mountains

*Parent material:* Kind—colluvium over residuum; source—rhyolitic rocks

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, Sandberg bluegrass, Idaho fescue, balsamroot

### **Typical Profile**

0 to 8 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 40 to 55 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4, A-2

8 to 33 inches—gravelly clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); subangular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

33 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.5 to 7.4 inches

*Water-supplying capacity:* 12 inches

*Runoff:* Medium

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Crests of mountains

*Contrasting features:* Clay subsoil

*Distinctive present vegetation:* Black sagebrush, low sagebrush

#### **Inclusion 2**

*Position on landscape:* Scattered peaks of mountains

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

**Inclusion 3**

*Position on landscape:* North- and west-facing back slopes of mountains

*Contrasting features:* Bedrock at a depth of more than 40 inches

*Distinctive present vegetation:* Black sagebrush, Idaho fescue

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Punchbowl soil for named elements:*

Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Robson soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Reluctan soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Punchbowl Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Robson Soil for Selected Uses**

*Range seeding:* Poor—droughty, large stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

*Shallow excavations:* Severe—depth to bedrock, large stones, slope

*Local roads and streets:* Severe—depth to bedrock, large stones, slope

*Roadfill:* Poor—depth to bedrock, large stones, slope

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

**Ratings of the Reluctan Soil for Selected Uses**

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Punchbowl soil—VIIIs, nonirrigated; Robson soil—VIIIs, nonirrigated; Reluctan soil—VIIIs, nonirrigated

*Range site:* Punchbowl soil—024X030N; Robson soil—024X018N; Reluctan soil—024X021N

**2091—Punchbowl-Teguro-Sumine association****Map Unit Setting**

*Position on landscape:* Mountains

*Elevation:* 6,300 to 7,000 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 90 days

**Composition**

*Major components:*

- Punchbowl very gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—35 percent
  - Teguro very gravelly loam, 30 to 50 percent slopes—Lithic Argixerolls, loamy, mixed, frigid—25 percent
  - Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—25 percent
- Contrasting inclusions:*
- Inclusion 1: Aridic Argixerolls, 50 to 75 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 2: Cumulic Haploxerolls, 2 to 8 percent slopes—Cumulic Haploxerolls, loamy-skeletal, mixed, frigid—5 percent
  - Inclusion 3: Rubble land—3 percent
  - Inclusion 4: Rock outcrop—2 percent

**Characteristics of the Punchbowl Soil**

*Position on landscape:* South- and west-facing shoulders and side slopes of mountains

*Parent material:* Kind—residuum; source—rhyolitic tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, bluebunch wheatgrass, pine bluegrass, small rabbitbrush

### Typical Profile

- 0 to 3 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 3 to 7 inches—gravelly loam, loam; 0 to 5 percent cobbles and stones and 5 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL, GC; estimated AASHTO classification—A-6
- 7 to 11 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7
- 11 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 8 to 14 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.2 to 1.6 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Teguro Soil

*Position on landscape:* Crests and upper side slopes of mountains  
*Parent material:* Kind—residuum; source—tuff  
*Slope features:* Length—short; shape—slightly concave  
*Dominant present vegetation:* Utah juniper, Idaho fescue, mountain big sagebrush, pine bluegrass, singleleaf pinyon  
*Surface cover:* 55 percent pebbles

### Typical Profile

- 0 to 4 inches—very gravelly loam; 0 to 5 percent cobbles and stones and 50 to 65 percent pebbles

(by weight); platy structure; slightly hard, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

- 4 to 16 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 25 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC; estimated AASHTO classification—A-2, AS-6

16 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.0 to 2.6 inches  
*Water-supplying capacity:* 10 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Sumine Soil

*Position on landscape:* North- and east-facing side slopes of mountains  
*Parent material:* Kind—colluvium over residuum; source—breccia and quartzite  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Mountain big sagebrush, bluebunch wheatgrass, Idaho fescue, bluegrass, arrowleaf balsamroot

### Typical Profile

- 0 to 6 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4
- 6 to 28 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC;

estimated AASHTO classification—A-2, A-6, A-7  
28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 2.8 to 4.1 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave, north-facing side slopes of mountains  
*Contrasting features:* Slopes of 50 to 75 percent  
*Distinctive present vegetation:* Idaho fescue, Utah juniper

#### Inclusion 2

*Position on landscape:* Concave drainageways, below springs, and along canyon bottoms of mountains  
*Contrasting features:* Deep soils that have a thick, dark colored surface layer  
*Distinctive present vegetation:* Basin wildrye, bluegrass, basin big sagebrush

#### Inclusion 3

*Position on landscape:* Scree slopes below rock outcrop  
*Contrasting features:* More than 90 percent stones on the surface  
*Distinctive present vegetation:* Barren

#### Inclusion 4

*Position on landscape:* Rimrock and shoulder slopes of mountains  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

### Woodland on the Teguro soil:

*Site index for common trees:* Singleleaf pinyon—45; Utah juniper—45  
*Most important native understory plants:* Idaho fescue, mountain big sagebrush, serviceberry, oceanspray, bluegrass

### Wildlife habitat elements:

*Suitability of the Punchbowl soil for named elements:*

Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Teguro soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; coniferous plants (nonirrigated)—poor; shrubs (nonirrigated)—fair

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Punchbowl Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Teguro Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Sumine Soil for Selected Uses

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Punchbowl soil—VIIIs,

nonirrigated; Teguro soil—VIIIs, nonirrigated;  
Sumine soil—VIIIs, nonirrigated

*Range site:* Punchbowl soil—024X030N; Teguro soil—  
025X062N; Sumine soil—024X029N

*Woodland suitability group:* Teguro soil—1R

## 2092—Punchbowl-Belate-Reluctan association

### Map Unit Setting

*Position on landscape:* Mountains

*Elevation:* 6,400 to 7,700 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 75 days

### Composition

*Major components:*

- Punchbowl gravelly loam, 30 to 50 percent slopes—  
Lithic Xerollic Haplargids, loamy, mixed, frigid—50  
percent
- Belate very gravelly loam, 30 to 50 percent slopes—  
Aridic Argixerolls, loamy-skeletal, mixed, frigid—20  
percent
- Reluctan very gravelly loam, 15 to 30 percent  
slopes—Aridic Argixerolls, fine-loamy, mixed, frigid—15  
percent

*Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Xerollic Haplargids, 15 to 50 percent  
slopes—Xerollic Haplargids, loamy-skeletal, mixed,  
frigid—4 percent
- Inclusion 3: Durixerollic Camborthids, 8 to 15 percent  
slopes—Durixerollic Camborthids, loamy-skeletal,  
mixed, frigid—3 percent
- Inclusion 4: Rubble land—2 percent

### Characteristics of the Punchbowl Soil

*Position on landscape:* Crests, shoulders, and upper  
side slopes of mountains

*Parent material:* Kind—residuum; source—andesite and  
rhyolite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, small  
rabbitbrush, bluegrass, singleleaf pinyon, Utah  
juniper

### Typical Profile

0 to 3 inches—gravelly loam; 5 to 10 percent cobbles  
and stones and 25 to 40 percent pebbles (by  
weight); platy structure; slightly hard, very friable;  
mildly alkaline (pH 7.6); nonsaline (less than 2  
mmhos/cm); nonsodic (SAR less than 2); estimated

Unified classification—SM; estimated AASHTO  
classification—A-4, A-2

3 to 6 inches—gravelly loam, loam; 0 to 5 percent  
cobbles and stones and 5 to 35 percent pebbles (by  
weight); subangular blocky structure; slightly hard,  
friable; mildly alkaline (pH 7.8); nonsaline (less than  
2 mmhos/cm); nonsodic (SAR less than 2);  
estimated Unified classification—SC, CL, GC;  
estimated AASHTO classification—A-6

6 to 10 inches—gravelly clay loam, gravelly sandy clay  
loam; 0 to 5 percent cobbles and stones and 40 to  
50 percent pebbles (by weight); angular blocky  
structure; hard, friable; moderately alkaline (pH 8.2);  
nonsaline (less than 2 mmhos/cm); nonsodic (SAR  
less than 2); estimated Unified classification—GC;  
estimated AASHTO classification—A-6, A-7

10 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.2 to 1.6 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—  
1; wind erodibility group—6

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Belate Soil

*Position on landscape:* North-facing side slopes of  
mountains

*Parent material:* Kind—colluvium; source—ash flow tuffs  
and andesite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Low sagebrush, small  
rabbitbrush, bluegrass, Idaho fescue

### Typical Profile

0 to 14 inches—very gravelly loam; 5 to 15 percent  
cobbles and stones and 50 to 65 percent pebbles  
(by weight); subangular blocky structure; slightly  
hard, friable; neutral (pH 7.0); nonsaline (less than  
2 mmhos/cm); nonsodic (SAR less than 2);  
estimated Unified classification—GM-GC; estimated  
AASHTO classification—A-2

14 to 60 inches or more—very gravelly loam, very  
gravelly clay loam; 5 to 10 percent cobbles and  
stones and 50 to 65 percent pebbles (by weight);

angular blocky structure; hard, friable; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 6.9 to 8.6 inches  
*Water-supplying capacity:* 12 inches  
*Runoff:* Rapid  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.24; T value—5; wind erodibility group—7  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Reluctant Soil

*Position on landscape:* Lower side slopes of mountains  
*Parent material:* Kind—gravely colluvium over residuum; source—rhyolitic rocks  
*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, pine bluegrass, Idaho fescue

### Typical Profile

0 to 8 inches—very gravelly loam; 10 to 25 percent cobbles and stones and 45 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; mildly alkaline (pH 7.5); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-4, A-2  
 8 to 33 inches—gravely clay loam, gravelly loam; 0 to 15 percent cobbles and stones and 25 to 40 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7  
 33 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.4 to 4.6 inches  
*Water-supplying capacity:* 12 inches

*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Scattered peaks of mountains  
*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### Inclusion 2

*Position on landscape:* Convex lower side slopes of mountains  
*Contrasting features:* Deep soils that have a thin surface layer

*Distinctive present vegetation:* Black sagebrush

#### Inclusion 3

*Position on landscape:* Foot slopes of mountains  
*Contrasting features:* Deep soils that receive additional moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### Inclusion 4

*Position on landscape:* Rock stringers on side slopes of mountains  
*Contrasting features:* More than 90 percent stones on the surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Punchbowl soil for named elements:*  
 Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Belate soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Reluctant soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Punchbowl Soil for Selected Uses

*Range seeding:* Poor—droughty, erodes easily  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—slope, depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—depth to bedrock, small stones, slope  
*Pond reservoir areas:* Severe—depth to bedrock, slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Belate Soil for Selected Uses**

*Range seeding:* Poor—small stones, erodes easily  
*Daily cover for landfill:* Poor—small stones, slope  
*Shallow excavations:* Severe—slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—slope  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Slight

#### **Ratings of the Reluctan Soil for Selected Uses**

*Range seeding:* Poor—small stones  
*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope  
*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, slope  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Punchbowl soil—VIIe, nonirrigated; Belate soil—VIIs, nonirrigated; Reluctan soil—VIIs, nonirrigated  
*Range site:* Punchbowl soil—024X030N; Belate soil—024X027N; Reluctan soil—024X021N

### **2094—Punchbowl-Jung-Locane association**

#### **Map Unit Setting**

*Position on landscape:* Hills  
*Elevation:* 6,300 to 7,000 feet  
*Average annual precipitation:* About 9 inches  
*Average annual air temperature:* About 46 degrees F  
*Frost-free season:* About 90 days

#### **Composition**

##### *Major components:*

- Punchbowl very gravelly loam, 15 to 50 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—35 percent
- Jung very cobbly loam, 8 to 30 percent slopes—Lithic

Xerollic Haplargids, clayey-skeletal, montmorillonitic, mesic—30 percent

- Locane very gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—20 percent

##### *Contrasting inclusions:*

- Inclusion 1: Rock outcrop—6 percent
- Inclusion 2: Durixerollic Camborthids, 4 to 15 percent slopes—Durixerollic Camborthids, coarse-loamy, mixed, mesic—5 percent
- Inclusion 3: Lithic Natrargids, 15 to 50 percent slopes—Lithic Natrargids, clayey-skeletal, montmorillonitic, mesic—4 percent

#### **Characteristics of the Punchbowl Soil**

*Position on landscape:* Lower north- and upper east- and west-facing side slopes of hills

*Parent material:* Kind—residuum; source—ash flow tuffs

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, bottlebrush squirreltail, bluegrass, small rabbitbrush, singleleaf pinyon

#### **Typical Profile**

- 0 to 3 inches—very gravelly loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2
- 3 to 7 inches—gravelly loam, loam; 0 to 5 percent cobbles and stones and 5 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL, GC; estimated AASHTO classification—A-6
- 7 to 11 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7
- 11 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.2 to 1.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Jung Soil**

*Position on landscape:* South- and lower east- and west-facing side slopes of hills

*Parent material:* Kind—residuum; source—ash flow tuffs

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Black sagebrush, bottlebrush squirreltail, small rabbitbrush, ephedra

### **Typical Profile**

0 to 8 inches—very cobbly loam; 35 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); platy structure; soft, very friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4

8 to 19 inches—very cobbly clay loam, very gravelly clay loam, very cobbly clay; 15 to 40 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; very hard, firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GC; estimated AASHTO classification—A-7

19 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.9 to 2.4 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Locane Soil**

*Position on landscape:* Upper, north-facing side slopes of hills

*Parent material:* Kind—residuum; source—tuffaceous conglomerate

*Slope features:* Length—long; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, bottlebrush squirreltail, bluegrass

### **Typical Profile**

0 to 6 inches—very gravelly loam; 5 to 15 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

6 to 14 inches—very gravelly clay loam; 0 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6, A-7

14 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 1.4 to 1.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Scattered peaks of hills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

#### **Inclusion 2**

*Position on landscape:* Foot slopes of hills

*Contrasting features:* Very deep

*Distinctive present vegetation:* Wyoming big sagebrush, small rabbitbrush

#### **Inclusion 3**

*Position on landscape:* Slightly concave, south-facing side slopes of hills

*Contrasting features:* Sodium-affected layer of clay accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush, small rabbitbrush, bottlebrush squirreltail

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Punchbowl soil for named elements:*  
Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Jung soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Locane soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Punchbowl Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Jung Soil for Selected Uses

*Range seeding:* Poor—droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### Ratings of the Locane Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Punchbowl soil—VIIIs, nonirrigated; Jung soil—VIIIs, nonirrigated; Locane soil—VIIIs, nonirrigated

*Range site:* Punchbowl soil—024X030N; Jung soil—028B016N; Locane soil—028B010N

## 2098—Punchbowl-Clan Alpine-Sumine association

### Map Unit Setting

*Position on landscape:* Mountains

*Elevation:* 7,000 to 7,600 feet

*Average annual precipitation:* About 12 inches

*Average annual air temperature:* About 44 degrees F

*Frost-free season:* About 90 days

### Composition

#### Major components:

- Punchbowl cobbly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—40 percent
  - Clan Alpine very cobbly loam, 30 to 50 percent slopes—Typic Argixerolls, loamy-skeletal, mixed, frigid—30 percent
  - Sumine very gravelly loam, 30 to 50 percent slopes—Aridic Argixerolls, loamy-skeletal, mixed, frigid—15 percent
- Contrasting inclusions:*
- Inclusion 1: Xerollic Haplargids, 15 to 30 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, frigid—7 percent
  - Inclusion 2: Rock outcrop—4 percent
  - Inclusion 3: Lithic Argixerolls, 15 to 30 percent slopes—Lithic Argixerolls, loamy-skeletal, mixed, frigid—3 percent
  - Inclusion 4: Rubble land—1 percent

### Characteristics of the Punchbowl Soil

*Position on landscape:* Lower, south- and west-facing crests and side slopes of mountains

*Parent material:* Kind—residuum; source—rhyolitic tuffs and andesite

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, Sandberg bluegrass, phlox, singleleaf pinyon

### Typical Profile

0 to 3 inches—cobbly loam; 25 to 40 percent cobbles

and stones and 15 to 30 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-4

3 to 7 inches—gravelly loam, loam; 0 to 5 percent cobbles and stones and 5 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL, GC; estimated AASHTO classification—A-6

7 to 11 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

11 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Slow

*Available water capacity:* 1.2 to 1.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Clanalpine Soil**

*Position on landscape:* North- and west-facing side slopes of mountains

*Parent material:* Kind—colluvium over residuum; source—rhyolitic and andesite

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Singleleaf pinyon, mountainmahogany, bluegrass, Idaho fescue

#### **Typical Profile**

0 to 12 inches—very cobbly loam; 25 to 40 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; soft, very friable; neutral (pH 6.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated

Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4

12 to 38 inches—very cobbly clay loam, very cobbly loam, very gravelly clay loam; 15 to 35 percent cobbles and stones and 40 to 65 percent pebbles (by weight); angular blocky structure; hard, friable; neutral (pH 7.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

38 inches—weathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 4.2 to 4.8 inches

*Water-supplying capacity:* 14 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—severe; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—moderate; to concrete—low

*Potential frost action:* Moderate

#### **Characteristics of the Sumine Soil**

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—very gravelly colluvium over residuum; source—breccia and quartzite

*Slope features:* Length—long; shape—concave

*Dominant present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, Thurber needlegrass, bluegrass, Idaho fescue

#### **Typical Profile**

0 to 6 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 40 to 55 percent pebbles (by weight); granular structure; soft, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2, A-4

6 to 28 inches—very gravelly loam, very cobbly clay loam; 15 to 40 percent cobbles and stones and 35 to 65 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC;

estimated AASHTO classification—A-2, A-6, A-7  
28 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.8 to 4.1 inches  
*Water-supplying capacity:* 11 inches  
*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—8  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—moderate; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex, upper, south- and west-facing side slopes of mountains  
*Contrasting features:* Bedrock at a depth of 40 to 60 inches; lacks a dark colored surface layer  
*Distinctive present vegetation:* Black sagebrush, singleleaf pinyon

#### Inclusion 2

*Position on landscape:* Random small peaks and ridges of mountains  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

#### Inclusion 3

*Position on landscape:* Upper crests and shoulder slopes of mountains  
*Contrasting features:* Bedrock at a depth of 10 to 20 inches; thick, dark colored surface layer  
*Distinctive present vegetation:* Singleleaf pinyon, Utah juniper

#### Inclusion 4

*Position on landscape:* Rock stringers on side slopes of mountains  
*Contrasting features:* More than 90 percent stones on the surface  
*Distinctive present vegetation:* Barren

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Woodland on the Clanalpine soil:

*Site index for common trees:* Singleleaf pinyon—75; Utah juniper—75

*Most important native understory plants:* Mountain big sagebrush, Idaho fescue, bluegrass, lupine, phlox, arrowleaf balsamroot

### Wildlife habitat elements:

*Suitability of the Punchbowl soil for named elements:*

Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Clanalpine soil for named elements:*

Wild herbaceous plants (nonirrigated)—fair; coniferous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Sumine soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

### Ratings of the Punchbowl Soil for Selected Uses

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

### Ratings of the Clanalpine Soil for Selected Uses

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—large stones

### Ratings of the Sumine Soil for Selected Uses

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### ***Interpretive Groups***

*Capability classification:* Punchbowl soil—VIIIs, nonirrigated; Clanalpine soil—VIIIs, nonirrigated; Sumine soil—VIIIs, nonirrigated

*Range site:* Punchbowl soil—024X030N; Clanalpine soil—025X061N; Sumine soil—024X029N

*Woodland suitability group:* Clanalpine soil—2R

## **2099—Punchbowl-Roca-Rock outcrop association**

### ***Map Unit Setting***

*Position on landscape:* Mountains

*Elevation:* 6,200 to 7,400 feet

*Average annual precipitation:* About 10 inches

*Average annual air temperature:* About 45 degrees F

*Frost-free season:* About 90 days

### ***Composition***

*Major components:*

- Punchbowl very gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy, mixed, frigid—45 percent
- Roca very cobbly loam, 15 to 30 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—25 percent
- Rock outcrop—15 percent

*Contrasting inclusions:*

- Inclusion 1: Lithic Xeric Torriorthents, 30 to 50 percent slopes—Lithic Xeric Torriorthents, loamy-skeletal, carbonatic, frigid—6 percent
- Inclusion 2: Xerollic Durargids, 15 to 30 percent slopes—Xerollic Durargids, loamy, mixed, frigid, shallow—6 percent
- Inclusion 3: Typic Haploxerolls, 30 to 50 percent slopes—Typic Haploxerolls, loamy-skeletal, mixed, frigid—2 percent
- Inclusion 4: Welch loam drained, 2 to 8 percent slopes—Cumulic Haplaquolls, fine-loamy, mixed, frigid—1 percent

### ***Characteristics of the Punchbowl Soil***

*Position on landscape:* Crests, shoulders, and east- and west-facing side slopes of mountains

*Parent material:* Kind—residuum; source—tuff

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Black sagebrush, Sandberg bluegrass, bottlebrush squirreltail, small rabbitbrush, horsebrush

### ***Typical Profile***

0 to 3 inches—very gravelly loam; 5 to 10 percent

cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2

3 to 7 inches—gravelly loam, loam; 0 to 5 percent cobbles and stones and 5 to 35 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL, GC; estimated AASHTO classification—A-6

7 to 11 inches—gravelly clay loam, gravelly sandy clay loam; 0 to 5 percent cobbles and stones and 40 to 50 percent pebbles (by weight); angular blocky structure; hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6, A-7

11 inches—unweathered bedrock

### ***Soil and Water Features***

*Depth to bedrock:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.2 to 1.6 inches

*Water-supplying capacity:* 9 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### ***Characteristics of the Roca Soil***

*Position on landscape:* South-facing side slopes of mountains

*Parent material:* Kind—residuum; source—chert and shale

*Slope features:* Length—long; shape—convex to slightly concave

*Dominant present vegetation:* Mountain big sagebrush, Wyoming big sagebrush, bluegrass, Thurber needlegrass

### ***Typical Profile***

0 to 5 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 15 to 25 percent pebbles

(by weight); platy structure; slightly hard, friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

5 to 27 inches—very gravelly clay loam, very gravelly clay; 0 to 10 percent cobbles and stones and 50 to 70 percent pebbles (by weight); angular blocky structure; hard, firm; mildly alkaline (pH 7.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, SC; estimated AASHTO classification—A-2

27 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 2.9 to 3.6 inches

*Water-supplying capacity:* 11 inches

*Runoff:* Very rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Characteristics of Rock Outcrop

*Position on landscape:* Ridges, knobs, and steep side slopes of mountains

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* None

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Convex side slopes of mountains with exposures of interbedded limestone bedrock

*Contrasting features:* Calcareous throughout the profile

*Distinctive present vegetation:* Black sagebrush

#### Inclusion 2

*Position on landscape:* Foot slopes and lower side slopes of mountains

*Contrasting features:* Hardpan at a depth of 10 to 20 inches

*Distinctive present vegetation:* Mountain big sagebrush

#### Inclusion 3

*Position on landscape:* Concave, north-facing side slopes of mountains

*Contrasting features:* Thick, dark colored surface layer

*Distinctive present vegetation:* Mountain big sagebrush, Idaho fescue

#### Inclusion 4

*Position on landscape:* Intermountain drainageways

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, western wheatgrass, basin wildrye

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Punchbowl soil for named elements:*

Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Roca soil for named elements:* Wild

herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Punchbowl Soil for Selected Uses

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Roca Soil for Selected Uses

*Range seeding:* Poor—large stones

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—slope, depth to bedrock

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

### Interpretive Groups

*Capability classification:* Punchbowl soil—VIIIs, nonirrigated; Roca soil—VIIs, nonirrigated; Rock outcrop—VIIs

*Range site:* Punchbowl soil—024X030N; Roca soil—024X028N

## 2100—Grassval-Grina-Unsel Variant association

### Map Unit Setting

*Position on landscape:* Fan piedmonts and low rolling hills

*Elevation:* 5,300 to 5,600 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

### Composition

*Major components:*

- Grassval gravelly loam, 4 to 8 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—35 percent
  - Grina very gravelly loam, 15 to 50 percent slopes, eroded—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—30 percent
  - Unsel Variant very gravelly loam, 30 to 50 percent slopes—Duric Haplargids, fine-loamy, mixed, mesic—20 percent
- Contrasting inclusions:*
- Inclusion 1: Duric Natrargids, 2 to 8 percent slopes—Duric Natrargids, fine, montmorillonitic, mesic—5 percent
  - Inclusion 2: Durorthidic Torriorthents, 2 to 8 percent slopes—Durorthidic Torriorthents, coarse-loamy, mixed (calcareous), mesic—4 percent
  - Inclusion 3: Xerollic Haplargids, 15 to 50 percent slopes—Xerollic Haplargids, loamy-skeletal, mixed, mesic—3 percent
  - Inclusion 4: Xeric Torriorthents, 30 to 50 percent slopes—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—3 percent

### Characteristics of the Grassval Soil

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—slightly convex

*Dominant present vegetation:* Black sagebrush, small rabbitbrush, bottlebrush squirreltail, shadscale

### Typical Profile

0 to 4 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2, A-4

4 to 13 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 30 to 45

percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6

13 inches—indurated duripan; massive

### Soil and Water Features

*Depth to hardpan:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.6 to 1.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Grina Soil

*Position on landscape:* Side slopes of hills adjacent to fan piedmont remnants

*Parent material:* Kind—residuum; source—tuffaceous, weakly consolidated sediments

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Utah juniper, Wyoming big sagebrush, bottlebrush squirreltail, black sagebrush, singleleaf pinyon

### Typical Profile

0 to 3 inches—very gravelly loam; 0 to 5 percent cobbles and stones and 55 to 70 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GC; estimated AASHTO classification—A-2

3 to 14 inches—loam, silty clay loam, silt loam; 0 to 10 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6, A-7

14 inches—weathered bedrock

### Soil and Water Features

*Depth to bedrock:* 14 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.7 to 2.5 inches  
*Water-supplying capacity:* 6 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Unsel Variant Soil**

*Position on landscape:* Side slopes of hills adjacent to south-facing side slopes of fan piedmont remnants  
*Parent material:* Kind—residuum and colluvium; source—tuffaceous, weakly consolidated sediments  
*Slope features:* Length—short; shape—concave to convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, small rabbitbrush  
*Surface cover:* 45 percent pebbles, 15 percent cobbles

### **Typical Profile**

0 to 2 inches—very gravelly loam; 10 to 15 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2  
 2 to 15 inches—gravelly loam; 30 to 45 percent pebbles (by weight); angular blocky structure; slightly hard, friable; strongly alkaline (pH 8.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SC; estimated AASHTO classification—A-6, A-7  
 15 to 22 inches—gravelly loam; 30 to 45 percent pebbles (by weight); massive; hard, firm; very strongly alkaline (pH 9.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—SM-SC, SC; estimated AASHTO classification—A-4, A-6  
 22 inches—weathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.8 to 3.5 inches  
*Water-supplying capacity:* 7 inches

*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—7  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Lower fan piedmont remnants  
*Contrasting features:* Deep soils that have a clayey subsoil

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Inset fans  
*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 3**

*Position on landscape:* North-facing shoulders and upper side slopes of fan piedmont remnants

*Contrasting features:* Very gravelly subsoil

*Distinctive present vegetation:* Black sagebrush

#### **Inclusion 4**

*Position on landscape:* Eroded side slopes of fan piedmont remnants with a rock core

*Contrasting features:* Bedrock within a depth of 40 inches

*Distinctive present vegetation:* Wyoming big sagebrush, black sagebrush

*Other inclusions (of minor extent):* Rock outcrop occurs in random spots on side slopes of fan piedmont remnants

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Woodland on the Grina soil:**

*Site index for common trees:* Singleleaf pinyon—18; Utah juniper—18

*Most important native understory plants:* Big sagebrush, bluebunch wheatgrass, basin wildrye, Thurber needlegrass, Indian ricegrass, bluegrass, tapertip hawksbeard

#### **Wildlife habitat elements:**

*Suitability of the Grassval soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Grina soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; coniferous

plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Unsel Variant soil for named elements:*

Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### **Ratings of the Grassval Soil for Selected Uses**

*Range seeding:* Poor—droughty, cemented pan

*Daily cover for landfill:* Poor—cemented pan, small stones

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Grina Soil for Selected Uses**

*Range seeding:* Poor—droughty, small stones

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—low strength, slope

*Roadfill:* Poor—depth to bedrock, slope, low strength

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope, depth to bedrock

*Pond reservoir areas:* Severe—slope, depth to bedrock

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Unsel Variant Soil for Selected Uses**

*Range seeding:* Poor—too arid, small stones

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Severe—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Interpretive Groups**

*Capability classification:* Grassval soil—VIIs, nonirrigated; Grina soil—VIIs, nonirrigated; Unsel Variant soil—VIIs, nonirrigated

*Range site:* Grassval soil—024X030N; Grina soil—025X059N; Unsel Variant soil—024X002N

*Woodland suitability group:* Grina soil—1R

### **2104—Grassval-Zineb-Izod association**

#### **Map Unit Setting**

*Position on landscape:* Piedmont slopes

*Elevation:* 5,800 to 6,500 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 47 degrees F

*Frost-free season:* About 105 days

#### **Composition**

*Major components:*

- Grassval very gravelly sandy loam, 4 to 15 percent slopes—Xerollic Durargids, loamy, mixed, mesic, shallow—55 percent
- Zineb gravelly very fine sandy loam, 4 to 15 percent slopes—Durixerollic Camborthids, loamy-skeletal, mixed, mesic—15 percent
- Izod cobbly loam, 30 to 50 percent slopes—Lithic Xeric Torriorthents, loamy-skeletal, carbonatic, mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Durorthidic Xeric Torriorthents, warm, 15 to 50 percent slopes—Durorthidic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—7 percent
- Inclusion 2: Durorthidic Xeric Torriorthents, cool, 15 to 50 percent slopes—Durorthidic Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—5 percent
- Inclusion 3: Xeric Torriorthents, 4 to 15 percent slopes—Xeric Torriorthents, loamy-skeletal, mixed (calcareous), mesic—3 percent

#### **Characteristics of the Grassval Soil**

*Position on landscape:* Summits of fan piedmont remnants overplacing rock pediments

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—smooth to convex

*Dominant present vegetation:* Black sagebrush, bottlebrush squirreltail, ephedra, Utah juniper, singleleaf pinyon

#### **Typical Profile**

- 0 to 4 inches—very gravelly sandy loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2
- 4 to 13 inches—gravelly clay loam, gravelly loam; 0 to 10 percent cobbles and stones and 30 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-6
- 13 inches—indurated duripan; massive

### Soil and Water Features

*Depth to hardpan:* 8 to 14 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.5 to 1.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.15; T value—1; wind erodibility group—5

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Zineb Soil

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—slightly concave

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, bottlebrush squirreltail, pine bluegrass

### Typical Profile

0 to 6 inches—gravelly very fine sandy loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

6 to 13 inches—gravelly very fine sandy loam, gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

13 to 19 inches—very gravelly sandy loam, very gravelly loam; 0 to 10 percent cobbles and stones and 55 to 75 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM; estimated AASHTO classification—A-1

19 to 27 inches—extremely cobbly sandy loam; 50 to 75 percent cobbles and stones or 55 to 85 percent pebbles (by weight); massive; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated

Unified classification—GP-GM, GM; estimated AASHTO classification—A-1

27 to 60 inches or more—extremely cobbly loamy coarse sand, extremely cobbly coarse sand; 50 to 75 percent cobbles and stones or 55 to 85 percent pebbles (by weight); single grained; loose; strongly alkaline (pH 8.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GP, GM-GC; estimated AASHTO classification—A-1

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately rapid

*Available water capacity:* 4.3 to 4.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Medium

*Hydrologic group:* B

*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—4

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### Characteristics of the Izod Soil

*Position on landscape:* Side slopes of rock pediment remnants

*Parent material:* Kind—residuum; source—interbedded shale and limestone

*Slope features:* Length—short; shape—concave to convex

*Dominant present vegetation:* Black sagebrush, small rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

### Typical Profile

0 to 4 inches—cobbly loam; 15 to 30 percent cobbles and stones and 10 to 30 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, SM, CL-ML, ML; estimated AASHTO classification—A-4

4 to 10 inches—very gravelly loam, extremely gravelly loam; 0 to 25 percent cobbles and stones and 50 to 85 percent pebbles (by weight); massive; slightly hard, very friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, GM; estimated AASHTO classification—A-2

10 inches—unweathered bedrock

**Soil and Water Features**

*Depth to bedrock:* 7 to 14 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 0.4 to 0.5 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

**Contrasting Inclusions****Inclusion 1**

*Position on landscape:* Colluvial side slopes of rock pediment remnants  
*Contrasting features:* Lower water-supplying capacity  
*Distinctive present vegetation:* Black sagebrush, small rabbitbrush

**Inclusion 2**

*Position on landscape:* Higher elevation summits and north-facing side slopes of rock pediment remnants  
*Contrasting features:* Higher water-supplying capacity  
*Distinctive present vegetation:* Singleleaf pinyon, Utah juniper

**Inclusion 3**

*Position on landscape:* Areas adjacent to concave channels of inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

**Major Uses**

**Current uses:** Rangeland, wildlife habitat

**Wildlife habitat elements:**

*Suitability of the Grassval soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Zineb soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Izod soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

**Ratings of the Grassval Soil for Selected Uses**

*Range seeding:* Poor—droughty, cemented pan, small stones

*Daily cover for landfill:* Poor—cemented pan, small stones

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Ratings of the Zineb Soil for Selected Uses**

*Range seeding:* Fair—droughty

*Daily cover for landfill:* Poor—small stones, too sandy

*Shallow excavations:* Severe—cutbanks cave

*Local roads and streets:* Moderate—frost action, large stones, slope

*Roadfill:* Fair—large stones

*Sand:* Improbable source—excess fines, large stones

*Gravel:* Improbable source—excess fines, large stones

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—large stones

**Ratings of the Izod Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—thin layer

**Interpretive Groups**

*Capability classification:* Grassval soil—VIIs, nonirrigated; Zineb soil—IVe, irrigated, and VIIs, nonirrigated; Izod soil—VIIs, nonirrigated

*Range site:* Grassval soil—024X030N; Zineb soil—024X005N; Izod soil—024X030N

**2521—Stingdorn very cobbly loam, 4 to 30 percent slopes****Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,200 to 5,800 feet

*Average annual precipitation:* About 7 inches

*Average annual air temperature:* About 49 degrees F

*Frost-free season:* About 110 days

### Composition

#### Major components:

- Stingdorn very cobbly loam, 4 to 30 percent slopes—Typic Durargids, loamy-skeletal, mixed, mesic, shallow—85 percent

#### Contrasting inclusions:

- Inclusion 1: Xerollic Durargids, 4 to 15 percent slopes—Xerollic Durargids, loamy-skeletal, mixed, mesic, shallow—8 percent
- Inclusion 2: Chiara cobbly loam, 2 to 8 percent—Xerollic Durorthids, loamy, mixed, mesic, shallow—5 percent
- Inclusion 3: Rock outcrop—2 percent

### Characteristics of the Stingdorn Soil

*Position on landscape:* Crests, shoulders, and side slopes of foothills

*Parent material:* Kind—residuum; source—ash flow tuffs

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Shadscale, bud sagebrush, small rabbitbrush, littleleaf horsebrush, bottlebrush squirreltail

*Surface cover:* 5 percent pebbles, 40 percent cobbles

### Typical Profile

0 to 7 inches—very cobbly loam; 30 to 50 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2, A-4

7 to 15 inches—very cobbly clay loam; 30 to 50 percent cobbles and stones and 35 to 50 percent pebbles (by weight); angular blocky structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 13); estimated Unified classification—GC; estimated AASHTO classification—A-6

15 to 20 inches—indurated duripan; massive

20 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 8 to 20 inches

*Depth to bedrock:* 8 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.5 to 1.9 inches

*Water-supplying capacity:* 6 inches

*Runoff:* Medium or rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.10; T value—1; wind erodibility group—7

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave, north-facing side slopes of foothills

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush, pine bluegrass, small rabbitbrush

#### Inclusion 2

*Position on landscape:* Interhill fans adjacent to foothills

*Contrasting features:* Higher water-supplying capacity

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

#### Inclusion 3

*Position on landscape:* Random small peaks and ridges of foothills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### Major Uses

*Current uses:* Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

#### Ratings of the Soil for Selected Uses

*Range seeding:* Poor—too arid, droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

*Shallow excavations:* Severe—depth to bedrock, cemented pan, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, large stones, cemented pan

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—large stones

### Interpretive Groups

*Capability classification:* VIIs, nonirrigated

*Range site:* 024X002N

**2522—Stingdorn-Stingdorn, steep-Colbar association****Map Unit Setting***Position on landscape:* Foothills*Elevation:* 5,000 to 5,500 feet*Average annual precipitation:* About 8 inches*Average annual air temperature:* About 48 degrees F*Frost-free season:* About 110 days**Composition***Major components:*

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Colbar Soil**

*Position on landscape:* North-facing side slopes of foothills

*Parent material:* Kind—colluvium over residuum; source—ash flow tuffs

*Slope features:* Length—long; shape—slightly convex

*Dominant present vegetation:* Wyoming big sagebrush, small rabbitbrush, spiny hopsage, pine bluegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 3 inches—very cobbly loam; 50 to 60 percent cobbles and stones and 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

3 to 22 inches—cobbly loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

22 to 26 inches—gravelly loam, cobbly loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.3 to 3.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.10; T value—2; wind erodibility group—8

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Slightly concave foot slopes of foothills

*Contrasting features:* Sodium-affected layer of clay accumulation

*Distinctive present vegetation:* Shadscale, bud sagebrush

#### **Inclusion 2**

*Position on landscape:* Adjacent concave alluvial fans

*Contrasting features:* Very deep soil

*Distinctive present vegetation:* Wyoming big sagebrush, Indian ricegrass

#### **Inclusion 3**

*Position on landscape:* Crests and eroded side slopes of foothills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Stingdorn soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Stingdorn, steep, soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Stingdorn Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

*Shallow excavations:* Severe—depth to bedrock, cemented pan, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, large stones, cemented pan

*Pond reservoir areas:* Severe—depth to bedrock, cemented pan, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Stingdorn, Steep, Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty, large stones

*Daily cover for landfill:* Poor—depth to bedrock, large stones, slope

### **2530—Perwick-Puett-Tulase association**

#### **Map Unit Setting**

*Position on landscape:* Foothills

*Elevation:* 5,200 to 6,000 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

#### **Composition**

*Major components:*

- Perwick very gravelly loam, 15 to 50 percent slopes,

eroded—Xeric Torriorthents, coarse-loamy, mixed (calcareous), mesic—40 percent

- Puett gravelly loam, 15 to 50 percent slopes, eroded—Xeric Torriorthents, loamy, mixed (calcareous), mesic, shallow—30 percent

- Tulase silt loam, 2 to 8 percent slopes—Durorthidic Xeric Torriorthents, coarse-silty, mixed (calcareous), mesic—15 percent

*Contrasting inclusions:*

- Inclusion 1: Pineval gravelly loam, 4 to 15 percent slopes—Durixerollic Haplargids, loamy-skeletal, mixed, mesic—10 percent

- Inclusion 2: Rock outcrop—5 percent

#### **Characteristics of the Perwick Soil**

*Position on landscape:* Mid and lower side slopes of foothills

*Parent material:* Kind—residuum; source—tuffaceous sedimentary rocks

*Slope features:* Length—short; shape—slightly convex to slightly concave

*Dominant present vegetation:* Utah juniper, Wyoming big sagebrush, black sagebrush, small rabbitbrush

#### **Typical Profile**

- 0 to 3 inches—very gravelly loam; 50 to 60 percent pebbles (by weight); granular structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-2
- 3 to 16 inches—gravelly sandy loam, gravelly loam, gravelly silt loam; 25 to 50 percent pebbles (by weight); granular structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4
- 16 to 26 inches—fine sandy loam, sandy loam, loam; 10 to 20 percent pebbles (by weight); massive; very hard, very firm; very strongly alkaline (pH 9.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—SM, ML; estimated AASHTO classification—A-2, A-4
- 26 inches—weathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderate

*Available water capacity:* 3.2 to 3.9 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.15; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—moderate  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Puett Soil**

*Position on landscape:* Eroded, upper side slopes of foothills  
*Parent material:* Kind—residuum; source—weathered tuff and semiconsolidated lake sediments  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Black sagebrush, Wyoming big sagebrush, Indian ricegrass, Utah juniper

### **Typical Profile**

0 to 3 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 45 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC; estimated AASHTO classification—A-4  
 3 to 10 inches—coarse sandy loam, gravelly sandy loam, loam; 10 to 50 percent pebbles (by weight); massive; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML, GM; estimated AASHTO classification—A-1, A-2, A-4  
 10 inches—weathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 1.2 to 1.6 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Tulase Soil**

*Position on landscape:* Inset fans

*Parent material:* Mixed alluvium influenced by loess and volcanic ash

*Slope features:* Length—short; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, basin wildrye, Sandberg bluegrass

### **Typical Profile**

0 to 6 inches—silt loam; platy structure; soft, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4  
 6 to 60 inches or more—silt loam, very fine sandy loam; massive; slightly hard, very friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4

### **Soil and Water Features**

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderate  
*Available water capacity:* 8.8 to 12.2 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Medium  
*Hydrologic group:* B  
*Erosion factors (surface layer):* K value—.55; T value—5; wind erodibility group—4L  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Adjacent fan piedmont remnants  
*Contrasting features:* Very deep  
*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Crests and eroded side slopes of foothills  
*Contrasting features:* Bedrock exposed at the soil surface  
*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

### **Woodland on the Perwick soil:**

*Site index for common trees:* Utah juniper—18  
*Most important native understory plants:* Wyoming big sagebrush, bluebunch wheatgrass, basin wildrye, Thurber needlegrass, Indian ricegrass, bluegrass

**Woodland on the Puett soil:**

*Site index for common trees:* Utah juniper—18

*Most important native understory plants:* Wyoming big sagebrush, antelope bitterbrush, bottlebrush squirreltail, Indian ricegrass, bluegrass

**Wildlife habitat elements:**

*Suitability of the Perwick soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; coniferous plants (nonirrigated)—poor; shrubs (nonirrigated)—fair

*Suitability of the Puett soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; coniferous plants (nonirrigated)—very poor; shrubs (nonirrigated)—poor

*Suitability of the Tulase soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

**Ratings of the Perwick Soil for Selected Uses**

*Range seeding:* Poor—small stones

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—depth to bedrock, slope

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, slope

*Pond reservoir areas:* Severe—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

**Ratings of the Puett Soil for Selected Uses**

*Range seeding:* Poor—droughty, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—slope

*Roadfill:* Poor—slope, depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stones, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—seepage, piping

**Ratings of the Tulase Soil for Selected Uses**

*Range seeding:* Fair—too arid

*Daily cover for landfill:* Good

*Shallow excavations:* Slight

*Local roads and streets:* Moderate—frost action

*Roadfill:* Good

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Good

*Pond reservoir areas:* Moderate—seepage, slope

*Embankments, dikes, and levees:* Severe—piping

**Interpretive Groups**

*Capability classification:* Perwick soil—VIIIs, nonirrigated; Puett soil—VIIe, nonirrigated; Tulase soil—IIIe, irrigated, and VIc, nonirrigated

*Range site:* Perwick soil—025X059N; Puett soil—025X059N; Tulase soil—024X005N

*Woodland suitability group:* Perwick soil—1R; Puett soil—1R

**2540—Buffaran-Wieland association****Map Unit Setting**

*Position on landscape:* Fan piedmonts

*Elevation:* 5,700 to 6,300 feet

*Average annual precipitation:* About 9 inches

*Average annual air temperature:* About 48 degrees F

*Frost-free season:* About 110 days

**Composition**

*Major components:*

- Buffaran cobbly loam, 2 to 8 percent slopes—Xerollic Durargids, clayey, montmorillonitic, mesic, shallow—50 percent
- Wieland gravelly loam, 8 to 15 percent slopes—Durixerollic Haplargids, fine, montmorillonitic, mesic—40 percent

*Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 4 to 8 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—6 percent
- Inclusion 2: Xerollic Haplargids, 2 to 8 percent slopes—Xerollic Haplargids, fine, montmorillonitic, mesic—4 percent

**Characteristics of the Buffaran Soil**

*Position on landscape:* Summits and shoulder slopes of fan piedmont remnants

*Parent material:* Mixed alluvium

*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

*Surface cover:* 25 percent pebbles, 5 percent cobbles

**Typical Profile**

0 to 4 inches—cobbly loam; 15 to 30 percent cobbles and stones and 15 to 25 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL; estimated AASHTO classification—A-6

- 4 to 15 inches—gravelly clay loam, gravelly clay, clay; 0 to 5 percent cobbles and stones and 15 to 30 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7
- 15 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### Soil and Water Features

*Depth to hardpan:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.6 to 2.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Characteristics of the Wieland Soil

*Position on landscape:* Side slopes of fan piedmont remnants  
*Parent material:* Mixed alluvium influenced by loess and volcanic ash  
*Slope features:* Length—short; concave to convex  
*Dominant present vegetation:* Wyoming big sagebrush, Douglas rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

### Typical Profile

- 0 to 8 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 50 percent pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.0); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL, SC; estimated AASHTO classification—A-6
- 8 to 20 inches—gravelly clay, clay; 0 to 5 percent cobbles and stones and 25 to 45 percent pebbles (by weight); prismatic structure; hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CH, SC; estimated AASHTO classification—A-7
- 20 to 60 inches or more—loam, gravelly loam, gravelly sandy loam; 0 to 5 percent cobbles and stones and 10 to 45 percent pebbles (by weight); massive;

hard, firm; strongly alkaline (pH 8.6); nonsaline to slightly saline (2 to 8 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—CL-ML, SM-SC; estimated AASHTO classification—A-4, A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 5.7 to 9.2 inches  
*Water-supplying capacity:* 9 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.32; T value—5; wind erodibility group—6  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave to smooth inset fans  
*Contrasting features:* Very deep soils, loamy and gravelly throughout the profile  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Foot slopes of fan piedmont remnants  
*Contrasting features:* Very stony surface layer  
*Distinctive present vegetation:* Wyoming big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Buffaran soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Wieland soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Buffaran Soil for Selected Uses

*Range seeding:* Poor—droughty, rooting depth  
*Daily cover for landfill:* Poor—cemented pan, hard to pack  
*Shallow excavations:* Severe—cemented pan  
*Local roads and streets:* Severe—cemented pan, low strength  
*Roadfill:* Poor—low strength, cemented pan  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan  
*Embankments, dikes, and levees:* Severe—thin layer

### **Ratings of the Wieland Soil for Selected Uses**

*Range seeding:* Poor—rooting depth  
*Daily cover for landfill:* Fair—small stones, slope  
*Shallow excavations:* Moderate—too clayey, slope  
*Local roads and streets:* Severe—low strength, shrink-swell  
*Roadfill:* Good  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—small stones, area reclaim  
*Pond reservoir areas:* Severe—slope  
*Embankments, dikes, and levees:* Moderate—thin layer

### **Interpretive Groups**

*Capability classification:* Buffaran soil—VIIs, nonirrigated; Wieland soil—VIs, nonirrigated  
*Range site:* Buffaran soil—024X005N; Wieland soil—024X005N

## **2541—Buffaran-Zoesta association**

### **Map Unit Setting**

*Position on landscape:* Fan piedmonts  
*Elevation:* 6,200 to 6,800 feet  
*Average annual precipitation:* About 10 inches  
*Average annual air temperature:* About 46 degrees F  
*Frost-free season:* About 100 days

### **Composition**

#### **Major components:**

- Buffaran gravelly loam, 4 to 8 percent slopes, very stony—Xerollic Durargids, clayey, montmorillonitic, mesic, shallow—60 percent
- Zoesta cobbly loam, 8 to 15 percent slopes—Xerollic Paleargids, fine, montmorillonitic, frigid—25 percent

#### **Contrasting inclusions:**

- Inclusion 1: Xerollic Haplargids, 30 to 50 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—7 percent
- Inclusion 2: Xerollic Camborthids, 4 to 15 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—5 percent
- Inclusion 3: Xerollic Haplargids, 4 to 15 percent slopes—Xerollic Haplargids, clayey-skeletal, montmorillonitic, frigid—3 percent

### **Characteristics of the Buffaran Soil**

*Position on landscape:* Summits and shoulder slopes of lower fan piedmont remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, downy rabbitbrush, Sandberg bluegrass, bottlebrush squirreltail

### **Typical Profile**

0 to 4 inches—gravelly loam; 5 to 15 percent cobbles and stones and 20 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SC, CL; estimated AASHTO classification—A-6  
 4 to 15 inches—gravelly clay loam, gravelly clay, clay; 0 to 5 percent cobbles and stones and 15 to 30 percent pebbles (by weight); prismatic structure; hard, firm; mildly alkaline (pH 7.6); nonsaline (less than 4 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7  
 15 to 60 inches or more—indurated duripan; massive; extremely hard, extremely firm

### **Soil and Water Features**

*Depth to hardpan:* 14 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Slow  
*Available water capacity:* 1.6 to 2.2 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Slow  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.32; T value—1; wind erodibility group—7  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* High  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Zoesta Soil**

*Position on landscape:* Summits of higher fan piedmont remnants  
*Parent material:* Mixed alluvium  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Low sagebrush, Sandberg bluegrass, downy rabbitbrush

### **Typical Profile**

0 to 7 inches—cobbly loam; 25 to 40 percent cobbles and stones and 10 to 25 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML, ML; estimated AASHTO classification—A-4

7 to 23 inches—clay; 0 to 10 percent cobbles and stones and 5 to 15 percent pebbles (by weight); prismatic structure; very hard, very firm; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL, CH; estimated AASHTO classification—A-7

23 to 31 inches—gravelly clay loam, gravelly clay; 30 to 45 percent pebbles (by weight); prismatic structure; very hard, very firm; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC, CL; estimated AASHTO classification—A-6, A-7

31 to 60 inches—very gravelly clay loam, very gravelly loam; 55 to 70 percent pebbles (by weight); massive; very hard, very firm; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 5); estimated Unified classification—GC; estimated AASHTO classification—A-2

### Soil and Water Features

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Very slow

*Available water capacity:* 7.9 to 9.1 inches

*Water-supplying capacity:* 10 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.20; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* High

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Slightly concave side slopes of fan piedmont remnants

*Contrasting features:* Slopes of 30 to 50 percent

*Distinctive present vegetation:* Big sagebrush

#### Inclusion 2

*Position on landscape:* Narrow inset fans

*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Basin big sagebrush, basin wildrye

#### Inclusion 3

*Position on landscape:* Shoulder slopes of upper fan piedmont remnants

*Contrasting features:* Very gravelly layer of clay accumulation

*Distinctive present vegetation:* Wyoming big sagebrush, mountain big sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Buffaran soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Zoesta soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### Ratings of the Buffaran Soil for Selected Uses

*Range seeding:* Poor—droughty, rooting depth

*Daily cover for landfill:* Poor—cemented pan, hard to pack

*Shallow excavations:* Severe—cemented pan

*Local roads and streets:* Severe—cemented pan, low strength

*Roadfill:* Poor—low strength, cemented pan

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan

*Embankments, dikes, and levees:* Severe—thin layer

#### Ratings of the Zoesta Soil for Selected Uses

*Range seeding:* Poor—rooting depth

*Daily cover for landfill:* Poor—small stones

*Shallow excavations:* Moderate—too clayey, slope

*Local roads and streets:* Severe—low strength, shrink-swell

*Roadfill:* Fair—shrink-swell

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—small stones, area reclaim

*Pond reservoir areas:* Severe—slope

*Embankments, dikes, and levees:* Slight

### Interpretive Groups

*Capability classification:* Buffaran soil—VIIs, nonirrigated; Zoesta soil—IVs, irrigated, and VIIs, nonirrigated

*Range site:* Buffaran soil—024X005N; Zoesta soil—024X018N

## 2550—Laped-Old Camp-Colbar association

### Map Unit Setting

*Position on landscape:* Hills

*Elevation:* 5,200 to 6,000 feet

*Average annual precipitation:* About 8 inches

*Average annual air temperature:* About 47 degrees F  
*Frost-free season:* About 105 days

### **Composition**

#### *Major components:*

- Laped gravelly loam, 4 to 15 percent slopes—Typic Durargids, loamy, mixed, mesic, shallow—30 percent
- Old Camp gravelly loam, 15 to 30 percent slopes—Lithic Xerollic Haplargids, loamy-skeletal, mixed, mesic—30 percent
- Colbar gravelly loam, 15 to 30 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—25 percent

#### *Contrasting inclusions:*

- Inclusion 1: Xerollic Camborthids, 8 to 15 percent slopes—Xerollic Camborthids, loamy-skeletal, mixed, mesic—8 percent
- Inclusion 2: Rock outcrop—7 percent

### **Characteristics of the Laped Soil**

*Position on landscape:* Crests and shoulder slopes of hills

*Parent material:* Kind—residuum and colluvium; source—rhyolitic rocks

*Slope features:* Length—short; shape—convex to smooth

*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Sandberg bluegrass

#### **Typical Profile**

0 to 6 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4

6 to 18 inches—gravelly loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC, SC; estimated AASHTO classification—A-6, A-7

18 to 23 inches—indurated duripan; massive  
 23 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to hardpan:* 14 to 20 inches

*Depth to bedrock:* 20 to 30 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 2.3 to 2.7 inches

*Water-supplying capacity:* 7 inches

*Runoff:* Medium

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—slight; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Low

### **Characteristics of the Old Camp Soil**

*Position on landscape:* South-facing side slopes of hills

*Parent material:* Kind—residuum influenced by volcanic ash; source—rhyolitic tuff

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Sandberg bluegrass, bottlebrush squirreltail

#### **Typical Profile**

0 to 2 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC; estimated AASHTO classification—A-4

2 to 14 inches—very stony clay loam, very cobbly clay loam, extremely stony sandy clay loam; 35 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6

14 inches—unweathered bedrock

#### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 1.1 to 1.5 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* D

*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Low

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Characteristics of the Colbar Soil**

*Position on landscape:* North-facing side slopes of hills

*Parent material:* Kind—residuum and colluvium;  
source—rhyolitic rocks

*Slope features:* Length—long; shape—convex

*Dominant present vegetation:* Wyoming big sagebrush,  
spiny hopsage, Sandberg bluegrass, bottlebrush  
squirreltail

### **Typical Profile**

0 to 3 inches—gravelly loam; 0 to 5 percent cobbles and stones and 25 to 40 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, GM-GC, SM, GM; estimated AASHTO classification—A-4

3 to 22 inches—cobble loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

22 to 26 inches—gravelly loam, cobble loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

26 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 20 to 40 inches

*Depth to seasonal high water table:* More than 60 inches

*Frequency of flooding:* None

*Permeability:* Moderately slow

*Available water capacity:* 3.3 to 3.8 inches

*Water-supplying capacity:* 8 inches

*Runoff:* Rapid

*Hydrologic group:* C

*Erosion factors (surface layer):* K value—.24; T value—2; wind erodibility group—6

*Hazard of erosion:* By water—moderate; by wind—slight

*Shrink-swell potential:* Moderate

*Corrosivity:* To steel—high; to concrete—low

*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Foot slopes of hills

*Contrasting features:* Bedrock at a depth of more than 40 inches

*Distinctive present vegetation:* Wyoming big sagebrush, spiny hopsage

#### **Inclusion 2**

*Position on landscape:* Rimrock on shoulder slopes of hills and scattered small peaks

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

### **Major Uses**

**Current uses:** Rangeland, wildlife habitat

#### **Wildlife habitat elements:**

*Suitability of the Laped soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

*Suitability of the Old Camp soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair

#### **Ratings of the Laped Soil for Selected Uses**

*Range seeding:* Poor—too arid, droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones

*Shallow excavations:* Severe—depth to bedrock, cemented pan

*Local roads and streets:* Severe—cemented pan

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—cemented pan, small stones

*Pond reservoir areas:* Severe—cemented pan, slope

*Embankments, dikes, and levees:* Severe—thin layer

#### **Ratings of the Old Camp Soil for Selected Uses**

*Range seeding:* Poor—droughty

*Daily cover for landfill:* Poor—depth to bedrock, small stones, slope

*Shallow excavations:* Severe—depth to bedrock, slope

*Local roads and streets:* Severe—depth to bedrock, slope

*Roadfill:* Poor—depth to bedrock

*Sand:* Improbable source—excess fines

*Gravel:* Improbable source—excess fines

*Topsoil:* Poor—depth to bedrock, small stone, slope

*Pond reservoir areas:* Severe—depth to bedrock, slope

*Embankments, dikes, and levees:* Severe—large stones

#### **Ratings of the Colbar Soil for Selected Uses**

*Range seeding:* Fair—droughty, large stones, erodes easily

*Daily cover for landfill:* Poor—depth to bedrock, slope, large stones

*Shallow excavations:* Severe—depth to bedrock, slope  
*Local roads and streets:* Severe—slope  
*Roadfill:* Poor—depth to bedrock  
*Sand:* Improbable source—excess fines  
*Gravel:* Improbable source—excess fines  
*Topsoil:* Poor—slope, small stones  
*Pond reservoir areas:* Severe—seepage, slope  
*Embankments, dikes, and levees:* Severe—thin layer

### **Interpretive Groups**

*Capability classification:* Laped soil—VIIIs, nonirrigated;  
 Old Camp soil—VIIIs, nonirrigated; Colbar soil—VIIe,  
 nonirrigated  
*Range site:* Laped soil—024X002N; Old Camp soil—  
 027X007N; Colbar soil—027X007N

## **2551—Laped-Colbar-Osoll association**

### **Map Unit Setting**

*Position on landscape:* Hills  
*Elevation:* 5,00 to 6,000 feet  
*Average annual precipitation:* About 8 inches  
*Average annual air temperature:* About 49 degrees F  
*Frost-free season:* About 110 days

### **Composition**

#### *Major components:*

- Laped gravelly loam, 8 to 15 percent slopes—Typic Durargids, loamy, mixed, mesic, shallow—35 percent
- Colbar cobbly loam, 8 to 15 percent slopes—Xerollic Haplargids, fine-loamy, mixed, mesic—30 percent
- Osoll gravelly loam, 2 to 8 percent slopes—Typic Durorthids, loamy-skeletal, mixed, mesic, shallow—20 percent

#### *Contrasting inclusions:*

- Inclusion 1: Xerollic Durorthids, 2 to 8 percent slopes—Xerollic Durorthids, loamy-skeletal, mixed, mesic—8 percent
- Inclusion 2: Durixerollic Camborthids, 2 to 8 percent slopes—Durixerollic Camborthids, fine-loamy, mixed, mesic—4 percent
- Inclusion 3: Beoska very fine sandy loam, 2 to 8 percent slopes—Duric Natrargids, fine-loamy, mixed, mesic—3 percent

### **Characteristics of the Laped Soil**

*Position on landscape:* Crests, shoulders, and south-facing side slopes of hills  
*Parent material:* Kind—residuum; source—rhyolitic tuff and andesite  
*Slope features:* Length—short; shape—convex  
*Dominant present vegetation:* Shadscale, bud sagebrush, Indian ricegrass, bottlebrush squirreltail  
*Surface cover:* 30 percent pebbles

### **Typical Profile**

0 to 6 inches—gravelly loam; 0 to 5 percent cobbles and stones and 30 to 45 percent pebbles (by weight); platy structure; slightly hard, very friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 4); estimated Unified classification—GM-GC, SM-SC; estimated AASHTO classification—A-4  
 6 to 18 inches—gravelly clay loam; 0 to 10 percent cobbles and stones and 25 to 45 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GC, SC; estimated AASHTO classification—A-6, A-7  
 18 to 23 inches—indurated duripan; massive  
 23 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to hardpan:* 14 to 30 inches  
*Depth to bedrock:* 20 to 30 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 2.3 to 2.7 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.24; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### **Characteristics of the Colbar Soil**

*Position on landscape:* North-facing side slopes of hills  
*Parent material:* Kind—colluvium and residuum; source—rhyolitic and andesitic tuffs  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, bottlebrush squirreltail

### **Typical Profile**

0 to 3 inches—cobbly loam; 35 to 45 percent cobbles and stones and 5 to 15 percent pebbles (by weight); platy structure; soft, very friable; mildly alkaline (pH 7.6); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL-ML; estimated AASHTO classification—A-4  
 3 to 22 inches—cobbly loam, gravelly clay loam; 10 to 35 percent cobbles and stones and 15 to 30 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; mildly alkaline (pH

7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—CL; estimated AASHTO classification—A-6

22 to 26 inches—gravelly loam, cobbly loam; 5 to 30 percent cobbles and stones and 10 to 40 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; moderately alkaline (pH 8.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM-SC, CL-ML; estimated AASHTO classification—A-4

26 inches—unweathered bedrock

### Soil and Water Features

*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 3.3 to 3.8 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Medium  
*Hydrologic group:* C  
*Erosion factors (surface layer):* K value—.17; T value—2; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Moderate  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### Characteristics of the Osoll Soil

*Position on landscape:* Lower side slopes of hills  
*Parent material:* Kind—residuum and colluvium influenced by loess; source—andesite, dacite, and rhyolitic tuff  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Shadscale, bud sagebrush, bottlebrush squirreltail, Indian ricegrass  
*Surface cover:* 30 percent pebbles

### Typical Profile

0 to 5 inches—gravelly loam; 25 to 45 percent pebbles (by weight); platy structure; slightly hard, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM-GC, CL-ML; estimated AASHTO classification—A-4

5 to 12 inches—very gravelly loam, very gravelly fine sandy loam; 10 to 25 percent cobbles and stones and 50 to 75 percent pebbles (by weight); subangular blocky structure; slightly hard, friable; strongly alkaline (pH 8.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 10); estimated Unified classification—GM-GC; estimated AASHTO classification—A-2

12 to 35 inches—indurated duripan; platy structure; extremely hard, extremely firm  
 35 inches—unweathered bedrock

### Soil and Water Features

*Depth to hardpan:* 8 to 14 inches  
*Depth to bedrock:* 20 to 40 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 0.9 to 1.3 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Medium  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—6  
*Hazard of erosion:* By water—slight; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Low

### Contrasting Inclusions

#### Inclusion 1

*Position on landscape:* Concave, north-facing foot slopes of hills  
*Contrasting features:* Duripan at a depth of 20 to 40 inches  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 2

*Position on landscape:* Concave inset fans  
*Contrasting features:* Receives additional moisture from runoff  
*Distinctive present vegetation:* Wyoming big sagebrush

#### Inclusion 3

*Position on landscape:* Adjacent smooth fan piedmont remnants  
*Contrasting features:* Layer of sodium-affected clay accumulation  
*Distinctive present vegetation:* Shadscale, bud sagebrush

### Major Uses

**Current uses:** Rangeland, wildlife habitat

#### Wildlife habitat elements:

*Suitability of the Laped soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor  
*Suitability of the Colbar soil for named elements:* Wild herbaceous plants (nonirrigated)—fair; shrubs (nonirrigated)—fair  
*Suitability of the Osoll soil for named elements:* Wild herbaceous plants (nonirrigated)—poor; shrubs (nonirrigated)—poor

### **Characteristics of the Old Camp Soil**

*Position on landscape:* North-facing side slopes of hills  
*Parent material:* Kind—very gravelly residuum and colluvium; source—rhyolitic ash flow tuffs  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Wyoming big sagebrush, spiny hopsage, Indian ricegrass

### **Typical Profile**

0 to 2 inches—very gravelly fine sandy loam; 5 to 10 percent cobbles and stones and 50 to 65 percent pebbles (by weight); platy structure; slightly hard, very friable; neutral (pH 7.2); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GM; estimated AASHTO classification—A-1, A-2  
 2 to 14 inches—very cobbly clay loam; 35 to 50 percent cobbles and stones and 50 to 65 percent pebbles (by weight); angular blocky structure; slightly hard, friable; mildly alkaline (pH 7.8); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—GC; estimated AASHTO classification—A-2, A-6  
 14 inches—unweathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately slow  
*Available water capacity:* 1.1 to 1.5 inches  
*Water-supplying capacity:* 8 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.17; T value—1; wind erodibility group—5  
*Hazard of erosion:* By water—moderate; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Characteristics of the Puett Soil**

*Position on landscape:* Eroded, south-facing side slopes of hills  
*Parent material:* Kind—residuum; source—tuffaceous, weakly consolidated sediments  
*Slope features:* Length—long; shape—concave  
*Dominant present vegetation:* Black sagebrush, small rabbitbrush, bottlebrush squirreltail, Wyoming big sagebrush

### **Typical Profile**

0 to 4 inches—fine sandy loam; 5 to 15 pebbles (by weight); platy structure; soft, very friable; moderately alkaline (pH 8.3); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM; estimated AASHTO classification—A-4  
 4 to 15 inches—coarse sandy loam, sandy loam, fine sandy loam; 5 to 25 percent pebbles (by weight); massive; soft, friable; moderately alkaline (pH 8.4); nonsaline (less than 2 mmhos/cm); nonsodic (SAR less than 2); estimated Unified classification—SM, ML; estimated AASHTO classification—A-1, A-2, A-4  
 15 inches—weathered bedrock

### **Soil and Water Features**

*Depth to bedrock:* 10 to 20 inches  
*Depth to seasonal high water table:* More than 60 inches  
*Frequency of flooding:* None  
*Permeability:* Moderately rapid  
*Available water capacity:* 1.8 to 2.2 inches  
*Water-supplying capacity:* 7 inches  
*Runoff:* Rapid  
*Hydrologic group:* D  
*Erosion factors (surface layer):* K value—.28; T value—1; wind erodibility group—3  
*Hazard of erosion:* By water—severe; by wind—slight  
*Shrink-swell potential:* Low  
*Corrosivity:* To steel—high; to concrete—low  
*Potential frost action:* Moderate

### **Contrasting Inclusions**

#### **Inclusion 1**

*Position on landscape:* Alluvial fans adjacent to hills  
*Contrasting features:* Receives additional moisture from runoff

*Distinctive present vegetation:* Wyoming big sagebrush

#### **Inclusion 2**

*Position on landscape:* Rimrock and eroded side slopes of hills

*Contrasting features:* Bedrock exposed at the soil surface

*Distinctive present vegetation:* Barren

**Inclusion 3**

*Position on landscape:* Convex, eroded areas on shoulders and side slopes of hills

*Contrasting features:* Soft bedrock at a depth of 10 to 20 inches
